# Preface to the 8th Edition

I wrote the first edition of *Medical Terminology: A Short Course* almost 30 years ago with the hope that it would fill a specific niche in the education of allied health professionals. My goal was to present a comprehensive introduction and overview of medical terminology in a straightforward and easy manner for students who had no previous background in biology or medicine.

It is gratifying to know that this book is now widely used in colleges, career schools, universities, hospitals, and other medical settings in the United States and abroad, where allied health workers use medical language and interpret it for patients and their families. There is no doubt that the method used in *Medical Terminology:*

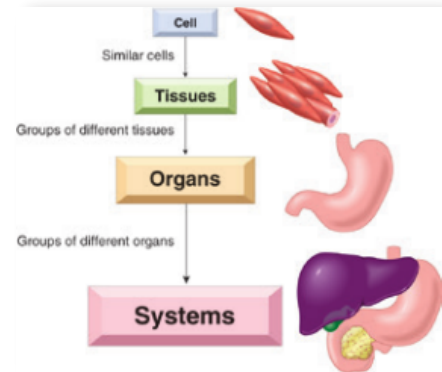

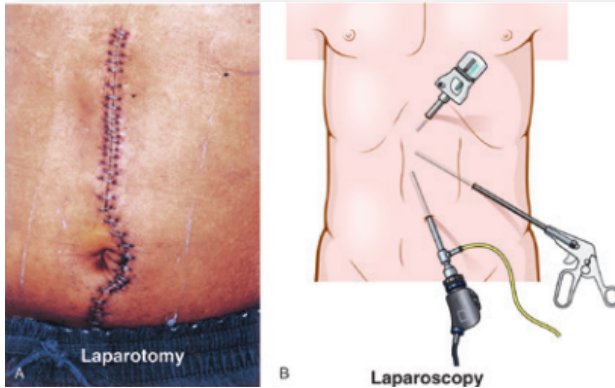

*A Short Course* takes potentially complicated subject matter and makes it manageable and understandable. In this eighth edition, the text has been updated and carefully reviewed for clarity, simplicity, and practicality, but its essential elements remain. Here are its important features:

**WORKBOOK-TEXT FORMAT.** In this book, you learn by doing. On nearly every page you are writing and interacting with medical terminology. You complete exercises (and check your answers), label diagrams, test your understanding with review sheets, and practice pronunciation. The best path to success is to write terms and their meanings as you test yourself. I really believe this method of learning will work for you!

**EASY TO READ AND UNDERSTAND.** Explanations of terms are worded simply and clearly, and repetition reinforces learning throughout the text. Answers to questions are located easily so that you can check and correct your responses while gaining additional explanation of terminology.

**DYNAMIC ILLUSTRATIONS AND PHOTOGRAPHS.** Medical terms come alive with images on nearly every page! Learning is reinforced by seeing parts of the body, diseases, conditions and real medical procedures. At the end of each chapter, “Picture Shows” highlight key images and allow you to apply your knowledge of terminology.

**INTRODUCTION TO BODY SYSTEMS.** The Body Systems Resource, beginning on [page 215](#), begins with the following five sections:

- **Anatomy**—shows full-color images of each body system, labeled for easy reference with combining forms for each body part.
- **Terminology**—repeats each combining form and gives a medical term illustrating the use of the combining form. Definitions are in the *Mini-Dictionary* at the end of the book.
- **Pathology**—presents explanations of disease conditions related to each body system.
- **Diagnostic and Treatment Procedures**—explains and defines common examples for each body system.
- **Matching Exercises**—tests your understanding of the material, with answers included.

**PRACTICAL APPLICATIONS.** Throughout the text, and on the Student Evolve website, you will find exciting images, medical case reports, and vignettes and exercises called Picture Shows that illustrate terminology in the context of stories about patients and procedures.

**PICTURE SHOW**

Answer the questions that follow each image. Correct answers are given on page 168.

**A**

(Image from iStock.com / Johnny Greigi.)

- The images show examples of devices attached to a residual lower limb (“stump”) after amputation. These devices are called:
  - polyneuropathies
  - subtotal anomalies
  - prostheses
  - metastases

**IN PERSON: LIVING WITH TYPE 1 DIABETES**

The following first-person narrative describes the reality of living with a particular medical condition—type 1 diabetes in a teenager. In each of the subsequent chapters, you’ll find other first-person accounts of diseases and procedures that will make your study of medical terminology more relevant to real-life situations.

*Jake Sheldon has type 1 diabetes, which was diagnosed when he was 8 years old. The following narrative was written by his mother, Ruthellen Sheldon, based on his teenage years.*

On school days, I wake Jake up at 6:30 AM. He tests his blood sugar by pricking his finger until it bleeds, and then sticks a test strip into the drop of blood. Then he inserts the strip into a small hand-held glucometer and waits 3 to 5 seconds for a reading of his blood sugar. If this is 120 mg/dL or higher, he gives himself insulin 10 to 15 minutes before breakfast. He has an insulin pump, so he types in the amount of carbohydrates he will eat, plus his current blood sugar reading. The pump calculates how much insulin he needs to cover the carbs and any extra insulin he may need to bring down a high blood sugar. If Jake’s blood sugar is less than 120 mg/dL when he wakes up, he will wait until he takes his first bite of food to give himself his insulin to avoid hypoglycemia. Throughout the school day, if his blood sugar is high or low, he visits the nurse. If it’s high, he gives himself an insulin bolus, or correction, by pump. If his blood sugar is positive for ketones, he is sent home from school. If his blood sugar is low

**TERMINOLOGY CHECKUP.** This interactive and enhanced feature recaps and reinforces key concepts and easily confused terms in each chapter.

**CASE 7** *Endocrinology*

A 36-year-old woman known to have **type 1 diabetes mellitus** was brought to the emergency department after being found collapsed at home. She had experienced 3 days of extreme weakness, **polyuria**, and **polydipsia**. It was discovered that a few days before her admission, she had discontinued use of her external **insulin pump** (see Figure 5-12).

**FIGURE 5-12** External insulin pump. (Provided by Medtronic.)

**insulin pump** \_\_\_\_\_

**polydipsia** \_\_\_\_\_

**polyuria** \_\_\_\_\_

**type 1 diabetes mellitus** \_\_\_\_\_

**IN PERSON.** These compelling first-person narratives describe procedures and conditions from a uniquely personal perspective. After reading each story, medical terms take on new meaning as you experience intimately how it feels to be in a patient’s “shoes,” living through a diagnosis, disease, and treatment.

**TERMINOLOGY CHECKUP**

Before you leave this chapter, here are important concepts that you should thoroughly understand. In your own words, write the answers on the lines provided. Confirm your answers on the next page. Check the box next to each item when you know you’ve “got” it!

1. What is the difference between **endocrine glands** and **exocrine glands**. Give an example of each.
 

\_\_\_\_\_

\_\_\_\_\_
2. What is the difference between a **diagnosis** and a **prognosis**?
 

\_\_\_\_\_

\_\_\_\_\_
3. What is the difference between a **carcinoma** and a **sarcoma**? Give an example of each.
 

\_\_\_\_\_

\_\_\_\_\_

**REFERENCE GUIDE FOR MEDICAL AND HOSPITAL WORK.** This book is also a useful resource. Diagnostic Tests and Procedures (radiological, nuclear medicine, and clinical and laboratory tests) are found in *Appendix 2*. Abbreviations, symbols, acronyms, and eponyms are located in *Appendix 3*. NEW to this edition is a Quick Drug Reference located in *Appendix 4*. The *Mini-Dictionary* helps you study each chapter and also will be a reference for you in the workplace. Each definition has been crafted carefully to explain terms using plain, nontechnical language.

## ALSO AVAILABLE

### Student Evolve Website (access included with text purchase)

The Evolve website included with this new edition contains additional information, images, and video clips to test and expand your understanding. Chapter by chapter, you will find case studies, games, and activities, as well as a wealth of images to illustrate medical terminology. In the Audio Program section you can hear the proper pronunciation with each medical term in the book.

evolve

Visit <http://evolve.elsevier.com/Chabner/medtermshort> to access your resources.

### Medical Language Instant Translator (for sale separately)

My *Medical Language Instant Translator* is a uniquely useful resource for all allied health professionals and students of medical terminology. It is a pocket-sized medical terminology reference with convenient information at your fingertips!

*Medical Terminology: A Short Course* is exactly what you need to begin your medical career—whether in an office, hospital, or other medical setting. Use this handy book in a classroom with an instructor, or study it on your own. The combination of visually reinforced hands-on learning plus easily accessible reference material will mean success for you in your allied health career.

My more comprehensive workbook-text, *The Language of Medicine, 11th edition*, may be of interest to you as you continue your study of medical terminology. It can also serve as a valuable reference in the workplace.

I still experience the thrill and joy of teaching new students. I love being in the classroom and feel privileged to continue to write this text. I am available for help at any time. Please communicate your comments, questions, and suggestions to me at [daviellenchabner@gmail.com](mailto:daviellenchabner@gmail.com). For technical assistance, please contact [technical.support@elsevier.com](mailto:technical.support@elsevier.com).

Most of all, I hope this book brings to you excitement and enthusiasm for the medical language. It can ignite your imagination for new challenges and make your job more interesting. Work hard and have fun learning medical terminology!

# Acknowledgments

It is impossible to publish another edition of this book without the assistance and hard work of my extraordinary and exceptional editor, Maureen Pfeifer. On virtually every aspect of this edition, she has listened, advised, and delivered the best possible solutions ... with great intelligence, thoughtfulness, and careful attention to detail. We are a TEAM! Thank you, Maureen, for not only being a superb cross-country working partner, but my loyal friend, as well.

I appreciate the support and advocacy of Linda Woodard, Senior Content Strategist, Elsevier, Inc. She is always responsive to my concerns and willing to find solutions! Luke Held, Content Development Manager, continues to be a reliable resource and support for my books. Thanks, Luke, for being “in my corner.” I am also grateful to Diane Chatman, Senior Content Development Specialist, for her coordination and oversight of this edition.

Mike Sheets, Project Manager, facilitated the complex production of this edition. I appreciate his hard work and flexibility in all aspects of the project. Thank you, Brian Salisbury, Designer, for creating the layout and design for this edition. I appreciate your patience and cooperation.

Suzanne BeDell, Managing Director, Education, Reference and Continuity, took the time to become personally connected to me and my teaching. I appreciate her continuing involvement, insight, and vision for my work. Thanks also to other members of the Elsevier team: Michelle Harness, Director, Book Production; Julie Eddy, Publishing Services Manager, Book Production; and Kevin Herrin, Team Manager, Multimedia. A special thank you to the sales team for your continued support and promotion of my projects.

Jim Perkins, assistant professor of medical illustration, Rochester Institute of Technology, was responsible for the excellent, first-rate individual drawings that illustrate this edition. As always, he has done an outstanding job.

I am particularly grateful to the In Person contributors who shared their personal medical stories. Thanks so much to Ruthellen Sheldon, Cathy Ward, Elizabeth Chabner Thompson, Sidra DeKoven Ezrahi, and Nancy J. Brandwein.

I appreciate the valuable suggestions of the instructors who reviewed *Medical Terminology: A Short Course* for this new edition. They are listed with their credentials on page xv. Their helpful comments are incorporated in this text.

My class at Partners in Career and Workforce Development (PCWD), Partners Healthcare System has been an important resource for this edition. My students' enthusiasm and questions to inspire me. I appreciate them, and their commitment to beginning a career in healthcare.

Teachers and students worldwide continue to contact me with insights and questions. Thank you to: Mary Beth Dylewski, Tamara Bohnett, Gloria Lay, Isabel Isalguez, Mary Streight, N. Lee Price, Hani Elgendi, Robin Maddalena, Mohammed Allibaih, Kaylar Griffin, Joyce Y. Nakano, Judith Lytle, Julie Cox, Wendy Peters, Teresa Mills, Dianna Kerr, Jared Rodriguez, Ernest Nino-Murcia, Rori Alexander and Susan Grady.

My husband, Bruce A. Chabner, MD, and my daughter, Elizabeth Chabner Thompson, MD, MPH, are always available for expert medical advice and consultation. I am grateful for their availability no matter what else is going on in their busy lives and work. Special thanks for Dan L. Longo, MD, whom I continue to rely on for his infallible medical knowledge as well as his unwavering friendship.

Bruce and I think continuously of our friends and family who are in the throes of medical issues ... real time. Their positive attitudes and courage give deeper meaning to our daily lives.

***Davi-Ellen Chabner***

## CHAPTER OBJECTIVES

- To divide medical terms into component parts
- To analyze, pronounce, and spell medical terms using common combining forms, suffixes, and prefixes

## WORD ANALYSIS

If you work in a medical setting, you use medical words every day. In addition, you hear medical terms spoken in your doctor's office, read about health issues, and make daily decisions about your own health care and the health care of your family. Terms such as arthritis, electrocardiogram, hepatitis, and anemia describe conditions and tests that are familiar. Other medical words are more complicated, but as you work in this book, you will begin to understand them even if you have never studied biology or science.

Medical words are like individual jigsaw puzzles. Once you divide the terms into their component parts and learn the meaning of the individual parts, you can use that knowledge to understand many other new terms.

For example, the term HEMATOLOGY is divided into three parts:

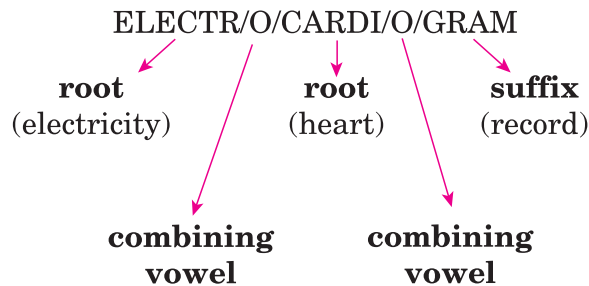

When you analyze a medical term, begin at the *end* of the word. The ending is called a **suffix**. All medical terms contain suffixes. The suffix in HEMATOLOGY is -LOGY, which means study of. Next, look at the beginning of the term. HEMAT is the word **root**. The root gives the essential meaning of the term. The root HEMAT means blood.

The third part of this term, which is the letter O, has no meaning of its own but is an important connector between the root (HEMAT) and the suffix (-LOGY). It is called a **combining vowel**. The letter O is the combining vowel usually found in medical terms.

Now put together the meanings of the suffix and the root: HEMATOLOGY means study of blood.

Another familiar medical term is ELECTROCARDIOGRAM. You probably know this term, often abbreviated as ECG (or sometimes EKG). This is how you divide it into its parts:

Start with the **suffix** at the end of the term. The suffix -GRAM means a record.

Now look at the beginning of the term. ELECTR is a word **root**, and it means electricity.

This medical term has two roots. The second root is CARDI, meaning heart. Whenever you see CARDI in other medical terms, you will know that it means heart.

**Read the meaning of medical terms from the suffix, back to the beginning of the term, and then across.** Broken down this way, ELECTROCARDIOGRAM means record of the electricity in the heart. It is the electrical current flowing within the heart that causes the heart muscle to contract, pumping blood throughout the body. The sound made by contraction and relaxation of the heart muscle is called the heartbeat.

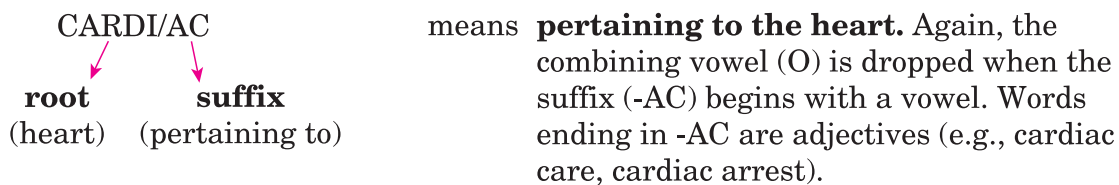

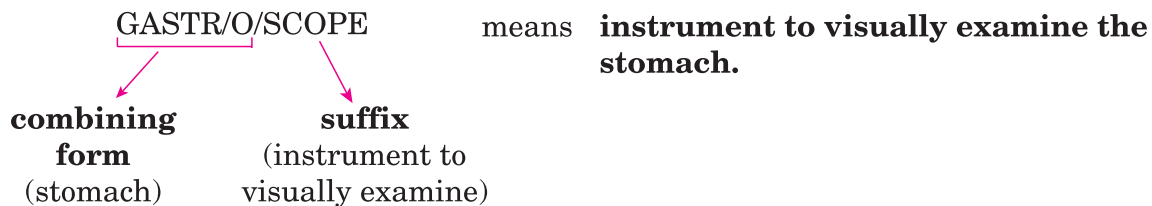

Notice the two combining vowels in ELECTROCARDIOGRAM. Looking for the O in medical terms will help you divide the term into its parts. One combining vowel (O) lies between two roots (ELECTR and CARDI) and another between the root (CARDI) and the suffix (-GRAM).

The combining vowel *plus* the root is called a **combining form**. For example, there are two combining forms in the word ELECTROCARDIOGRAM. These combining forms are ELECTR/O, meaning electricity, and CARDI/O, meaning heart.

Notice how the following medical term is analyzed. Can you locate the two combining forms in this term?

The two combining forms are GASTR/O and ENTER/O. The entire word (reading from the suffix, back to the beginning of the term, and across) means study of the stomach and the intestines. Here are other words that are divided into component parts:

## 4 BASIC WORD STRUCTURE

means **inflammation of the intestines**. Notice again that the combining vowel (O) is dropped because the suffix (-ITIS) begins with a vowel.

means **inflammation of the stomach and intestines**. Notice that the combining vowel (O) remains between the two roots here, even though the second root (ENTER) begins with a vowel.

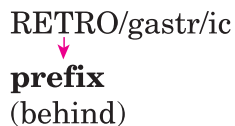

In addition to roots, suffixes, combining forms, and combining vowels, many medical terms have a word part attached to the *beginning* of the term. This is called a **prefix**, and it can change the meaning of a term in important ways. For example, watch what happens to the meaning of the following medical terms when the prefix changes:

means **pertaining to *below* the stomach**.

means **pertaining to *across* the stomach**.

means **pertaining to *behind* the stomach**.

Let's **REVIEW** the important word parts:

1. **Root**—gives the essential *meaning* of the term.
2. **Suffix**—is the word *ending*.
3. **Prefix**—is a small part added to the *beginning* of a term.
4. **Combining vowel**—*connects* roots to suffixes and roots to other roots.
5. **Combining form**—is the combination of the *root* and the *combining vowel*.

Some important rules to **REMEMBER** are:

1. **Read** the meaning of medical words from the suffix to the beginning of the word and then across.
2. **Drop** the combining vowel before a suffix that starts with a vowel.
3. **Keep** the combining vowel between word roots, even if the second root begins with a vowel.

## COMBINING FORMS, SUFFIXES, AND PREFIXES

Presented in this section are lists of combining forms, suffixes, and prefixes that are commonly found in medical terms. Write the meaning of the medical term on the line that is provided. Some terms will be more difficult to understand even after you know the meanings of individual word parts. For these, more extensive explanations are given in *italics*. To check your work, see the **Mini-Dictionary** beginning on [page 349](#), which contains meanings of all terms used in this book.

In your study of medical terminology, you will find it helpful to practice writing terms and their meanings many times. You'll succeed when you follow these simple steps:

1. Complete **Exercises** beginning on [page 23](#) for this chapter, and faithfully check your answers on [pages 31 to 32](#).
2. Fill in the meanings in the **Pronunciation of Terms** list on [pages 33 to 36](#).
3. Apply your knowledge in the **Practical Applications** and **Picture Show** features beginning on [page 37](#).
4. Complete the **Review** of word parts beginning on [page 42](#) and check your answers.
5. Make sure you understand the key medical terminology concepts in the **Terminology CheckUp** on [page 45](#).

### COMBINING FORMS

Notice that the **combining form** is in **bold** type, while the root in the medical term is underlined.

Combining Form	Meaning	Medical Term	Meaning
<b>aden/o</b>	gland	<u>adenoma</u> _____	
		-OMA <i>means tumor or mass.</i>	
<b>arthr/o</b>	joint	<u>adenitis</u> _____	
		-ITIS <i>means inflammation.</i>	
<b>bi/o</b>	life	<u>arthritis</u> _____	
		<u>biology</u> _____	
		-LOGY <i>means study of.</i>	
<b>carcin/o</b>	cancer, cancerous	<u>biopsy</u> _____	
		-OPSY <i>means (process of) viewing. Living tissue is removed and viewed under a microscope.</i>	
<b>cardi/o</b>	heart	<u>carcinoma</u> _____	
		<u>cardiology</u> _____	

## 6 BASIC WORD STRUCTURE

<b>cephal/o</b>	head	<b>cephalic</b> _____ -IC means pertaining to. If an infant is born with the head delivered first, it is a <b>cephalic</b> presentation.
<b>cerebr/o</b>	cerebrum, largest part of the brain	<b>cerebral</b> _____ -AL means pertaining to. <i>Figure 1-1</i> shows the cerebrum and its functions.
		<b>cerebrovascular accident (CVA)</b> _____ -VASCULAR means pertaining to blood vessels; a CVA is commonly known as a <b>stroke</b> . 📌

### What happens in a stroke?

Blood is prevented from reaching areas of the cerebrum, and brain cells die. Depending on the location and extent of reduced blood flow, signs and symptoms may include loss of movement (paralysis), loss of speech (aphasia), weakness, and changes in sensation.

**FIGURE 1-1** Functions of the cerebrum.

**FIGURE 1-2** Male urinary tract.

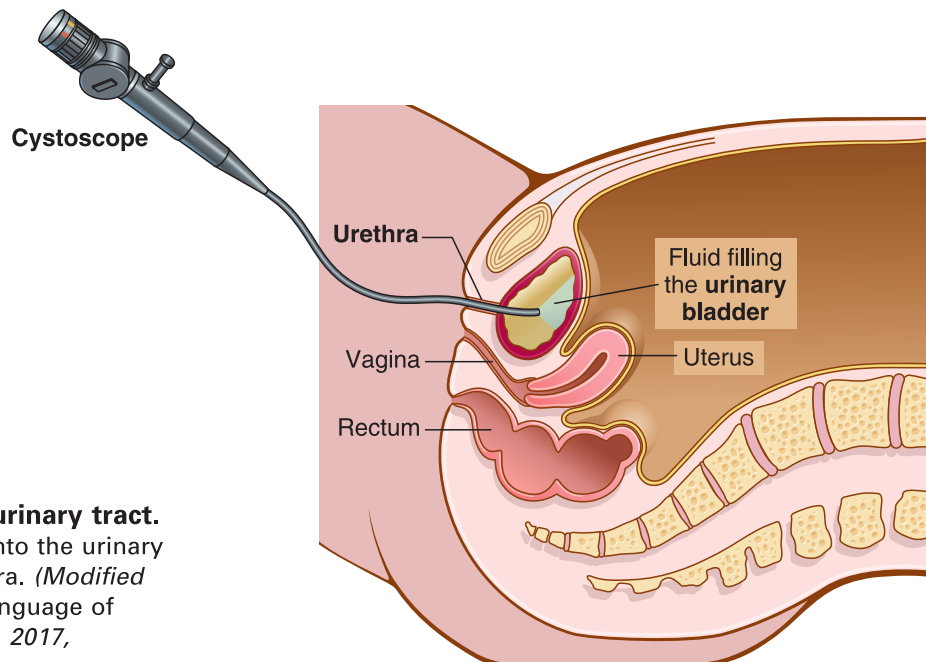

Note that the prostate gland lies below the urinary bladder. It secretes fluid that combines with sperm to form semen. Semen leaves the body through the urethra during ejaculation. (Modified from Chabner D-E: *The Language of Medicine, ed 11, St. Louis, 2017, Elsevier.*)

**cyst/o**

urinary bladder

**cystoscope** \_\_\_\_\_

**-SCOPE** means *instrument to visually examine*. *Figure 1-2* shows the urinary bladder and urinary tract in a male. *Figure 1-3* shows a cystoscope placed through the urethra into the urinary bladder of a female during cystoscopy.

**FIGURE 1-3** Female urinary tract.

A **cystoscope** is placed into the urinary bladder through the urethra. (Modified from Chabner D-E: *The Language of Medicine, ed 11, St. Louis, 2017, Elsevier.*)

## 8 BASIC WORD STRUCTURE

<b>cyt/o</b>	cell	<u>cytology</u> _____
<b>derm/o</b>	skin	<u>dermal</u> _____
<b>dermat/o</b>	skin	<u>dermatitis</u> _____
<b>electr/o</b>	electricity	<u>electrocardiogram (ECG)</u> _____

*-GRAM means record. EKG is an older abbreviation for this test.*

<b>encephal/o</b>	brain	electroencephalogram (EEG) _____ <i>This record is helpful in determining whether a patient has a seizure disorder, such as epilepsy.</i>
<b>enter/o</b>	intestines (often the small intestine)	<u>enteritis</u> _____ <i>Figure 1-4 shows the small and large intestines. ENTER/O describes the small intestine and sometimes intestines in general. COL/O and COLON/O are combining forms for the large intestine (colon).</i>
<b>erythr/o</b>	red	<u>erythrocyte</u> _____ <i>-CYTE means cell. Figure 1-5 shows the three major types of blood cells.</i>

**ERYTHROCYTES****LEUKOCYTES**

1. Eosinophil

2. Basophil

3. Neutrophil

4. Lymphocyte

5. Monocyte

**THROMBOCYTES  
(platelets)**

**FIGURE 1-5** Blood cells: **erythrocytes** (carry oxygen), **leukocytes** (five different types help fight disease), and **thrombocytes** or **platelets** (help blood to clot). (Modified from Chabner D-E: The Language of Medicine, ed 11, St. Louis, 2017, Elsevier.)

# 10 BASIC WORD STRUCTURE

**gastr/o** stomach gastroscopy \_\_\_\_\_  
 -SCOPY means process of visual examination using an instrument, or “scope.”

**gnos/o** knowledge diagnosis \_\_\_\_\_  
 -SIS means state of; DIA- means complete. A diagnosis is the complete knowledge gained after testing and examining the patient. The plural of diagnosis is diagnoses. *Table 1-1* shows other plural formations.

prognosis \_\_\_\_\_  
 PRO- means before. A prognosis is a prediction (before knowledge) that is made after the diagnosis. It forecasts the outcome of treatment.

**TABLE 1-1 FORMATION OF PLURALS**

Consult the **Mini-Dictionary** beginning on page 349 for pronunciations of all terms.

1. Words ending in **a** retain the **a** and add **e**:

<b>Singular</b>	<b>Plural</b>	<b>Meaning</b> (of singular term)
vertebra	vertebrae	Backbone
bursa	bursae	Sac of fluid near a joint

2. Words ending in **is** drop the **is** and add **es**:

<b>Singular</b>	<b>Plural</b>	<b>Meaning</b> (of singular term)
diagnosis	diagnoses	Determination of the nature and cause of a disease
psychosis	psychoses	Abnormal condition of the mind

3. Words ending in **ex** or **ix** drop the **ex** or **ix** and add **ices**:

<b>Singular</b>	<b>Plural</b>	<b>Meaning</b> (of singular term)
apex	apices	Pointed end of an organ
cortex	cortices	Outer part of an organ
varix	varices	Enlarged, swollen vein

4. Words ending in **on** drop the **on** and add **a**:

<b>Singular</b>	<b>Plural</b>	<b>Meaning</b> (of singular term)
ganglion	ganglia	Group of nerve cells; benign cyst near a joint (such as the wrist)

5. Words ending in **um** drop the **um** and add **a**:

<b>Singular</b>	<b>Plural</b>	<b>Meaning</b> (of singular term)
bacterium	bacteria	Type of one-celled organism
ovum	ova	Egg cell

6. Words ending in **us** drop the **us** and add **i**\*:

<b>Singular</b>	<b>Plural</b>	<b>Meaning</b> (of singular term)
bronchus	bronchi	Tube leading from the windpipe to the lungs
calculus	calculi	Stone

\*Exceptions to this rule are viruses and sinuses.

<b>gynec/o</b>	woman, female	<u>gynecology</u>  _____
<b>hem/o,</b> <b>hemat/o</b>	blood	<u>hemoglobin</u> _____ -GLOBIN means protein. Hemoglobin is the protein in red blood cells (erythrocytes) that helps carry oxygen in the blood.
		<u>hematoma</u> _____ -OMA means mass or tumor. In this term, -oma indicates a mass or swelling containing blood. 
<b>hepat/o</b>	liver	<u>hepatitis</u> _____

### Be careful about spelling this term!

The combining form is **gynec/o**. A **gynecologist** specializes in diseases of the female reproductive organs. Gynecology involves both surgical and internal medicine expertise, and is often practiced with **obstetrics** (care of pregnant women and delivery of a fetus).

**FIGURE 1-6** **A, Subungual hematoma.** This collection of blood under (SUB-) a nail (UNGU/O = nail) resulted from trauma to the toe. **B, Hematoma from broken ribs.** (A, From Habif TP: Clinical Dermatology, ed 4, St. Louis, 2004, Mosby.)

### Hematoma

A **hematoma** is a mass of blood trapped in tissues of the skin or in an organ. It often results from trauma and is commonly called a bruise or “black-and-blue” mark.

Figure 1-6 A and B shows hematomas.

## 12 BASIC WORD STRUCTURE

**lapar/o** abdomen (area between the chest and hip)

**laparotomy** \_\_\_\_\_  
*-TOMY means cutting into. In an **exploratory laparotomy** the surgeon makes a large incision in the abdominal wall to inspect organs for evidence of disease. See [Figure 1-7A](#). **Laparoscopy** is visual examination of the abdomen using several small incisions for a **laparoscope** and other instruments. See [Figure 1-7B](#). Another combining form for abdomen is ABDOMIN/O, as in abdominal.*

**leuk/o** white

**leukocyte** \_\_\_\_\_  
*[Figure 1-5](#) on page 9 shows five different types of leukocytes.*

**nephr/o** kidney

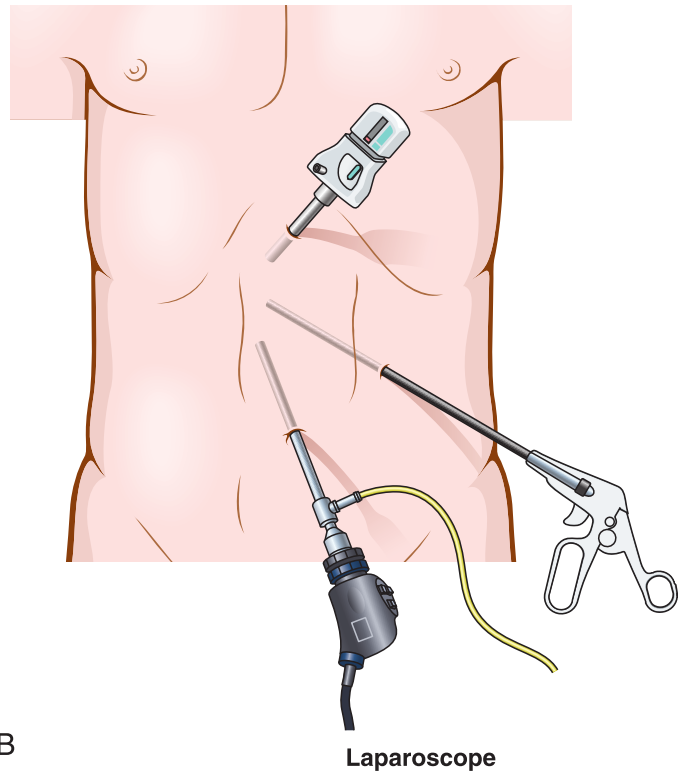

**nephrectomy** \_\_\_\_\_  
*-ECTOMY means cutting out—an excision or resection of an organ or other part of the body.*

**neur/o** nerve

**neurology** \_\_\_\_\_

**onc/o** tumor (cancerous)

**oncologist** \_\_\_\_\_  
*-IST means a specialist.*

**FIGURE 1-7** **A, Laparotomy.** This large incision was closed with surgical staples. **B, Laparoscopy.** The abdomen is examined making small incisions and using a laparoscope.

**FIGURE 1-8 A, Ophthalmoscope.** This instrument allows the ophthalmologist to view both the outer and inner areas of the eye. **B, Ophthalmoscopic examination.** **C, The inner or back area (retina) of a normal eye** as seen through an ophthalmoscope. (A, Modified from Jarvis, Physical Examination and Health Assessment, St. Louis, 2016, Saunders. B, From Jarvis C: Physical Examination and Health Assessment, ed 3, Philadelphia, 2000, Saunders. C, Courtesy of Dr. Jay Rosen, The Eye Gallery, Scarsdale NY, and Louisa Thompson.)

**ophthalm/o** eye

**ophthalmoscope** \_\_\_\_\_

Figure 1-8A is an image of ophthalmoscope. Figure 1-8B shows an ophthalmologist, a medical doctor, examining a patient's eye. Figure 1-8C shows the retina, lining the back of the eye (fundus) as seen through an ophthalmoscope.

**oste/o** bone

**osteoarthritis** \_\_\_\_\_

Figure 1-9 shows a normal knee joint and a knee joint with osteoarthritis. Degenerative changes with thinning and loss of cartilage occur. Inflammation of the joint membrane occurs late in the disease.

**FIGURE 1-9 Normal knee joint** and knee joint with **osteoarthritis**.

**path/o** disease

**pathologist**  \_\_\_\_\_

*A pathologist is a medical doctor who views biopsy samples to make a diagnosis and examines dead bodies (in an autopsy) to determine the cause of death. AUT- means self, and -OPSY means (process of) viewing. Thus, an autopsy is an opportunity to see for oneself what caused a patient's death.*

**psych/o** mind

**psychosis** \_\_\_\_\_

*-OSIS means abnormal condition. In this serious mental condition, the patient loses touch with reality. Psychotic symptoms include **hallucinations** (unreal sensory perceptions, such as hearing voices when none are present) and **delusions** (fixed, false beliefs that can't be changed by logical reasoning).*

**ren/o** kidney

**renal** \_\_\_\_\_

*Sometimes there are two combining forms for the same part of the body. Often, one comes from Latin and the other from Greek. REN- is the Latin root meaning "kidney," and NEPHR- is the Greek root meaning "kidney." The Greek root describes abnormal conditions and procedures, whereas the Latin root is used with -AL, meaning "pertaining to."*

**rhin/o** nose

**rhinitis** \_\_\_\_\_

**sarc/o** flesh

**sarcoma** \_\_\_\_\_

*Sarcomas and carcinomas are both cancerous tumors. Sarcomas grow from the fleshy (connective) tissues of the body, such as muscle, fat, bone, and cartilage, whereas carcinomas arise from skin tissue and the linings of internal organs.*

**thromb/o** clotting

**thrombocyte** \_\_\_\_\_

*A thrombocyte (**platelet**) is a small cell that helps blood to clot. Platelets are shown in [Figure 1-5](#) (see page 9).*

**thrombosis** \_\_\_\_\_

*Formation of a **thrombus** (blood clot) occurs when thrombocytes and other clotting factors combine. **Thrombosis** describes the condition of forming a clot (thrombus).*

### Pathologist/medical examiner/coroner

A **medical examiner (M.E.)** is a **pathologist** who specializes in forensic (legal) medicine related to criminal issues. A **coroner**, however, is an elected official (administrator) who investigates any suspicious death. This official may or may not be a medical examiner.

## SUFFIXES

Each suffix is in **bold** in the Suffix column and underlined in the Medical Term column.

Suffix	Meaning	Medical Term	Meaning
<b>-al</b>	pertaining to	neur <u>al</u> _____ <i>Other suffixes meaning pertaining to are listed on page 385 in Glossary of Word Parts.</i>	
<b>-algia</b>	condition of pain	arthr <u>algia</u> _____	
<b>-cyte</b>	cell	leukoc <u>yte</u> _____	
<b>-ectomy</b>	cutting out; removal, excision	gastro <u>ectomy</u> _____ <i>In a partial or subtotal gastrectomy, only a portion of the stomach is removed.</i>	
<b>-emia</b>	blood condition	leuk <u>emia</u> _____ <i>Large numbers of immature, cancerous cells are found in the bloodstream and bone marrow (inner part of bone that makes blood cells).</i>	
<b>-globin</b>	protein	hemog <u>lobin</u> _____	
<b>-gram</b>	record	arthro <u>gram</u> _____ <i>This is an x-ray record of a joint.</i>	
<b>-ia</b>	condition	neur <u>algia</u> _____ <i>-IA means condition and is part of the larger suffix -ALGIA meaning condition of pain.</i>	
<b>-ic</b>	pertaining to	gastr <u>ic</u> _____	
<b>-ism</b>	condition, process	hyperthyroid <u>ism</u> _____ <i>HYPER- means excessive. The thyroid gland is in the neck. It secretes the hormone thyroxine, which helps cells burn food to release energy. See Figure 1-10.</i>	
<b>-itis</b>	inflammation	gastroenter <u>itis</u> _____	
<b>-logist</b>	specialist in the study of	neuro <u>logist</u> _____	
<b>-logy</b>	study of	nephro <u>logy</u> _____ <i>See Table 1-2 on page 16 for a list of other terms using -LOGY.</i>	
<b>-oma</b>	tumor, mass	hepat <u>oma</u> _____ <i>This is a cancerous (malignant) tumor, also called <b>hepatocellular carcinoma</b>.</i>	

**FIGURE 1-10 Hyperthyroidism (Graves disease).**

The thyroid gland produces too much hormone, which causes signs and symptoms such as rapid pulse, nervousness, excessive sweating, and swelling of tissue behind the eyeball (resulting in exophthalmos, or “bulging” of the eyes). Notice the enlarged thyroid gland in the neck. (Modified from Seidel H, et al: Mosby’s Guide to Physical Examination, ed 4, St. Louis, 1998, Mosby.)

**-opsy** to view

biopsy \_\_\_\_\_

**-osis** abnormal condition

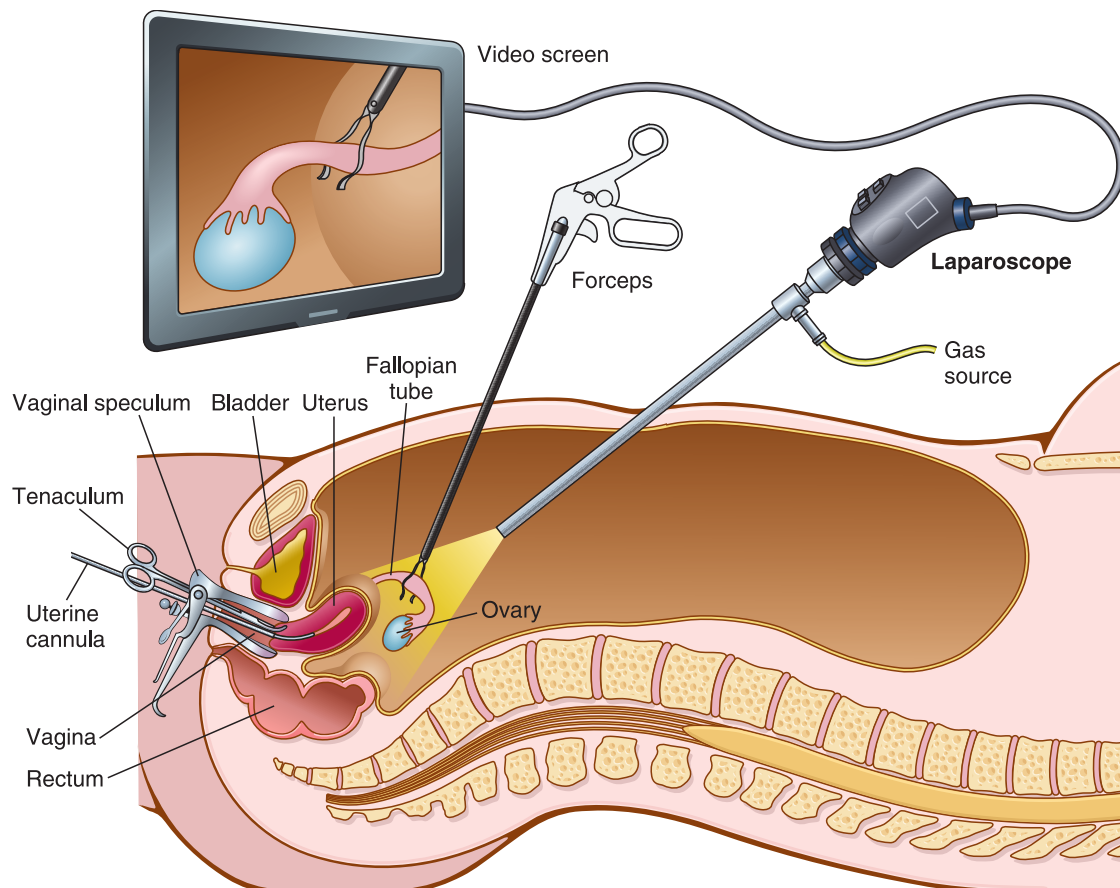

nephrosis \_\_\_\_\_

leukocytosis \_\_\_\_\_

*This is an increase in numbers of normal white blood cells as a response to infection.*

TABLE 1-2 TERMS USING <b>-LOGY</b> (STUDY OF)	
Cardiology	Study of the heart
Dermatology	Study of the skin
Endocrinology	Study of the endocrine glands
Gastroenterology	Study of the stomach and intestines
Gynecology	Study of women and women’s diseases
Hematology	Study of the blood
Neurology	Study of the nerves and the brain and spinal cord
Oncology	Study of tumors (cancerous or malignant diseases)
Ophthalmology	Study of the eye
Pathology	Study of disease
Psychology	Study of the mind and mental disorders
Rheumatology	Study of joint diseases (RHEUMAT/O = flow or watery discharge, which was once thought to cause aches and pains, especially in joints)
Urology	Study of the urinary tract (surgical specialty)

<b>-scope</b>	instrument to visually examine	gastroscope _____
		laparoscope _____
<b>-scopy</b>	process of visual examination	laparoscopy _____
		<i>Small incisions are made near the navel, and instruments are inserted into the abdomen for viewing organs and performing procedures such as tying off the fallopian (uterine) tubes. See Figure 1-11.</i>
		arthroscopy _____
		<i>See Figure 1-12 (page 18).</i>
<b>-sis</b>	state of	prognosis _____
<b>-tomy</b>	process of cutting into; incision	neurotomy _____

**FIGURE 1-11 Laparoscopy for tubal ligation** (interruption of the continuity of the fallopian tubes) as a means of preventing future pregnancy. The vaginal speculum keeps the vaginal cavity open. The uterine cannula is a tube placed into the uterus to manipulate the uterus during the procedure. Forceps and tenaculum are used for grasping or manipulating tissue. (Modified from Chabner D-E: *The Language of Medicine*, ed 11, St. Louis, 2017, Elsevier.)

**FIGURE 1-12 Arthroscopy of the shoulder.** A surgeon (orthopedist) performs an arthroscopic examination to make a diagnosis or treat disease of the joints (courtesy of Michael J. Curtin, MD, St. Luke's Clinic, Boise, Idaho).

## PREFIXES

Each prefix is in **bold** type in the Prefix column and underlined in the Medical Term column.

Prefix	Meaning	Medical Term	Meaning
<b>a-, an-</b>	no, not	<u>anemia</u> 	<i>Literally, anemia means a condition of “no blood.” Actually, it is a decrease in the number of red blood cells or in hemoglobin, the protein that helps in their ability to carry oxygen.</i>
<b>aut-</b>	self	<u>autopsy</u>	<i>Viewing and examining a dead body with one's own (self) eyes. Here the root OPS- (viewing) is embedded in the suffix -OPSY (process of viewing).</i>

### Where is the root?

Some suffixes can contain roots. In the term anemia, notice that the root EM- (from HEM, meaning blood) is embedded in the suffix -EMIA.

<b>dia-</b>	complete, through	<u>diagnosis</u> _____ <i>In this term, DIA- means complete.</i>
		<u>diameter</u> _____ <i>The suffix -METER means measurement. DIA- means through in this term.</i>
<b>dys-</b>	bad, painful, difficult, abnormal	<u>dysentery</u> _____ <i>The suffix -Y means condition or process.</i>
<b>endo-</b>	within	<u>endocrine glands</u> _____ <i>CRIN/O means to secrete (to form and give off). Examples of endocrine glands are the thyroid gland, pituitary gland, adrenal glands, ovaries, and testes. All of these glands secrete hormones <b>within</b> the body and into the bloodstream.</i>
		<u>endocardium</u> _____ <i>The valves and chambers within the heart are lined with endocardium. The suffix -UM indicates a structure.</i>
<b>exo-</b>	outside	<u>exocrine glands</u> _____ <i>Examples of exocrine glands are sweat, tear, and mammary (breast) glands, which secrete substances to the <b>outside</b> of the body.</i>
<b>hyper-</b>	excessive, more than normal, too much	<u>hyperglycemia</u> _____ <i>GLYC/O means sugar. Hyperglycemia may be a sign of diabetes mellitus. Mellitus means “sweet.”</i> 
<b>hypo-</b>	below, less than normal, under	<u>hypoglycemia</u> _____ <i>This condition results from too much insulin in the bloodstream. Symptoms are weakness, headache, and hunger.</i>
<b>peri-</b>	surrounding	<u>pericardium</u> _____

### Hyperglycemia and diabetes

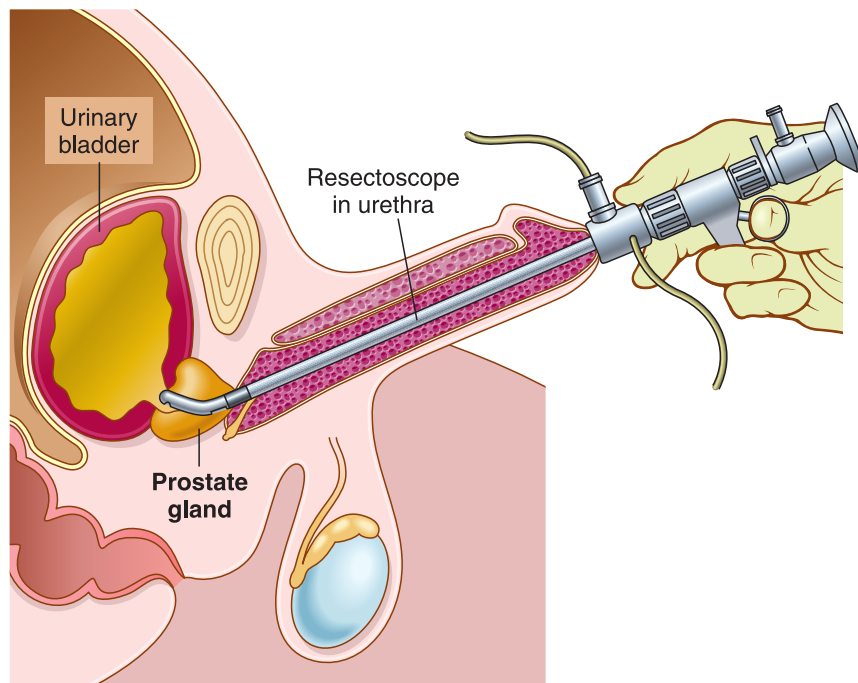

People with hyperglycemia lack insulin (**type 1 diabetes**) or have ineffective insulin (**type 2 diabetes**). Insulin is a hormone normally released by the pancreas, an endocrine gland near the stomach. Insulin allows sugar to leave the bloodstream and enter cells. When insulin is either absent or not working, sugar remains in the blood, resulting in hyperglycemia and diabetes. See *In Person: Living with Type 1 Diabetes* on page 21.

<b>pro-</b>	before, forward	<u>prostate gland</u> _____ <i>This exocrine gland “stands” (-STATE) before or in front of the urinary bladder in males (see <a href="#">Figure 1-13</a>).</i>
<b>re-</b>	back	<u>resection</u> _____ <i>-SECTION means cutting into an organ, but RESECTION means removing some or all of an organ in the sense of cutting back or away. The Latin resectio means “a trimming or pruning.”</i>
<b>retro-</b>	behind	<u>retrogastric</u> _____
<b>sub-</b>	below, under	<u>subhepatic</u> _____
<b>trans-</b>	across, through	<u>transdermal</u> _____  <u>transurethral</u>  _____ <i>The urethra is a tube that leads from the urinary bladder to the outside of the body.</i>

### Transurethral resection of the prostate gland (TURP)

This is a surgical procedure to remove noncancerous (benign) growth of the prostate gland. Pieces of the enlarged gland are removed through the urethra. See [Figure 1-13](#).

**FIGURE 1-13** Transurethral resection of the prostate (TURP). The resectoscope contains a light, valves for controlling irrigating fluid, and an electrical loop that cuts tissue and seals blood vessels. (From *Chabner D-E: The Language of Medicine, ed 11, St. Louis, 2017, Elsevier.*)

## IN PERSON: LIVING WITH TYPE 1 DIABETES

*The following first-person narrative describes the reality of living with a particular medical condition—type 1 diabetes in a teenager. In each of the subsequent chapters, you'll find other first-person accounts of diseases and procedures that will make your study of medical terminology more relevant to real-life situations.*

*Jake Sheldon has type 1 diabetes, which was diagnosed when he was 8 years old. The following narrative was written by his mother, Ruthellen Sheldon, based on his teenage years.*

On school days, I wake Jake up at 6:30 AM. He tests his blood sugar by pricking his finger until it bleeds, and then sticks a test strip into the drop of blood. Then he inserts the strip into a small hand-held glucometer and waits 3 to 5 seconds for a reading of his blood sugar. If this is 120 mg/dL or higher, he gives himself insulin 10 to 15 minutes before breakfast. He has an insulin pump, so he types in the amount of carbohydrates he will eat, plus his current blood sugar reading. The pump calculates how much insulin he needs to cover the carbs and any extra insulin he may need to bring down a high blood sugar. If Jake's blood sugar is less than 120 mg/dL when he wakes up, he will wait until he takes his first bite of food to give himself his insulin to avoid hypoglycemia.

Throughout the school day, if his blood sugar is high or low, he visits the nurse. If it's high, he gives himself an insulin bolus, or correction, by pump. If his blood sugar is positive for ketones, he is sent home from school. If his blood sugar is low or less than 70, he eats or drinks some fast-acting sugar (Skittles, Smarties, or Sprite) and waits in the healthroom for his blood sugar to rise so he can return to class.

During the night, his dad and I set an alarm to wake up around 3 hours after bedtime. If his blood sugar is high while he sleeps, we use his pump to give him extra insulin, "a correction." If it is low, we wake him and have him drink Sprite or eat Smarties.

The insulin pump is connected to his body with a small cannula [tube]. It is inserted manually through a needle into his hip region. The needle is then removed and the tiny Teflon cannula remains in his body, delivering fast-acting insulin under the skin. His pump is always connected to him with plastic tubing, and he carries it with him in his pants pocket. When he bathes, he can disconnect the pump, and when he sleeps, he places it on the mattress next to his body.

When Jake is playing sports, he times his meals with the start of the activity so his blood sugar is around 150 mg/dL. He disconnects his pump during sports, and at halftime he tests his blood sugar. If it is low, he needs to eat. If it is high, he needs to reconnect his pump and administer more insulin.

In general, Jake's diabetes doesn't disrupt his life other than for his nighttime checks, wearing an insulin pump, and paying attention to how many carbs he eats. We encourage him to make good nutritional choices and to limit certain foods (doughnuts, Slurpees, candy) to special occasions. He also must carry a glucometer with him at all times and a sugar to take when his blood glucose is low.

Having a child with diabetes forces me to carefully plan the preparation and timing of meals. I always have certain foods and medical supplies in the house, and I also carry snacks and sugar sources wherever I go. My husband and I hope that keeping Jake's blood sugar in tight control will help avoid many of the complications frequently encountered later in life by people with type 1 diabetes.

Throughout high school, Jake took over all diabetes management tasks and managed his diabetes 100 percent independently before his graduation. Moving out of state to college, Jake has had to learn how cafeteria foods, late nights, and new social situations affect his blood sugars. Jake is also learning how to manage ordering and maintaining a vast number of diabetes supplies and prescriptions in his dorm room. Jake will also be transitioning from his pediatric endocrinologist to an adult endocrinologist this year.

*Ruthellen Sheldon and her son, Jake, now 18 years old.*

## EXERCISES AND ANSWERS

*These exercises give you practice writing and understanding the terms presented in the chapter. An important part of your work is to **check your answers** with the Answers to Exercises beginning on [page 31](#). If you cannot answer a question, then please look at the answer key and **copy** the correct answer. You may want to photocopy some of the exercises before you complete them so that you can practice doing them many times. **Remember the 3 “Rs”—wRite, Review, Repeat—and you will succeed!***

*Visit the Evolve website (<http://evolve.elsevier.com/Chabner/medtermshort>) for additional information, images, games, videos, and interactive activities.*

**A** Using slashes (/), divide the following terms into their component parts and give the meaning for the whole term. The first term is completed as an example.

1. aden/oma *tumor of a gland* \_\_\_\_\_
2. arthritis \_\_\_\_\_
3. biopsy \_\_\_\_\_
4. cardiology \_\_\_\_\_
5. dermal \_\_\_\_\_
6. cytology \_\_\_\_\_
7. cystoscope \_\_\_\_\_
8. cerebral \_\_\_\_\_
9. cephalic \_\_\_\_\_
10. adenitis \_\_\_\_\_

**B Complete the following sentences using the medical terms given below.**

diagnosis	erythrocyte	hepatitis
electrocardiogram	gynecology	prognosis
electroencephalogram	hematoma	
enteritis	hemoglobin	

1. A mass of blood, or “black-and-blue” mark, is a/an \_\_\_\_\_.
2. A red blood cell is a/an \_\_\_\_\_.
3. Inflammation of the small intestine is \_\_\_\_\_.
4. The prediction about the outcome of an illness is a/an \_\_\_\_\_.
5. The record of electricity in the brain is a/an \_\_\_\_\_.
6. The study of women and women’s diseases is \_\_\_\_\_.
7. The record of electricity in the heart is a/an \_\_\_\_\_.
8. Complete knowledge of a patient’s illness on the basis of tests and other information is a/an \_\_\_\_\_.
9. A protein found in red blood cells is \_\_\_\_\_.
10. Inflammation of the liver is \_\_\_\_\_.

**C Name the tissue or part of the body contained in the following terms and give the meaning of the entire term.**

Tissue/Body Part	Meaning of Term
1. laparotomy _____	_____
2. nephrectomy _____	_____
3. neuritis _____	_____
4. ophthalmoscope _____	_____
5. osteotomy _____	_____
6. renal _____	_____
7. rhinitis _____	_____
8. sarcoma _____	_____

**D** Give the meanings of the following terms.

1. oncologist \_\_\_\_\_
2. pathologist \_\_\_\_\_
3. psychosis \_\_\_\_\_
4. leukocyte \_\_\_\_\_
5. thrombocyte \_\_\_\_\_
6. gastritis \_\_\_\_\_
7. adenoma \_\_\_\_\_
8. thrombosis \_\_\_\_\_

**E** Give the meanings of the following suffixes.

1. -cyte \_\_\_\_\_
2. -ism \_\_\_\_\_
3. -ectomy \_\_\_\_\_
4. -al \_\_\_\_\_
5. -emia \_\_\_\_\_
6. -gram \_\_\_\_\_
7. -algia \_\_\_\_\_
8. -itis \_\_\_\_\_
9. -globin \_\_\_\_\_
10. -ic \_\_\_\_\_

**F** Complete the following medical terms to end each sentence.

1. Nerve pain is **neur**\_\_\_\_\_.
2. Presence of large numbers of immature, cancerous white blood cells is a blood condition known as **leuk**\_\_\_\_\_.
3. An x-ray record of a joint is **arthro**\_\_\_\_\_.
4. Study of the kidney is **nephro**\_\_\_\_\_.
5. Tumor of the liver is **hepat**\_\_\_\_\_.
6. Visual examination of the abdomen is **laparo**\_\_\_\_\_.
7. An incision of a joint is called **arthro**\_\_\_\_\_.
8. Abnormal condition of the skin is **dermat**\_\_\_\_\_.
9. Inflammation of the skin is **dermat**\_\_\_\_\_.
10. A specialist in the study of blood is a **hemato**\_\_\_\_\_.

**G** Give the meanings of the following prefixes.

1. hyper- \_\_\_\_\_
2. sub- \_\_\_\_\_
3. dys- \_\_\_\_\_
4. trans- \_\_\_\_\_
5. retro- \_\_\_\_\_
6. dia- \_\_\_\_\_
7. exo- \_\_\_\_\_
8. aut- \_\_\_\_\_
9. hypo- \_\_\_\_\_
10. endo- \_\_\_\_\_
11. peri- \_\_\_\_\_

**H** Give the meanings of the following medical terms.

1. autopsy \_\_\_\_\_
2. hyperthyroidism \_\_\_\_\_
3. anemia \_\_\_\_\_
4. dysentery \_\_\_\_\_
5. endocrine glands \_\_\_\_\_
6. hypoglycemia \_\_\_\_\_
7. exocrine glands \_\_\_\_\_
8. resection \_\_\_\_\_
9. transdermal \_\_\_\_\_
10. hyperglycemia \_\_\_\_\_

**I** Complete the following medical terms related to the stomach.

1. \_\_\_\_\_ gastric Pertaining to **under** the stomach
2. gastr\_\_\_\_\_ **Pain** in the stomach
3. gastr\_\_\_\_\_ **Inflammation** of the stomach
4. \_\_\_\_\_ gastric Pertaining to **across** or **through** the stomach
5. gastr\_\_\_\_\_ **Process of visually examining** the stomach
6. \_\_\_\_\_ gastric Pertaining to **behind** the stomach
7. gastr\_\_\_\_\_ **Study of** the stomach and intestines
8. gastr\_\_\_\_\_ **Incision** of the stomach
9. gastr\_\_\_\_\_ **Excision** of the stomach
10. gastr\_\_\_\_\_ **Instrument to visually examine** the stomach

**J** On the line provided, give the meaning of the term in bold.

1. An **oncologist** treats abnormal conditions such as sarcomas and carcinomas.

\_\_\_\_\_

2. After explaining the diagnosis, Dr. Jones outlined the treatment and assured the patient that the **prognosis** was hopeful. \_\_\_\_\_

\_\_\_\_\_

3. Elderly Mrs. Scott has constant arthralgia in her knees and hips. Her physician prescribes anti-inflammatory drugs and aspirin to treat her **osteoarthritis** but advises that joint replacement may be necessary. \_\_\_\_\_

\_\_\_\_\_

4. A **pathologist** is a medical doctor who performs autopsies and examines biopsy samples. \_\_\_\_\_

\_\_\_\_\_

5. **Thrombosis** is a serious condition that may result in blockage of blood vessels.

\_\_\_\_\_

6. **Hyperglycemia** results from lack of insulin (hormone) secretion from the pancreas (endocrine gland near the stomach). Without insulin, sugar cannot enter cells and remains in the blood. \_\_\_\_\_

\_\_\_\_\_

7. Schizophrenia is an example of a **psychosis**, in which the patient loses touch with reality and displays abnormal behavior (delusions and hallucinations may occur).

\_\_\_\_\_

8. Minimally invasive surgery of the abdomen may be performed using **laparoscopy**. For example, a gallbladder or appendix can be removed with instruments inserted through small incisions. \_\_\_\_\_

\_\_\_\_\_

9. Clinical signs of **hyperthyroidism** include an enlarged thyroid gland and protruding eyeballs (exophthalmos). \_\_\_\_\_  
\_\_\_\_\_
10. Sally's diagnosis of **dysentery** was made after she returned from a trip to Mexico with abdominal pain, fever, and severe diarrhea (loose, watery stools). \_\_\_\_\_  
\_\_\_\_\_
11. Mr. Smith died of a **cerebrovascular accident**. Confirmation at autopsy revealed a thrombus blocking one of his cerebral arteries. \_\_\_\_\_  
\_\_\_\_\_
12. **Erythrocytes** contain hemoglobin, which enables them to carry oxygen throughout the body. \_\_\_\_\_
13. **Leukemia** was confirmed after a bone marrow biopsy and high white blood cell counts. \_\_\_\_\_
14. Certain types of bleeding or clotting disorders may be caused by reduced numbers of thrombocytes, also known as **platelets**. \_\_\_\_\_
15. An example of **anemia** is iron deficiency anemia. \_\_\_\_\_  
\_\_\_\_\_
16. **Transdermal** delivery by patch is used for administering drugs such as nicotine, nitroglycerin, and scopolamine (for motion sickness). \_\_\_\_\_  
\_\_\_\_\_
17. When Bill had difficulty urinating (urinary retention), his doctor discovered that his **prostate gland** was enlarged. \_\_\_\_\_  
\_\_\_\_\_

18. To relieve his symptoms related to urinary retention, Bill's urologist performed a **transurethral resection** of his enlarged prostate gland. \_\_\_\_\_

19. Although the small intestine is longer (20 feet) than the large intestine (5 feet), the **diameter** of the large intestine (colon) is greater. \_\_\_\_\_

**K** Refer to Table 1-1, page 10, to form the plurals of the following terms.

1. psychosis \_\_\_\_\_

2. ovum \_\_\_\_\_

3. vertebra \_\_\_\_\_

4. bronchus \_\_\_\_\_

5. spermatozoon \_\_\_\_\_

6. apex \_\_\_\_\_

**L** In the following medical vignettes, circle the bold term that best completes the meaning of the sentences.

1. Selma ate a spicy meal at an Indian restaurant. Later that night she experienced (**osteoarthritis, dermatitis, gastroenteritis**). Fortunately the cramping and diarrhea subsided by morning.

2. Christina was feeling very sluggish, both physically and mentally. Her hair seemed coarse, she had noticed weight gain in the past weeks, and she had hot and cold intolerance. Her internist ordered a blood test that revealed low levels of a hormone normally secreted from a gland in the neck. She was referred to a specialist, a/an (**gynecologist, endocrinologist, pathologist**). The physician ordered a blood test that confirmed low levels of the hormone. The diagnosis of (**hypothyroidism, hyperthyroidism, psychosis**) was thus made, and proper treatment prescribed.

3. Dr. Fischer examined the lump in Bruno's thigh. An imaging technique using magnetic waves and radio signals (MRI scan) revealed a suspicious mass in the soft connective tissue of the thigh. Suspecting a cancerous mass of flesh tissue, or (**hematoma, carcinoma, sarcoma**), Dr. Fischer ordered a/an (**prognosis, biopsy, autopsy**) of the mass.

4. On her seventh birthday, Susie fell down during her birthday party. Her mother noticed bruises on Susie's knees and elbows that seemed to "come up overnight." Her pediatrician ordered a blood test, which demonstrated a decreased platelet count and an elevated (**leukocyte, erythrocyte, thrombocyte**) count at 40,000 cells. Susie was referred to a/an (**dermatologist, nephrologist, oncologist**), who made a diagnosis of (**hepatitis, anemia, leukemia**).
5. When Mr. Saluto collapsed and died while eating dinner, the family requested a/an (**laparotomy, gastroscopy, autopsy**) to determine the cause of death. The (**hematologist, pathologist, gastroenterologist**) discovered that Mr. Saluto had died of a (**cardiovascular accident, dysentery, cerebrovascular accident**), otherwise known as a stroke.

## ANSWERS TO EXERCISES

### A

- |  |   |
|--|---|
| 1. Tumor of a gland                                    | 7. Instrument to visually examine the urinary bladder     |
| 2. Inflammation of a joint                             | 8. Pertaining to the cerebrum (largest part of the brain) |
| 3. Process of viewing living tissue under a microscope | 9. Pertaining to the head                                 |
| 4. Study of (process of study of) the heart            | 10. Inflammation of a gland                               |
| 5. Pertaining to the skin                              |   |
| 6. Study of (process of study of) cells                |   |

### B

- |                         |                      |
|-------------------------|----------------------|
| 1. hematoma             | 6. gynecology        |
| 2. erythrocyte          | 7. electrocardiogram |
| 3. enteritis            | 8. diagnosis         |
| 4. prognosis            | 9. hemoglobin        |
| 5. electroencephalogram | 10. hepatitis        |

### C

- |   |   |
|---|---|
| 1. abdomen: incision of the abdomen (this is also called exploratory surgery) | 5. bone: incision (to cut into, section) of a bone              |
| 2. kidney: excision (removal, resection) of the kidney                        | 6. kidney: pertaining to the kidney                             |
| 3. nerve: inflammation of a nerve   | 7. nose: inflammation of the nose                               |
| 4. eye: instrument to visually examine the eye                                | 8. flesh tissue: tumor (cancerous or malignant) of flesh tissue |

### D

- |  |  |
|--|--|
| 1. Specialist in the study of tumors (cancerous or malignant tumors)                   | 6. Inflammation of the stomach   |
| 2. Specialist in the study of disease (examines biopsy samples and performs autopsies) | 7. Tumor of a gland (this is a benign or harmless tumor). An adenocarcinoma is a malignant tumor (CARCIN/O means cancerous). |
| 3. Abnormal condition of the mind  | 8. Abnormal condition of clotting (occurring in a blood vessel)  |
| 4. White blood cell  |  |
| 5. Clotting cell or platelet   |  |

### E

- |   |                            |
|---|----------------------------|
| 1. cell   | 6. record                  |
| 2. condition, process                                   | 7. pain; condition of pain |
| 3. process of cutting out, excision, resection, removal | 8. inflammation            |
| 4. pertaining to  | 9. protein                 |
| 5. condition of blood (blood condition)                 | 10. pertaining to          |

## F

- |   |                  |
|---|------------------|
| 1. neuralgia                            | 6. laparoscopy   |
| 2. leukemia                             | 7. arthrotomy    |
| 3. arthrogram                           | 8. dermatosis    |
| 4. nephrology                           | 9. dermatitis    |
| 5. hepatoma or hepatocellular carcinoma | 10. hematologist |

## G

- |                                       |                                       |
|---------------------------------------|---------------------------------------|
| 1. excessive, above, more than normal | 7. out, outside                       |
| 2. under, below                       | 8. self                               |
| 3. abnormal, bad, difficult, painful  | 9. below, deficient, less than normal |
| 4. across, through                    | 10. within, in, inner                 |
| 5. behind, back                       | 11. surrounding                       |
| 6. complete, through                  |                                       |

## H

- |   |  |
|---|--|
| 1. Examination of a dead body to determine the cause of death   | 6. Blood condition of decreased sugar (lower-than-normal levels)                               |
| 2. Excessive activity of the thyroid gland  | 7. Organs that produce (secrete) chemicals to the outside of the body (through tubes or ducts) |
| 3. Deficiency of hemoglobin or numbers of red blood cells; literally, "no" (AN-) "blood" (-EMIA)  | 8. Removal (excision) of an organ or structure   |
| 4. Condition of painful intestines; marked by inflammation, abdominal pain, and frequent and bloody stools and often caused by bacteria | 9. Pertaining to through the skin  |
| 5. Organs that produce (secrete) hormones directly into the bloodstream   | 10. Blood condition of increased sugar (higher than normal levels)                             |

## I

- |                              |                     |
|------------------------------|---------------------|
| 1. subgastric or hypogastric | 6. retrogastric     |
| 2. gastralgia                | 7. gastroenterology |
| 3. gastritis                 | 8. gastrotomy       |
| 4. transgastric              | 9. gastrectomy      |
| 5. gastroscopy               | 10. gastroscope     |

## J

- |  |   |
|--|---|
| 1. Specialist in the study (and treatment) of tumors                   | 11. Stroke; trauma to blood vessels of the brain (cerebrum)   |
| 2. Prediction of the outcome of an illness or treatment                | 12. Red blood cells   |
| 3. Inflammation of bones and joints (including degeneration of joints) | 13. Increase in cancerous (malignant) white blood cells in blood and bone marrow                              |
| 4. Specialist in the study of disease                                  | 14. Clotting cells  |
| 5. Abnormal condition of clotting (clot formation)                     | 15. Deficiency of hemoglobin and/or decrease in number of red blood cells; results in reduced oxygen to cells |
| 6. Blood condition of increased sugar (high blood sugar)               | 16. Pertaining to through the skin  |
| 7. Abnormal condition of the mind                                      | 17. Gland in males located in front of the urinary bladder (the prostate is an exocrine gland)                |
| 8. Visual examination of the abdomen                                   | 18. Removal of portions of the prostate gland through the urethra (procedure is called TURP)                  |
| 9. Condition of increased secretion of hormone from the thyroid gland  | 19. Measurement of the width across a circle  |
| 10. Condition of painful intestines                                    |   |

## K

- |  |   |
|--|---|
| 1. psychoses (drop <b>-is</b> and add <b>-es</b> ) | 4. bronchi (drop <b>-us</b> and add <b>-i</b> )     |
| 2. ova (drop <b>-um</b> and add <b>-a</b> )        | 5. spermatozoa (drop <b>-on</b> and add <b>-a</b> ) |
| 3. vertebrae (add <b>-e</b> )                      | 6. apices (drop <b>-ex</b> and add <b>-ices</b> )   |

## L

- |                                    |   |
|------------------------------------|---|
| 1. gastroenteritis                 | 4. leukocyte, oncologist, leukemia                |
| 2. endocrinologist, hypothyroidism | 5. autopsy, pathologist, cerebrovascular accident |
| 3. sarcoma, biopsy                 |   |

## PRONUNCIATION OF TERMS

The terms that you have learned in this chapter are presented here with their pronunciations. The capitalized letters in **BOLDFACE** indicate the accented syllable. Pronounce each word out loud; then write the meaning in the space provided. All meanings of terms are found in the **Mini-Dictionary** beginning on page 349, and on the audio section of the *Evolve* site (<http://evolve.elsevier.com/Chabner/medtermshort>). After you write all of the meanings, it is a good idea to cover the Term column and write each term from its meaning.

Term	Pronunciation	Meaning
adenitis	ad-eh- <b>NI</b> -tis _____	
adenoma	ah-deh- <b>NO</b> -mah _____	
anemia	ah- <b>NE</b> -me-ah _____	
arthralgia	ar- <b>THRAL</b> -jah _____	
arthritis	ar- <b>THRI</b> -tis _____	
arthrogram	<b>AR</b> -thro-gram _____	
arthroscope	<b>AR</b> -thro-skope _____	
arthroscopy	ar- <b>THROS</b> -ko-pe _____	
autopsy	<b>AW</b> -top-se _____	
biology	bi- <b>OL</b> -o-je _____	
biopsy	<b>BI</b> -op-se _____	
carcinoma	kar-sih- <b>NO</b> -mah _____	
cardiac	<b>KAR</b> -de-ak _____	
cardiology	kar-de- <b>OL</b> -o-je _____	
cephalic	seh- <b>FAL</b> -ik _____	
cerebral	seh- <b>RE</b> -bral _____	

cerebrovascular accident	seh-re-bro- <b>VAS</b> -ku-lar <b>AK</b> -sih-dent _____
cystoscope	<b>SIS</b> -to-skope _____
cystoscopy	sis- <b>TOS</b> -ko-pe _____
cytology	si- <b>TOL</b> -o-je _____
dermal	<b>DER</b> -mal _____
dermatitis	der-mah- <b>TI</b> -tis _____
dermatosis	der-mah- <b>TO</b> -sis _____
diagnosis	di-ag- <b>NO</b> -sis _____
diameter	di- <b>AM</b> -eh-ter _____
dysentery	<b>DIS</b> -en-teh-re _____
electrocardiogram	e-lek-tro- <b>KAR</b> -de-o-gram _____
electroencephalogram	e-lek-tro-en- <b>SEF</b> -ah-lo-gram _____
endocardium	en-do- <b>KAR</b> -de-um _____
endocrine glands	<b>EN</b> -do-krin glanz _____
endocrinology	en-do-krih- <b>NOL</b> -o-je _____
enteritis	en-teh- <b>RI</b> -tis _____
erythrocyte	eh- <b>RITH</b> -ro-site _____
exocrine glands	<b>EK</b> -so-krin glanz _____
gastrectomy	gas- <b>TREK</b> -to-me _____
gastric	<b>GAS</b> -trik _____
gastritis	gas- <b>TRI</b> -tis _____
gastroenteritis	gas-tro-en-teh- <b>RI</b> -tis _____
gastroenterology	gas-tro-en-ter- <b>OL</b> -o-je _____
gastroscope	<b>GAS</b> -tro-skope _____

gastroscopy	gas- <b>TROS</b> -ko-pe _____
gastrotomy	gas- <b>TROT</b> -o-me _____
gynecologist	gi-neh- <b>KOL</b> -o-jist _____
gynecology	gi-neh- <b>KOL</b> -o-je _____
hematoma	he-mah- <b>TO</b> -mah _____
hemoglobin	<b>HE</b> -mo-glo-bin _____
hepatitis	hep-ah- <b>TI</b> -tis _____
hepatoma	hep-ah- <b>TO</b> -mah _____
hyperglycemia	hi-per-gli- <b>SE</b> -me-ah _____
hyperthyroidism	hi-per- <b>THI</b> -royd-izm _____
hypoglycemia	hi-po-gli- <b>SE</b> -me-ah _____
hypothyroidism	hi-po- <b>THI</b> -royd-izm _____
laparoscope	<b>LAP</b> -ah-ro-skope _____
laparoscopy	lap-ah- <b>ROS</b> -ko-pe _____
laparotomy	lap-ah- <b>ROT</b> -o-me _____
leukemia	loo- <b>KE</b> -me-ah _____
leukocyte	<b>LOO</b> -ko-site _____
leukocytosis	loo-ko-si- <b>TO</b> -sis _____
nephrectomy	neh- <b>FREK</b> -to-me _____
nephrology	neh- <b>FROL</b> -o-je _____
nephrosis	neh- <b>FRO</b> -sis _____
neural	<b>NU</b> -ral _____
neuralgia	nu- <b>RAL</b> -jah _____
neuritis	nu- <b>RI</b> -tis _____

neurology	nu- <b>ROL</b> -o-je _____
neurotomy	nu- <b>ROT</b> -o-me _____
oncologist	ong- <b>KOL</b> -o-jist _____
ophthalmoscope	of- <b>THAL</b> -mo-skope _____
osteitis	os-te- <b>I</b> -tis _____
osteoarthritis	os-te-o-ar- <b>THRI</b> -tis _____
pathologist	pah- <b>THOL</b> -o-jist _____
pericardium	peh-rih- <b>KAR</b> -de-um _____
platelet	<b>PLAYT</b> -let _____
prognosis	prog- <b>NO</b> -sis _____
prostate gland	<b>PROS</b> -tayt gland _____
psychosis	si- <b>KO</b> -sis _____
renal	<b>RE</b> -nal _____
resection	re- <b>SEK</b> -shun _____
retrogastric	reh-tro- <b>GAS</b> -trik _____
rhinitis	ri- <b>NI</b> -tis _____
rhinotomy	ri- <b>NOT</b> -o-me _____
sarcoma	sar- <b>KO</b> -mah _____
subgastric	sub- <b>GAS</b> -trik _____
subhepatic	sub-heh- <b>PAT</b> -ik _____
thrombocyte	<b>THROM</b> -bo-site _____
thrombosis	throm- <b>BO</b> -sis _____
transdermal	tranz- <b>DER</b> -mal _____
transgastric	tranz- <b>GAS</b> -trik _____
transurethral	tranz-u- <b>RE</b> -thral _____

## PRACTICAL APPLICATIONS

### MEDICAL CONDITIONS AND SPECIALISTS

Match the following physician specialists with the condition each would treat.

cardiologist  
dermatologist  
endocrinologist  
gastroenterologist  
gynecologist

hematologist  
neurologist  
oncologist  
ophthalmologist  
urologist

1. Cerebrovascular accident \_\_\_\_\_
2. Skin cancer \_\_\_\_\_
3. Dysentery \_\_\_\_\_
4. Anemia \_\_\_\_\_
5. Lung cancer \_\_\_\_\_
6. Prostate gland enlargement \_\_\_\_\_
7. Hyperglycemia \_\_\_\_\_
8. Cataract (clouding of the lens of the eye) \_\_\_\_\_
9. Heart attack \_\_\_\_\_
10. Abnormal bleeding of the uterus from the vagina \_\_\_\_\_

## WHAT'S YOUR DIAGNOSIS?

### Case Study

This seven-year-old boy presents with fever, sore throat, runny nose, and persistent fatigue [feeling of being tired all the time]. Physical examination reveals multiple bruises [contusions] of his lower extremities and arms, an erythematous [red] pharynx [throat] with white plaques on the tonsils, and pale gums, lips, and nailbeds. CBC [complete blood count] was performed. Increasing fever prompted immediate admission to the children's ward of the hospital.

During the course of admission, the patient's pharyngitis was monitored and subsided. Tonsillitis was ruled out. Fatigue and contusions on his arms and legs were noted and addressed with the parents while taking his social history. A lab hematologist reviewed the high WBC [white blood cell] count, and a WBC differential [percentages of the various types of these cells] shows immature cells. A bone marrow biopsy confirms the diagnosis of WBC malignancy.

Using the information presented in this case study, what's your diagnosis?

- A. Hyperthyroidism
- B. Leukemia
- C. Fever
- D. Contusions—arms/legs
- E. Leukocytosis

## ANSWERS TO PRACTICAL APPLICATIONS

### MEDICAL CONDITIONS AND SPECIALISTS

- |                       |                    |
|-----------------------|--------------------|
| 1. neurologist        | 6. urologist       |
| 2. dermatologist      | 7. endocrinologist |
| 3. gastroenterologist | 8. ophthalmologist |
| 4. hematologist       | 9. cardiologist    |
| 5. oncologist         | 10. gynecologist   |

### WHAT'S YOUR DIAGNOSIS?

Answer: B. Leukemia

## PICTURE SHOW

Answer the questions that follow each image. Answers are found on [page 41](#).

**A**

**Blood smear.** (Modified from Carr JH, Rodak BF: Clinical Hematology Atlas, Philadelphia, 1999, Saunders.)

- The arrows in this photo of a blood smear are pointing to cells that are necessary in blood clotting. These cells are:
  - leukocytes
  - thrombosis
  - platelets
  - erythrocytes
- The other blood cells in the photo contain a protein that helps the cell carry oxygen. These cells are:
  - leukocytes
  - thrombosis
  - platelets
  - erythrocytes
- The protein contained in the cells is:
  - hemoglobin
  - anemia
  - sarcoma
  - carcinoma

**B**

(From Miller MD, Howard RF, Plancher KD: Surgical Atlas of Sports Medicine, Philadelphia, 2003, Saunders.)

- The image shows a minimally invasive procedure used to visually examine the knee. This procedure is:
  - laparotomy
  - arthroscopy
  - laparoscopy
  - arthrectomy

C

**Blood smear.** (Courtesy Dr. Robert W. McKenna, Department of Pathology, University of Texas Southwestern Medical School, Dallas, Texas; from Kumar V, Cotran RS, Robbins SL, editors: Basic Pathology, ed 8, Philadelphia, 2007, Saunders.)

- In this blood smear, the arrows point to an increased number of large, immature cells (that would normally fight infection). These cells are:
  - hepatocytes
  - erythrocytes
  - thrombocytes
  - leukocytes
- The name of the abnormal condition in which these cells predominate is:
  - iron deficiency anemia
  - sickle cell anemia
  - leukemia
  - hyperglycemia

D

(From Forbes CD, Jackson WF: Color Atlas and Text of Clinical Medicine, ed 3, London, 2003, Mosby.)

- Notice that the left leg of the patient is swollen (edema), resulting from blood flow that is slow and sluggish. Fluid seeps out of tiny vessels into tissue spaces. The abnormal condition often associated with this problem is caused by a blood clot in a blood vessel. The condition is called:
  - hyperglycemia
  - deep vein thrombosis
  - cerebrovascular accident
  - hematoma

**E**

1. The lesion pictured in A is a/an:
 

a. hepatoma	c. adenoma
b. sarcoma of muscle	d. basal cell carcinoma
  
2. The lesion pictured in B is a/an:
 

a. hepatoma	c. adenoma
b. sarcoma of muscle	d. basal cell carcinoma

**F**

*(Courtesy American Rheumatism Association; from Noble J: Textbook of Primary Care Medicine, ed 3, St. Louis, 2001, Mosby.)*

1. The image in A shows degeneration of the hip (pelvic) joint with narrowed joint spaces (see arrow). The image in B shows a normal hip for comparison (see arrow). The patient with the hip changes has arthralgia, stiffness, and joint tenderness. Your diagnosis?
 

a. osteoarthritis	c. hyperthyroidism
b. gastroenteritis	d. osteogenic sarcoma

1

**ANSWERS TO PICTURE SHOW**

- |               |      |      |                    |
|---------------|------|------|--------------------|
| <b>A</b> 1. c | 2. d | 3. a | <b>D</b> 1. b      |
| <b>B</b> 1. b |      |      | <b>E</b> 1. b 2. d |
| <b>C</b> 1. d | 2. c |      | <b>F</b> 1. a      |

## REVIEW

Here is your chance to test your understanding of all the **combining forms, suffixes, and prefixes** that you have studied in this chapter. Write the meaning of each term in the space provided and **check** your answers with the Answers to Review section on [page 44](#). All of the meanings for word parts are found in **Glossary of Word Parts** beginning on [page 385](#). **Remember the 3 “Rs”—wRite, Repeat, Review.**

### COMBINING FORMS

Combining Form	Meaning	Combining Form	Meaning
1. aden/o	_____	18. gnos/o	_____
2. arthr/o	_____	19. gynec/o	_____
3. bi/o	_____	20. hem/o, hemat/o	_____
4. carcin/o	_____	21. hepat/o	_____
5. cardi/o	_____	22. lapar/o	_____
6. cephal/o	_____	23. leuk/o	_____
7. cerebr/o	_____	24. nephr/o	_____
8. crin/o	_____	25. neur/o	_____
9. cyst/o	_____	26. onc/o	_____
10. cyt/o	_____	27. ophthalm/o	_____
11. derm/o, dermat/o	_____	28. oste/o	_____
12. electr/o	_____	29. path/o	_____
13. encephal/o	_____	30. psych/o	_____
14. enter/o	_____	31. ren/o	_____
15. erythr/o	_____	32. rhin/o	_____
16. gastr/o	_____	33. sarc/o	_____
17. glyc/o	_____	34. thromb/o	_____

## SUFFIXES

Suffix	Meaning	Suffix	Meaning
1. -al	_____	11. -logist	_____
2. -algia	_____	12. -logy	_____
3. -cyte	_____	13. -oma	_____
4. -ectomy	_____	14. -opsy	_____
5. -emia	_____	15. -osis	_____
6. -globin	_____	16. -scope	_____
7. -ia	_____	17. -scopy	_____
8. -ic	_____	18. -sis	_____
9. -ism	_____	19. -tomy	_____
10. -itis	_____		

## PREFIXES

Prefix	Meaning	Prefix	Meaning
1. a-, an-	_____	8. hypo-	_____
2. aut-	_____	9. peri-	_____
3. dia-	_____	10. pro-	_____
4. dys-	_____	11. re-	_____
5. endo-	_____	12. retro-	_____
6. exo-	_____	13. sub-	_____
7. hyper-	_____	14. trans-	_____

## ANSWERS TO REVIEW

### COMBINING FORMS

- |                       |  |              |
|-----------------------|--|--------------|
| 1. gland              | 13. brain                              | 24. kidney   |
| 2. joint              | 14. intestines (often small intestine) | 25. nerve    |
| 3. life               | 15. red                                | 26. tumor    |
| 4. cancer (cancerous) | 16. stomach                            | 27. eye      |
| 5. heart              | 17. sugar                              | 28. bone     |
| 6. head               | 18. knowledge                          | 29. disease  |
| 7. cerebrum           | 19. woman, female                      | 30. mind     |
| 8. secrete            | 20. blood                              | 31. kidney   |
| 9. urinary bladder    | 21. liver                              | 32. nose     |
| 10. cell              | 22. abdomen                            | 33. flesh    |
| 11. skin              | 23. white                              | 34. clotting |
| 12. electricity       |  |              |

### SUFFIXES

- |                                   |                                  |                                    |
|-----------------------------------|----------------------------------|------------------------------------|
| 1. pertaining to                  | 8. pertaining to                 | 15. abnormal condition             |
| 2. pain (condition of)            | 9. condition; process            | 16. instrument to visually examine |
| 3. cell                           | 10. inflammation                 | 17. process of visual examination  |
| 4. cutting out; removal; excision | 11. specialist in the study of   | 18. state of                       |
| 5. blood condition                | 12. study of                     | 19. cutting into; incision         |
| 6. protein                        | 13. tumor, mass                  |                                    |
| 7. condition                      | 14. to view (process of viewing) |                                    |

### PREFIXES

- |                                      |  |                     |
|--------------------------------------|--|---------------------|
| 1. no, not                           | 6. out, outside                          | 10. before          |
| 2. self                              | 7. excessive, more than normal, too much | 11. back            |
| 3. complete, through                 | 8. below, less than normal, under        | 12. behind          |
| 4. bad, painful, difficult, abnormal | 9. surrounding                           | 13. below, under    |
| 5. within                            |  | 14. across, through |

## TERMINOLOGY CHECKUP

*Before you leave this chapter, here are important concepts that you should thoroughly understand. In your own words, write the answers on the lines provided. Confirm your answers on the next page. Check the box next to each item when you know you've "got" it!*

1. What is the difference between **endocrine glands** and **exocrine glands**. Give an example of each.

---

---

---

2. What is the difference between a **diagnosis** and a **prognosis**?

---

---

---

3. What is the difference between a **carcinoma** and a **sarcoma**? Give an example of each.

---

---

---

4. What is the difference between **anemia**, **leukemia**, and **leukocytosis**?

---

---

---

5. What is the difference between **laparotomy** and **laparoscopy**?

---

---

---

## ANSWERS TO TERMINOLOGY CHECKUP

1. **Endocrine glands** secrete chemicals called *hormones within* the body. Examples are **thyroid, pituitary, and adrenal glands**.  
**Exocrine glands** secrete chemicals to the *outside* of the body through ducts. Examples are **sweat, tear, and salivary glands**.
2. A **diagnosis** is complete knowledge gained after examining and performing tests on a patient.  
A **prognosis** is a prediction made after the diagnosis. It forecasts and describes the likely *outcome* of an illness.
3. A **carcinoma** is a cancerous tumor arising from lining cells of internal organs. An example is an **adenocarcinoma**.  
A **sarcoma** is also a cancerous tumor, but arising from bone, cartilage, muscle, and fat (connective tissues). An example is an **osteosarcoma**.
4. **Anemia** is deficiency of red blood cells (erythrocytes) or deficiency in hemoglobin within red blood cells.  
**Leukemia** is a cancerous condition of high numbers of abnormal white blood cells (leukocytes).  
**Leukocytosis** is only a slight increase in normal white blood cells as a response to infection.
5. A **laparotomy** is a large *incision* of the abdomen to explore or remove organs and tissues.  
A **laparoscopy** is *visual examination of the abdomen* using small incisions for insertion of instruments (laparoscope) to view and remove organs and tissues.

## CHAPTER OBJECTIVES

- To name the body systems and their functions
- To identify body cavities and specific organs within them
- To list the divisions of the back
- To identify the three planes of the body
- To analyze, pronounce, and spell new terms
- To apply medical terms in real-life situations

## INTRODUCTION

All the parts of your body are composed of individual units called **cells**. Examples are muscle, nerve, epithelial (skin, and lining of internal organs and cavities), and bone cells.

Similar cells grouped together are **tissues**. Groups of muscle cells are muscle tissue, and groups of epithelial cells are epithelial tissue.

Collections of different tissues working together are **organs**. An organ, such as the stomach, has specialized tissues, such as muscle, epithelial, and nerve, that help the organ function.

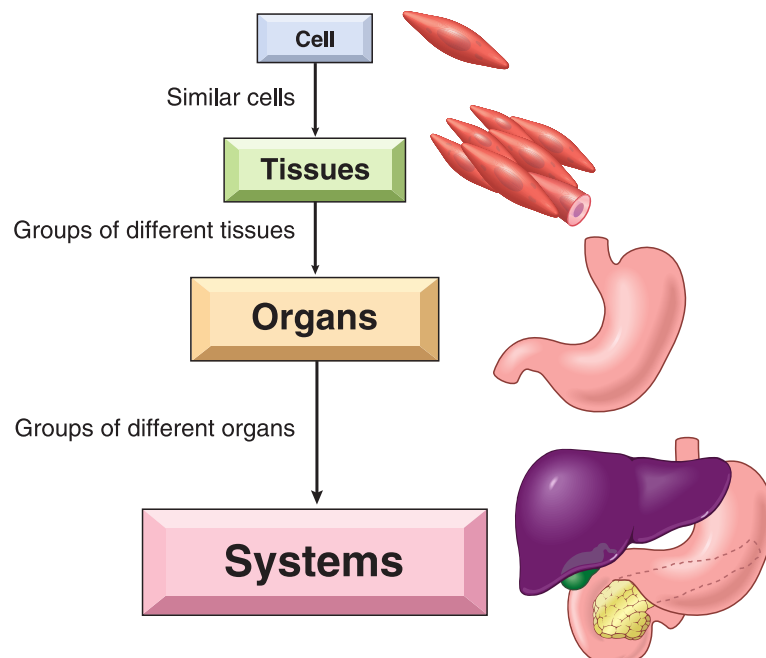

Groups of organs working together are the **systems** of the body. The digestive system, for example, includes the mouth, throat (pharynx), esophagus, stomach, and intestines, which bring food into the body, break it down, and deliver it to the bloodstream.

**Figure 2-1** reviews the differences between cells, tissues, organs, and systems.

## BODY SYSTEMS

There are 11 systems of the body, and each plays an important role in the way the body works.

The **circulatory system** (heart, blood, and blood vessels such as arteries, veins, and capillaries) transports blood (containing all types of blood cells) throughout the body. The **lymphatic system** includes lymph vessels, and nodes that carry a clear fluid called lymph. Lymph contains white blood cells called lymphocytes that fight against disease and play an important role in immunity.

**FIGURE 2-1** Cells, tissues, organs, and systems.

The **digestive system** brings food into the body and breaks it down so that it can enter the bloodstream. Food that cannot be broken down is then removed from the body at the end of the system as waste. Organs in the digestive system include the mouth, stomach, and intestines.

The **endocrine system**, composed of glands, sends chemical messengers called hormones into the blood to act on other glands and organs. Examples of endocrine glands are the thyroid gland, adrenal glands, and pituitary gland.

The **female and male reproductive systems** produce the cells (eggs and sperm) that join to form the embryo, which develops in the uterus of a female. Male (testes) and female (ovaries) sex organs produce hormones as well.

The **musculoskeletal system**, including muscles, bones, joints, and other connective tissues such as cartilage, supports the body and allows it to move.

The **nervous system** carries electrical messages to and from the brain and spinal cord.

The **respiratory system** controls breathing, a process by which air enters and leaves the body. Organs of the respiratory system include the trachea (windpipe), bronchial tubes and lungs.

The **skin and sense organ system**, including the skin and eyes and ears, receives messages from the environment and sends them to the brain. The retina is a layer of sensitive receptor tissue in the back of the eye.

The **urinary system** produces urine and sends it out of the body through the kidneys, ureters, bladder, and urethra.

You can find a table of specific organs/structures and the systems to which they belong on the Evolve site for Chapter 2 in the resources section.

In a separate section of this book, you will find useful information about each body system, with diagrams, terminology, pathology, laboratory tests, and diagnostic and treatment procedures.

At the end of the book, you will find helpful information. Use these resources as you study:

- **Appendix 1, Body Systems**, [page 215](#)
- **Appendix 2, Diagnostic Tests and Procedures**, [page 295](#)
- **Appendix 3, Abbreviations, Acronyms, Symbols, and Eponyms**, [page 317](#)
- **Appendix 4, Quick Drug Reference**, [page 335](#)
- **Appendix 5, Health Careers Information**, [page 339](#)
- **Mini-Dictionary**, [page 349](#)
- **Glossary of Word Parts**, [page 385](#)
- **Glossary of English–Spanish Terms**, [page 403](#)

**FIGURE 2-2** Body cavities. (Modified from Chabner D-E: *The Language of Medicine*, ed 11, St. Louis, 2017, Elsevier.)

## BODY CAVITIES

Figure 2-2 shows the five body cavities. A body cavity is a space that contains organs. Label the figure in the spaces provided as you read the following paragraphs.

The **cranial cavity** (1) is located in the head and surrounded by the skull (CRANI/O means skull). The cranial cavity contains the brain and other organs, such as the pituitary gland (an endocrine gland located below the brain).

The **thoracic cavity** (2), also known as the chest cavity (THORAC/O means chest), is surrounded by the breastbone and ribs. The lungs, heart, windpipe (trachea), bronchial tubes (leading from the trachea to the lungs), and other organs are in this cavity.

Figure 2-3 shows a front view of the thoracic cavity. The lungs are each surrounded by a double membrane known as the **pleura**. The space between the pleural membranes is the **pleural cavity**. The large area between the lungs (yellow in Figure 2-3) is the **mediastinum**. The heart, esophagus (food tube), trachea, and bronchial tubes are organs within the mediastinum.

In Figure 2-2, the **abdominal cavity** (3) is the space below the thoracic cavity. The **diaphragm** is the muscle that separates the abdominal and thoracic cavities. Organs in the abdomen include the stomach, liver, gallbladder, and small and large intestines.

**FIGURE 2-3** Thoracic cavity.

**FIGURE 2-4** The **peritoneum** (side view) is a double membrane surrounding the organs (including the liver, stomach, small and large intestines) in the abdomen. The **peritoneal cavity** is the space between the peritoneal membranes. The **retroperitoneal area** is behind the peritoneum. The kidneys are in the retroperitoneal cavity.

The organs in the abdomen are covered by a double membrane called the **peritoneum** (Figure 2-4). The peritoneum attaches the abdominal organs to the abdominal muscles and surrounds each organ to hold it in place. 

Turn back to Figure 2-2 and locate the **pelvic cavity** (4), below the abdominal cavity. The pelvic cavity is surrounded by the **pelvis** (bones of the hip). The major organs located within the pelvic cavity are the urinary bladder, ureters (tubes from the kidneys to the bladder), urethra (tube from the bladder to the outside of the body), rectum, and anus, and the uterus (muscular organ that nourishes the developing embryo and fetus) in females.

Label the **spinal cavity** (5) on Figure 2-2. This is the space surrounded by the **spinal column** (backbones). The **spinal cord** is the nervous tissue within the spinal cavity. Nerves enter and leave the spinal cord and carry messages to and from all parts of the body.

### Double membranes

You can visualize the way organs are surrounded by a double membrane by imagining your fist pushing deep into a soft balloon. The balloon is then in two layers folded over your fist, just the way the pleura surrounds the lungs and the peritoneum surrounds the abdominal organs. Double wrapping around organs provides protection and cushioning, as well as a site for attachment to muscles. In the event of inflammation or disease of organs or membranes, fluid may collect in the space between the membranes surrounding the organs. This collection of fluid in the pleural cavity is called a **pleural effusion**. A collection of fluid in the peritoneal cavity is called **ascites** (see page 63).

As a quick review of the terms presented in this section, match the term with its meaning and write it in the space provided.

Term	Meaning
<b>Abdominal cavity</b>	1. Membrane surrounding the lungs _____
<b>Cranial cavity</b>	2. Space between the lungs, containing the heart
<b>Diaphragm</b>	_____
<b>Mediastinum</b>	3. Bones of the hip _____
<b>Pelvic cavity</b>	4. Space containing the liver, gallbladder, and stomach;
<b>Pelvis</b>	also called the abdomen _____
<b>Peritoneum</b>	5. Space within the backbones, containing the spinal cord
<b>Pleura</b>	_____
<b>Spinal cavity</b>	6. Membrane surrounding the organs in the abdomen
<b>Thoracic cavity</b>	_____
	7. Space within the skull, containing the brain
	_____
	8. Space below the abdominal cavity, containing the urinary bladder _____
	9. Muscle between the thoracic and abdominal cavities
	_____
	10. Entire chest cavity, containing the lungs, heart, trachea, esophagus, and bronchial tubes _____
	_____

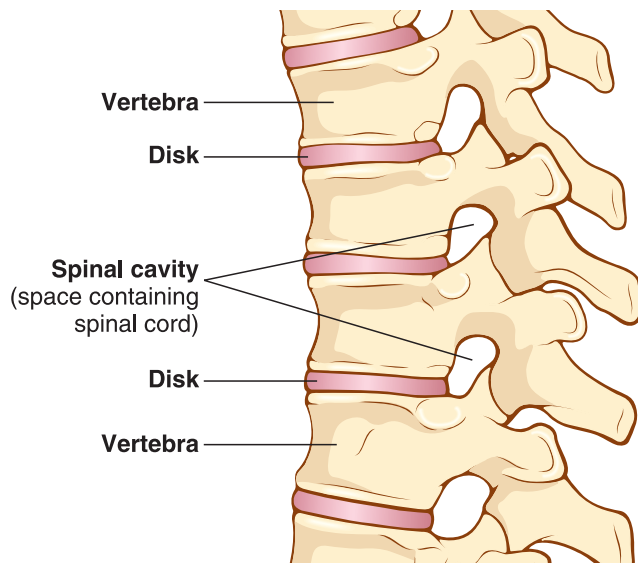

## DIVISIONS OF THE BACK

The **spinal column** is a long row of bones from the neck to the tailbone. Each bone in the spinal column is called a **vertebra (backbone)**. Two or more bones are called **vertebrae**.

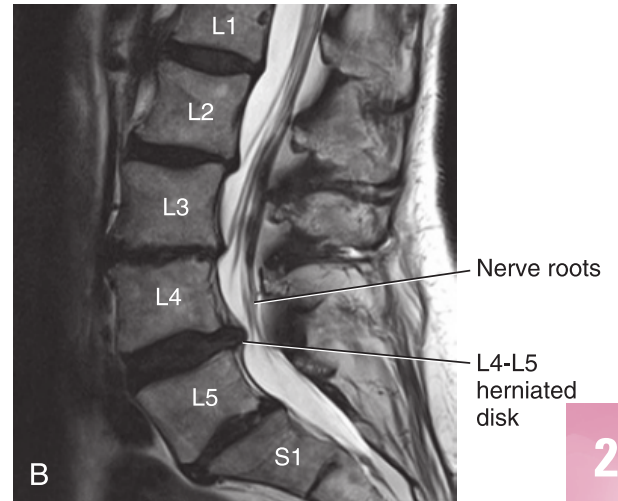

A piece of flexible connective tissue, called a **disk (or disc)**, lies between each backbone. The disk, composed of **cartilage**, is a cushion between the bones. If the disk slips or moves out of its place, it can press on the nerves that enter or leave the spinal cord, causing pain. [Figure 2-5](#) shows a side view of vertebrae and disks.

The divisions of the spinal column are pictured in [Figure 2-6](#). Label them according to the following list:

Division	Bones	Abbreviation
1. <b>Cervical</b> (neck) region	7 bones	<b>C1-C7</b>
2. <b>Thoracic</b> (chest) region	12 bones	<b>T1-T12</b>
3. <b>Lumbar</b> (loin or waist) region	5 bones	<b>L1-L5</b>
4. <b>Sacral</b> (sacrum or lower back) region	5 fused bones	<b>S1-S5</b>
5. <b>Coccygeal</b> (coccyx or tailbone) region	4 fused bones	

**FIGURE 2-5** Vertebrae and disks (discs).

2

**FIGURE 2-6** A, Divisions of the back (spinal column). B, MRI (magnetic resonance imaging) study of a herniated disk at the L4-L5 level of the spinal column. (Modified from Chabner D-E: *The Language of Medicine*, ed 11, St. Louis, 2017, Elsevier.)

## PLANES OF THE BODY

A plane is an imaginary flat surface. Organs appear in different relationships to one another according to the plane of the body in which they are viewed.

Figure 2-7 shows three planes of the body. Label them as you read the following descriptions:

- 1. Frontal (coronal) plane** A vertical plane that divides the body, or body part such as an organ, into front and back portions.

Anatomically, *anterior* means the front portion and *posterior* means the back portion.

**FIGURE 2-7** Planes of the body.

2. **Sagittal (lateral) plane** A vertical plane that divides the body or organ into right and left sides. The **midsagittal plane** divides the body vertically into right and left **halves**.
  
3. **Transverse (axial) plane** A horizontal plane that divides the body or organ into upper and lower portions, as in a **cross section**. (Think of cutting a long loaf of French bread into circular sections.)

Knowing the planes of the body is helpful in looking at imaging studies such as x-ray films (radiographs) and computed tomography (CT) scans. See [Figure 2-8](#).

**FIGURE 2-8** X-ray views of the chest. **A, Frontal (coronal) plane.** This radiographic image is an anterior-posterior view of the chest. **B, Sagittal (lateral) plane.** This is a lateral (side) x-ray view of the chest. **C, Transverse (axial) plane.** This computed tomography image is a snapshot of structures at a specific level of the body. (**A**, Modified from Black JM, Matassarini-Jacobs E: *Medical-Surgical Nursing: Clinical Management for Continuity of Care*, ed 5, Philadelphia, 1997, Saunders. **B**, Modified from Weir J, Abrahams PH: *An Imaging Atlas of Human Anatomy*, ed 2, London, 2000, Mosby. **C**, From Chabner D-E: *The Language of Medicine*, ed 11, St. Louis, 2017, Elsevier.)

**Magnetic resonance imaging (MRI)** is another technique for producing images of the body. With **MRI**, magnetic waves instead of x-rays are used to create the images, which show organs and other structures in specialized detail and in all three planes of the body (Figure 2-9). Figure 2-10 shows a patient undergoing MRI. See *In Person: CT and MRI* on page 65.

**FIGURE 2-9** Magnetic resonance images. Basic views are frontal, transverse, and sagittal. **A, Frontal (coronal) plane** of the head. **B, Transverse (axial) plane** of the head. **C, Sagittal (lateral) plane** showing the head and side of the brain. (A and B, From Frank ED, et al: *Merrill's Atlas of Radiographic Positioning and Procedures*, ed 12, St. Louis, 2012, Elsevier. C, From Reynolds PA, Abraham PH: *McMinn's Interactive Clinical Anatomy: Head and Neck*, ed 2, London, 2001, Mosby Ltd.)

**FIGURE 2-10** Patient entering an MRI unit surrounded by a superconducting 1.5-Tesla magnet. Magnetic field changes are picked up by the surrounding machine and processed by a computer to create images. For this examination, the patient must lie very still and have no metal objects on or within the body. (Courtesy GE Medical Systems, Milwaukee, Wisconsin.)

## TERMINOLOGY

Write the meanings of the medical terms on the line provided. Check your answers with the *Mini-Dictionary*, page 349.

2

## COMBINING FORMS

Combining Form	Meaning	Medical Term	Meaning
<b>abdomin/o</b>	abdomen	<u>abdominal</u> _____	
<b>anter/o</b>	front	<u>anterior</u> _____	<i>The suffix -IOR means pertaining to. See Table 2-1 for additional useful positional and directional terms.</i>
<b>bronch/o</b>	bronchial tubes (leading from the windpipe to the lungs)	<u>bronchoscopy</u> _____	<i>Pronunciation hint: bron-KOS-ko-pe</i>

TABLE 2-1 POSITIONAL AND DIRECTIONAL TERMS		
Position/Direction	Description	Example
Anterior	Front side	The nose is on the anterior of the head.
Posterior	Back side	The heel is on the posterior of the foot.
Inferior	Below	The liver is inferior to the right lung.
Superior	Above	The stomach is superior to the intestines.
Lateral	Side	The ears are lateral to the mouth.
Medial	Middle	The heart is in the medial area of the chest. (mediastinum)
Distal	Far	The distal end of the thigh bone (femur) is at the knee.
Proximal	Near	The proximal end of thigh bone (femur) is at the hip.
Deep	Away from the surface	The stab wound penetrated deep into the skin.
Superficial	On the surface	Superficial veins can be seen on the surface of the skin.
Supine	Facing up	The patient lies supine during an examination of the abdomen.
Prone	Facing down	The backbones are examined with the patient in a prone position.

**cervic/o** neck of the body or neck (cervix) of the uterus

cervical \_\_\_\_\_  
*You must decide from the context of what you are reading whether **cervical** means pertaining to the neck of the body or pertaining to the uterine cervix (lower portion of the uterus). **Figure 2-11** shows the uterus and the cervix.*

**chondr/o** cartilage (connective tissue attached to bones)

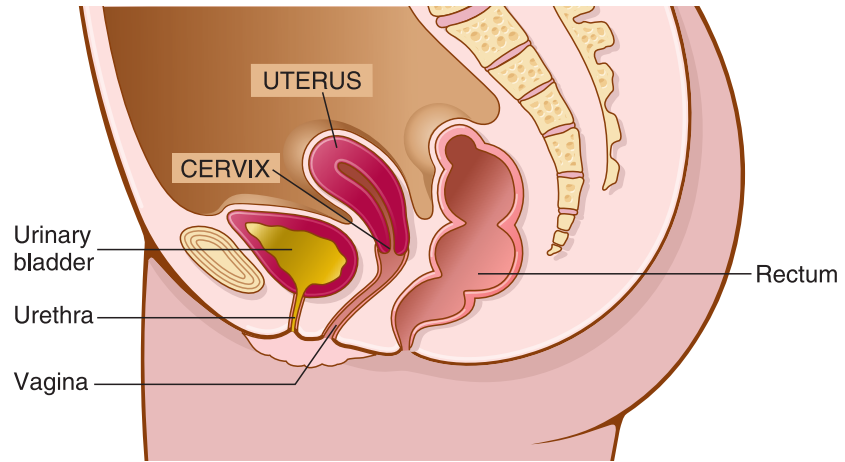

chondroma \_\_\_\_\_  
*This is a benign tumor.*

chondrosarcoma \_\_\_\_\_  
*This is a malignant tumor. The root **SARC**, meaning *flesh*, indicates that the malignant tumor arises from a type of flesh or connective tissue.*

**coccyg/o** coccyx, tailbone

coccygeal \_\_\_\_\_  
*-EAL means pertaining to.*

**FIGURE 2-11** The **uterus and cervix**. The cervix is the lower portion of the uterus opening to the vagina.

**crani/o** skull craniotomy \_\_\_\_\_

**epitheli/o** skin, surface tissue epithelial \_\_\_\_\_  
*The term **epithelial** was first used to describe the surface (EPI- means upon) of the breast nipple (THELI/O actually means nipple). More correctly, it describes the cells on the outer layer (surface) of the skin as well as the lining of the internal organs that lead to the outside of the body.*

**esophag/o** esophagus (tube from the throat to the stomach) esophageal \_\_\_\_\_

**hepat/o** liver hepatitis \_\_\_\_\_

**lapar/o** abdomen laparoscopy \_\_\_\_\_

**laryng/o** larynx (voice box) laryngeal \_\_\_\_\_  
*The larynx (pronounced **LAR**-inks) is found in the upper part of the trachea. See [Figure 2-3](#), page 51.*

laryngectomy \_\_\_\_\_

**later/o** side lateral \_\_\_\_\_

**FIGURE 2-12 Lumbar puncture (“spinal tap”).** The patient lies on his side with his knees drawn up to the abdomen and the chin brought down to the chest. This position increases the spaces between the vertebrae. The physician inserts a needle between the third and fourth (or fourth and fifth) lumbar vertebrae, and cerebrospinal fluid (CSF) is withdrawn, or medication can be injected. The end of the spinal cord is where the spinal nerves begin to fan out toward the legs. Performing a lumbar puncture below this level avoids injury to the spinal cord. (Modified from Chabner D-E: *The Language of Medicine*, ed 11, St. Louis, 2017, Elsevier.)

**lumb/o** loin (waist)

**lumbar** \_\_\_\_\_

*-AR means pertaining to. A **lumbar puncture (“spinal tap”)** is the placement of a needle within the membranes in the lumbar region of the spinal cord to inject or withdraw fluid. See [Figure 2-12](#).*

**lymph/o** lymph (clear fluid in tissue spaces and lymph vessels)

**lymphocyte** \_\_\_\_\_

*Lymphocytes are white blood cells that fight disease. One type of lymphocyte (B cell) produces disease-fighting proteins called **antibodies**.*

**mediastin/o** mediastinum (space between the lungs)

**mediastinal** \_\_\_\_\_

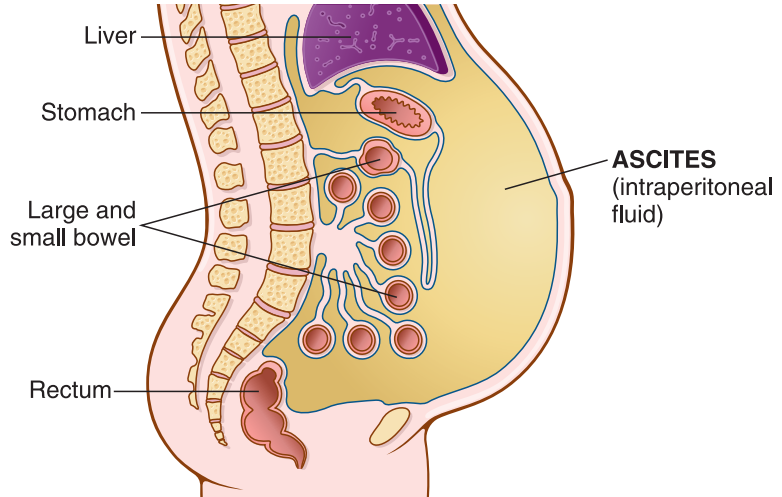

**pelv/o** pelvis (bones of the hip)

**pelvic** \_\_\_\_\_

**peritone/o** peritoneum (membrane surrounding the abdominal organs)

**peritoneal** \_\_\_\_\_

*Peritoneal fluid, produced by the peritoneum, lubricates its surfaces to prevent friction. With inflammation of the peritoneum (peritonitis), fluid may accumulate in the peritoneal cavity. This accumulation of fluid is called **ascites** (see [Figure 2-13](#)).*

**FIGURE 2-13 Ascites.** Abnormal intraperitoneal fluid can result from conditions such as liver disease, peritonitis, and ovarian cancer. (Photo from Lewis SM, Heitkemper MM, Dirksen SR: Medical-Surgical Nursing, ed 9, St. Louis, 2014, Mosby.)

**pharyng/o** pharynx (throat)

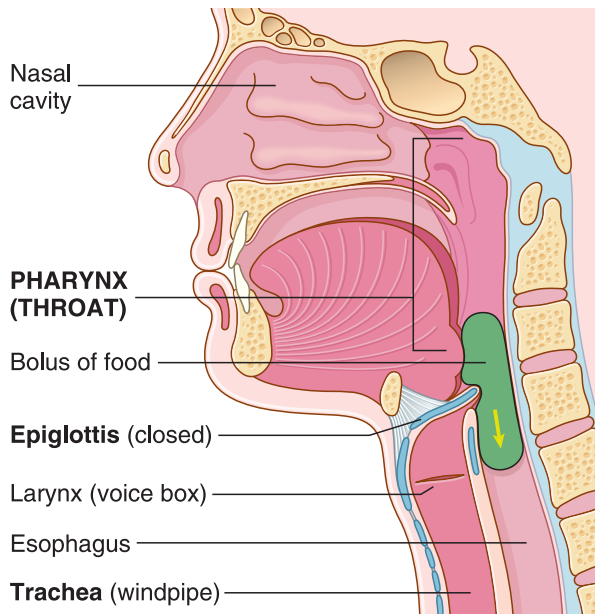

**pharyngeal** \_\_\_\_\_

The pharynx (pronounced **FAR-inks**) is the common passageway for food from the mouth and air from the nose. See Figure 2-14.

**pleur/o** pleura

**pleuritis** \_\_\_\_\_

2

**FIGURE 2-14 Pharynx (throat).** Notice that the **epiglottis** (a flap of cartilage) closes over the trachea during swallowing so that the bolus (mass) of food travels down the esophagus and not the trachea. (Modified from Chabner D-E: The Language of Medicine, ed 11, St. Louis, 2017, Elsevier.)

**Your Mother Was Right! Don't Talk While You're Eating!**

Talking while eating causes the epiglottis to open, so food can accidentally enter the trachea causing you to choke.

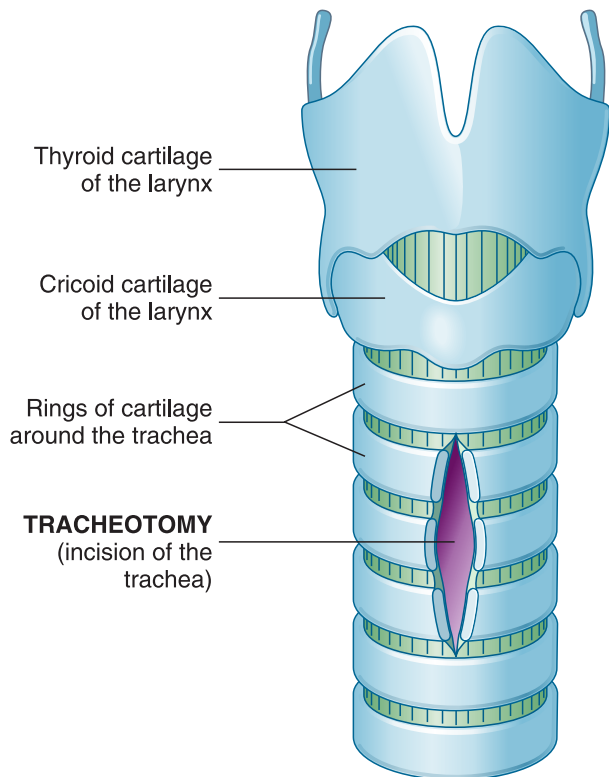

<b>poster/o</b>	back, behind	<u>posterior</u> _____ <i>See Table 2-1 for useful positional and directional terms, on page 60.</i>
<b>radi/o</b>	x-rays	<u>radiology</u> _____ <i>This medical specialty includes x-ray procedures, ultrasonography (images obtained using sound waves), and nuclear medicine (images obtained using radioactive substances).</i>
<b>sacr/o</b>	sacrum (five fused bones in the lower back)	<u>sacral</u>  _____
<b>spin/o</b>	spine (backbone)	<u>spinal</u> _____
<b>thorac/o</b>	chest	<u>thoracotomy</u> _____ <u>thoracic</u> _____
<b>trache/o</b>	trachea (windpipe)	<u>tracheotomy</u> _____ <i>See Figure 2-15.</i>
<b>vertebr/o</b>	vertebra (backbone)	<u>vertebral</u> _____

2

**Don't confuse sacr/o and sarc/o**

Notice the difference in spelling! **Sacr/o** always refers to the sacrum, a part of the back, while **sarc/o** means flesh and is used in **sarcoma**, a malignant tumor of connective or fleshy tissue of the body.

**FIGURE 2-15 Tracheotomy.** This procedure may be performed to open the trachea below a blockage from a foreign body or tumor. For an emergency procedure, any available instrument, even the barrel of a ballpoint pen, with the inner part removed, can be used to keep the airway open.

## IN PERSON: CT AND MRI

*The following first-person narrative provides a detailed look at two common diagnostic procedures—CT and MRI—from the perspective of the patient. It was written by Catherine Ward, a 77-year-old woman with head and neck cancer.*

### **CT—COMPUTED TOMOGRAPHY**

Before an upcoming surgical procedure, I was told that I would need to have a CT scan. The doctors wanted to see if the cancer on my scalp had spread into the bones in my skull. They explained that these images of my head would be in thin “slices,” taken as the CT camera rotated around me.

When I arrived in the room, I saw, to my claustrophobic relief, the CT machine was a large, circular hollow tube about 18 inches wide with a narrow table through the center. The technician explained he would add contrast halfway through the procedure through an intravenous (IV) line.

The table was rolled into the machine to a specific spot where a series of pictures were taken. There were several short periods when I was asked to stay as still as possible and hold my breath. The noise was minimal, just soft whirring and clicking. Halfway through the procedure, the contrast was administered into the IV line. Additional pictures were taken, and the test was completed with a minimum of discomfort, much to my grateful surprise.

### **MRI—MAGNETIC RESONANCE IMAGING**

Before yet another surgical procedure, my doctors requested an MRI. They explained that the MRI and CT images are similar, but that MRI shows more detail, especially of soft tissue.

The technician asked if I had any metal (such as a pacemaker or surgical screws) inside or on my body. The magnet used in the MRI machine is so strong that it could cause metal objects to shift, disrupting the imaging process or causing damage to tissue in my body.

The MRI machine is a 6-foot-long round tube, open on both ends. Because the body part to be examined was my head, a rubber shield was placed over and very close to my face to hold me in the correct position. I was then rolled inside to the middle of the tube. This was really uncomfortable for me because of my mild claustrophobia. I took deep breaths to relax myself.

I was still taken aback by just how loud it was inside the tube. Even with the earplugs that were provided, the sound of the machine was extremely loud, just like heavy-duty jackhammers. I used a “relax-substitution” method to calm myself, replacing the jarring MRI pounding with more pleasant sounds. I remembered a very loud time as my family and I made our way to Nantucket Island on a ferry for a brief vacation. Now the previously strident and threatening sound of the MRI was replaced in my mind by the welcoming sound of the ferry horn bellowing a happy welcome to the visitors’ smiling faces as they came onto the ferry with straw hats,

sunscreen, backpacks, and duffel bags. This relaxation method was extremely effective for me.

After taking a series of images, I was then rolled out of the machine for addition of the IV contrast, and the process was repeated.

I am still amazed that the doctors could get such detailed information on what was going on inside my body using these two tests.

## EXERCISES AND ANSWERS

*Complete these exercises and check your answers. An important part of your success in learning medical terminology is checking your answers carefully with the Answers to Exercises on [page 72](#). Be sure to visit the Evolve website, which has additional information, images, games, videos, and interactive activities.*

### **A** Match the following systems of the body with their functions.

circulatory  
digestive  
endocrine

musculoskeletal  
nervous  
reproductive

respiratory  
skin and sense organs  
urinary

1. Produces urine and sends it out of the body \_\_\_\_\_
2. Secretes hormones that are carried by blood to other organs \_\_\_\_\_
3. Supports the body and helps it move \_\_\_\_\_
4. Takes food into the body and breaks it down to be absorbed into the bloodstream  
\_\_\_\_\_
5. Transports blood containing nutrients, gases, and other substances through the  
body \_\_\_\_\_
6. Moves air into and out of the body \_\_\_\_\_
7. Produces the cells that unite to form a new baby \_\_\_\_\_
8. Receives messages from the environment and sends them to the brain  
\_\_\_\_\_
9. Carries electrical messages to and from the brain and spinal cord  
\_\_\_\_\_

**B** Select from the following body systems to match the organ or tissue that is found within the system.

cardiovascular  
female reproductive  
musculoskeletal  
skin and sense organs

digestive  
lymphatic  
nervous  
urinary

endocrine  
male reproductive  
respiratory

1. brain \_\_\_\_\_
2. cartilage \_\_\_\_\_
3. kidney \_\_\_\_\_
4. intestines \_\_\_\_\_
5. heart \_\_\_\_\_
6. bronchial tubes \_\_\_\_\_
7. uterus \_\_\_\_\_
8. retina \_\_\_\_\_
9. adrenal glands \_\_\_\_\_
10. testes \_\_\_\_\_

**C** Use the following terms to complete the chart below. Give the name of the cavity and an organ that is contained within the cavity.

abdominal  
brain  
cranial  
heart

lungs  
pelvic  
spinal  
spinal cord

stomach  
thoracic  
urinary bladder  
uterus

	Cavity	Organ
1. Space located within the bones of the hip	_____	_____
2. Space located within the skull	_____	_____
3. Space located within the chest	_____	_____
4. Space located within the abdomen	_____	_____
5. Space located within the backbones	_____	_____

**D Complete the following sentences using the terms listed below.**

abdomen (abdominal  
cavity)  
diaphragm  
disk (disc)

mediastinum  
pelvis  
peritoneum  
pleura

spinal column  
spinal cord  
vertebra

1. The bones of the hip are the \_\_\_\_\_
2. The muscle separating the chest and the abdomen is the \_\_\_\_\_
3. The membrane surrounding the organs in the abdomen is the \_\_\_\_\_
4. The membrane surrounding the lungs is the \_\_\_\_\_
5. The space between the lungs in the chest is the \_\_\_\_\_
6. The space that contains organs such as the stomach, liver, gallbladder, and intestines is the \_\_\_\_\_
7. The backbones are the \_\_\_\_\_
8. The nerves running down the back form the \_\_\_\_\_
9. A single backbone is a \_\_\_\_\_
10. A piece of cartilage in between two backbones is a \_\_\_\_\_

**E Name the five divisions of the spinal column from the neck to the tailbone.**

1. c \_\_\_\_\_
2. t \_\_\_\_\_
3. l \_\_\_\_\_
4. s \_\_\_\_\_
5. c \_\_\_\_\_

**F Match the following terms with their meanings below.**

anterior  
cartilage  
CT scan

frontal (coronal) plane  
MRI  
posterior

sagittal plane  
transverse (axial) plane

1. Pertaining to the back \_\_\_\_\_
2. Pertaining to the front \_\_\_\_\_
3. A plane that divides the body into an upper and a lower part \_\_\_\_\_
4. An imaging study that uses magnetic waves; all three planes of the body are viewed  
\_\_\_\_\_
5. A plane that divides the body into right and left parts \_\_\_\_\_
6. Flexible connective tissue found between bones at joints \_\_\_\_\_
7. A plane that divides the body into front and back parts \_\_\_\_\_
8. Series of cross-sectional x-ray images \_\_\_\_\_

**G Give meanings for the following terms.**

1. craniotomy \_\_\_\_\_
2. abdominal \_\_\_\_\_
3. pelvic \_\_\_\_\_
4. thoracic \_\_\_\_\_
5. mediastinal \_\_\_\_\_
6. epithelial \_\_\_\_\_
7. tracheotomy \_\_\_\_\_
8. peritoneal \_\_\_\_\_
9. hepatitis \_\_\_\_\_
10. cervical \_\_\_\_\_
11. lymphocyte \_\_\_\_\_
12. lateral \_\_\_\_\_
13. bronchoscopy \_\_\_\_\_

14. diaphragm \_\_\_\_\_
15. pleura \_\_\_\_\_
16. chondrosarcoma \_\_\_\_\_
17. radiology \_\_\_\_\_

**H** Match the following terms with their meanings below.

coccygeal  
epithelial  
esophageal  
laparoscopy

laparotomy  
laryngeal  
lumbar  
pharyngeal

pleuritis  
sacral  
thoracotomy  
vertebral

1. Pertaining to the loin (waist) region below the thoracic vertebrae \_\_\_\_\_
2. Pertaining to skin (lining or surface) cells \_\_\_\_\_
3. Incision of the abdomen \_\_\_\_\_
4. Pertaining to the tube from the throat to stomach \_\_\_\_\_
5. Pertaining to the voice box \_\_\_\_\_
6. Inflammation of the membrane surrounding the lungs \_\_\_\_\_
7. Pertaining to the throat \_\_\_\_\_
8. Pertaining to the sacrum \_\_\_\_\_
9. Incision of the chest \_\_\_\_\_
10. Pertaining to the tailbone \_\_\_\_\_
11. Visual examination of the abdomen \_\_\_\_\_
12. Pertaining to backbones \_\_\_\_\_

**I** Circle the boldface term that best completes the meaning of the sentences in the following medical vignettes.

1. After her car accident, Cathy had severe neck pain. An MRI study revealed a protruding (**diaphragm, disk, uterus**) between C6 and C7. The doctor asked her to wear a (**sacral, cervical, cranial**) collar for several weeks.
2. Mr. Sellar was a heavy smoker all his adult life. He began coughing and losing weight and became very lethargic (tired). His physician suspected a tumor of the (**musculoskeletal, urinary, respiratory**) system. A chest CT scan showed a (**lung, pharyngeal, spinal**) mass. Dr. Baker performed (**laparoscopy, craniotomy, bronchoscopy**) to biopsy the lesion.

- Grace had never seen a gynecologist. She had pain in her (**cranial, pelvic, thoracic**) cavity and increasing (**abdominal, vertebral, laryngeal**) girth (size). Dr. Hawk suspected a/an (**esophageal, ovarian, mediastinal**) tumor after palpating (examining by touch) a mass.
- Mr. Cruise was exposed to asbestos while working in the shipyards during World War II. Now many years later, his doctor encouraged him to stop smoking because of a recently discovered link between asbestos, smoking, and the occurrence of mesothelioma (malignant tumor of cells of the pleura or the membrane surrounding the lungs). A routine chest x-ray film had shown thickening of the (**esophagus, pleura, trachea**) on both sides of Mr. Cruise's (**abdominal, spinal, thoracic**) cavity.
- Kelly complained of headaches, together with nausea, disturbances of vision, and loss of coordination in her movements. Also, she had generalized weakness and stiffness on one side of her body. Dr. Brown suspected a tumor of the central (**circulatory, digestive, nervous**) system. Treatment involved a (**thoracotomy, craniotomy, laryngectomy**) to remove the lesion (mass) in her brain.
- Mr. Smith experienced increasing weakness and loss of movement in his right arm and right leg. He saw his family doctor, who immediately referred him to a (**neurologist, cardiologist, rheumatologist**). This specialist examined him and sent him to (**pathology, hematology, radiology**) for x-ray imaging. (Results are shown in [Figure 2-16](#).) This image is a/an (**MRI study, CT scan, AP film**). The imaging clearly showed a large white region in the brain, indicating an area of dead tissue. Mr. Smith's doctor informed him that he had had a stroke, which is also known as a (**pituitary gland tumor, myocardial infarction, CVA or cerebrovascular accident**).

**FIGURE 2-16** Cross-sectional x-ray image of Mr. Smith's head.

## ANSWERS TO EXERCISES

**A**

- |                    |                |                          |
|--------------------|----------------|--------------------------|
| 1. urinary         | 4. digestive   | 7. reproductive          |
| 2. endocrine       | 5. circulatory | 8. skin and sense organs |
| 3. musculoskeletal | 6. respiratory | 9. nervous               |

**B**

- |                    |                          |                       |

| 2. musculoskeletal | 6. respiratory           | 10. male reproductive |
| 3. urinary         | 7. female reproductive   |                       |
| 4. digestive       | 8. skin and sense organs |                       |

**C**

- |                                     |                            |                         |
|-------------------------------------|----------------------------|-------------------------|
| 1. pelvic (urinary bladder, uterus) | 2. cranial (brain)         | 4. abdominal (stomach)  |
|                                     | 3. thoracic (lungs, heart) | 5. spinal (spinal cord) |

**D**

- |               |                               |                 |
|---------------|-------------------------------|-----------------|
| 1. pelvis     | 5. mediastinum                | 8. spinal cord  |
| 2. diaphragm  | 6. abdomen (abdominal cavity) | 9. vertebra     |
| 3. peritoneum | 7. spinal column              | 10. disk (disc) |
| 4. pleura     |                               |                 |

**E**

- |             |             |           |           |              |
|-------------|-------------|-----------|-----------|--------------|
| 1. cervical | 2. thoracic | 3. lumbar | 4. sacral | 5. coccygeal |
|-------------|-------------|-----------|-----------|--------------|

**F**

- |                             |                   |                            |
|-----------------------------|-------------------|----------------------------|
| 1. posterior                | 4. MRI            | 7. frontal (coronal) plane |
| 2. anterior                 | 5. sagittal plane | 8. CT scan                 |
| 3. transverse (axial) plane | 6. cartilage      |                            |

**G**

1. incision of the skull
2. pertaining to the abdomen
3. pertaining to the pelvis (bones of the hip)
4. pertaining to the chest
5. pertaining to the mediastinum (the space between the lungs)
6. pertaining to skin (lining or surface) cells
7. incision of the trachea (windpipe)
8. pertaining to the peritoneum (the membrane surrounding the organs in the abdomen)
9. inflammation of the liver
10. pertaining to the neck of the body, or neck (cervix) of the uterus
11. lymph cell (a type of white blood cell)
12. pertaining to the side
13. visual examination of bronchial tubes using an endoscope
14. muscle separating the abdomen from the chest
15. membrane surrounding the lungs
16. malignant tumor (sarcoma) of cartilage
17. study of x-rays

**H**

- |               |               |                 |
|---------------|---------------|-----------------|
| 1. lumbar     | 5. laryngeal  | 9. thoracotomy  |
| 2. epithelial | 6. pleuritis  | 10. coccygeal   |
| 3. laparotomy | 7. pharyngeal | 11. laparoscopy |
| 4. esophageal | 8. sacral     | 12. vertebral   |

**I**

- |                                    |   |
|------------------------------------|---|
| 1. disk, cervical                  | 5. nervous, craniotomy  |
| 2. respiratory, lung, bronchoscopy | 6. neurologist, radiology, CT scan, CVA or cerebrovascular accident |
| 3. pelvic, abdominal, ovarian      |   |
| 4. pleura, thoracic                |   |

## PRONUNCIATION OF TERMS

The terms that you have learned in this chapter are presented here with their pronunciations. The capitalized letters in **BOLDFACE** represent the accented syllable. Pronounce each word out loud; then write the meaning in the space provided. Meanings of terms are found in the **Mini-Dictionary**, beginning on [page 349](#), and on the audio section of the Evolve website (<http://evolve.elsevier.com/Chabner/medtermshort>).

Term	Pronunciation	Meaning
abdomen	<b>AB</b> -do-men _____	
abdominal cavity	ab- <b>DOM</b> -in-al <b>KAV</b> -ih-te _____	
anterior	an- <b>TE</b> -re-or _____	
bronchial tubes	<b>BRON</b> -ke-al toobz _____	
bronchoscopy	bron- <b>KOS</b> -ko-pe _____	
cartilage	<b>KAR</b> -tih-lij _____	
cervical	<b>SER</b> -vih-kal _____	
chondroma	kon- <b>DRO</b> -mah _____	
chondrosarcoma	kon-dro-sar- <b>KO</b> -mah _____	
circulatory system	<b>SER</b> -ku-lah-tor-e <b>SIS</b> -tem _____	
coccygeal	kok-sih- <b>JE</b> -al _____	
coccyx	<b>KOK</b> -siks _____	
cranial cavity	<b>KRA</b> -ne-al <b>KAV</b> -ih-te _____	
craniotomy	kra-ne- <b>OT</b> -o-me _____	
diaphragm	<b>DI</b> -ah-fram _____	
digestive system	di- <b>JES</b> -tiv <b>SIS</b> -tem _____	
disc (disk)	disk _____	
endocrine system	<b>EN</b> -do-krin <b>SIS</b> -tem _____	
epithelial	ep-ih- <b>THE</b> -le-al _____	

esophageal	eh-sof-ah- <b>JE</b> -al _____
esophagus	eh- <b>SOF</b> -ah-gus _____
female reproductive system	<b>FE</b> -male re-pro- <b>DUK</b> -tiv <b>SIS</b> -tem _____
frontal plane	<b>FRUN</b> -tal plane _____
hepatitis	hep-ah- <b>TI</b> -tis _____
laparoscopy	lap-ah- <b>ROS</b> -ko-pe _____
laparotomy	lap-ah- <b>ROT</b> -o-me _____
laryngeal	lah- <b>RIN</b> -je-al <i>or</i> lah-rin- <b>JE</b> -al _____
laryngectomy	lah-rin- <b>JEK</b> -to-me _____
larynx	<b>LAR</b> -inks _____
lateral	<b>LAT</b> -er-al _____
lumbar	<b>LUM</b> -bar _____
lymphocyte	<b>LIMF</b> -o-site _____
male reproductive system	male re-pro- <b>DUK</b> -tiv <b>SIS</b> -tem _____
mediastinal	me-de-ah- <b>STI</b> -nal _____
mediastinum	me-de-ah- <b>STI</b> -num _____
musculoskeletal system	mus-ku-lo- <b>SKEL</b> -eh-tal <b>SIS</b> -tem _____
nervous system	<b>NER</b> -vus <b>SIS</b> -tem _____
ovary	<b>O</b> -vah-re _____
pelvic cavity	<b>PEL</b> -vik <b>KAV</b> -ih-te _____
pelvis	<b>PEL</b> -vis _____
peritoneal	per-ih-to- <b>NE</b> -al _____
peritoneum	per-ih-to- <b>NE</b> -um _____
pharyngeal	fah- <b>RIN</b> -je-al <i>or</i> fah-rin- <b>JE</b> -al _____

pharynx	<b>FAR</b> -inks _____
pituitary gland	pih- <b>TOO</b> -ih-teh-re gland _____
pleura	<b>PLOO</b> -rah _____
pleuritis	ploo- <b>RI</b> -tis _____
posterior	pos- <b>TER</b> -e-or _____
radiology	ra-de- <b>OL</b> -o-ge _____
respiratory system	<b>RES</b> -pir-ah-tor-e <b>SIS</b> -tem _____
sacral	<b>SA</b> -kral _____
sacrum	<b>SA</b> -krum _____
sagittal plane	<b>SAJ</b> -ih-tal plane _____
spinal cavity	<b>SPI</b> -nal <b>KAV</b> -ih-te _____
spinal column	<b>SPI</b> -nal <b>KOL</b> -um _____
spinal cord	<b>SPI</b> -nal kord _____
thoracic cavity	tho- <b>RAS</b> -ik <b>KAV</b> -ih-te _____
thoracotomy	tho-rah- <b>KOT</b> -o-me _____
trachea	<b>TRAY</b> -ke-ah _____
tracheotomy	tray-ke- <b>OT</b> -o-me _____
transverse plane	trans- <b>VERS</b> plane _____
ureter	<b>YOOR</b> -eh-ter <i>or</i> u- <b>RE</b> -ter _____
urethra	u- <b>RE</b> -thrah _____
urinary system	<b>YOOR</b> -in-air-e <b>SIS</b> -tem _____
uterus	<b>U</b> -ter-us _____
vertebra	<b>VER</b> -teh-brah _____
vertebrae	<b>VER</b> -teh-bray _____
vertebral	<b>VER</b> -teh-bral _____

## PRACTICAL APPLICATIONS

### PROCEDURES

Select one of the procedures listed below to identify the descriptions in the following paragraphs. Answers are found on [page 77](#).

bronchoscopy

laparotomy

thoracotomy

craniotomy

laryngectomy

tracheotomy

laparoscopy

1. A skin incision is made, and muscle is stripped away from the skull. Four or five burr (or bur) holes are drilled into the skull. The bone between the holes is cut using a craniotome (bone saw). The bone flap is turned down or completely removed. After the bone flap is secured, the membrane surrounding the brain is incised and the brain is exposed. This procedure is a \_\_\_\_\_.
2. A major surgical incision is made into the chest for diagnostic or therapeutic purposes. One type of incision is a medial sternotomy (the sternum is the breastbone). A straight incision is made from the upper part of the sternum (suprasternal notch) to the lower end of the sternum (xiphoid process). The sternum must be cut with an electric or air-driven saw. The procedure is done to perform a biopsy or to locate sources of bleeding or injury. It often is performed to remove all or a portion of a lung. This procedure is a \_\_\_\_\_.
3. A needle is inserted below the umbilicus (navel) to inject carbon dioxide (a gas) into the abdomen. The gas distends (expands) the abdomen, permitting better visualization of the organs. A trocar (sharp-pointed instrument used to puncture the wall of a body cavity) within a cannula (tube) is inserted into an incision under the umbilicus. After the cannula is in place in the abdominal cavity, the trocar is removed and an endoscope is inserted through the cannula. The surgeon can then visualize the abdominopelvic cavity and reproductive organs. This procedure is a \_\_\_\_\_.
4. A flexible, fiberoptic endoscope is inserted through the mouth and down the throat and trachea to assess the tracheobronchial tree for tumors and obstructions, to obtain biopsy specimens, and to remove secretions and foreign bodies. This procedure is a \_\_\_\_\_.

## WHAT'S YOUR DIAGNOSIS?

### Case Study

A 67-year-old man with a 2-pack-a-day h/o (history of) smoking and hypertension (high blood pressure) presents to the ED (emergency department) complaining of hemoptysis (coughing up blood), fatigue, back pain on his right side, polyuria (frequent need to urinate), and headaches. The elevated BP (blood pressure), hemoptysis, and headaches require observation in the ED. The patient is admitted, and diabetes is ruled out as a cause of polyuria. A chest x-ray for hemoptysis reveals a RLL (right lower lobe) mass. Needle biopsy confirms malignancy. The patient agrees to have a lobectomy performed. He is counseled on his tobacco use during recovery, and he agrees to begin therapy for tobacco cessation.

Using the information presented in this case study, what's your diagnosis?

- A. Lung cancer—lower lobe
- B. Hemoptysis
- C. Polyuria
- D. Headache
- E. Hypertension

## ANSWERS TO PRACTICAL APPLICATIONS

### PROCEDURES

1. craniotomy
2. thoracotomy
3. laparoscopy
4. bronchoscopy

### WHAT'S YOUR DIAGNOSIS?

Answer: A. Lung cancer—lower lobe

## PICTURE SHOW

Answer the questions that follow each image. Answers are found on page 80.

**Abdominopelvic regions.** (Modified from Chabner D-E: *The Language of Medicine*, ed 11, St. Louis, 2017, Elsevier.)

- Which abdominopelvic regions are the middle lateral regions?
  - epigastric
  - lumbar (right and left)
  - hypochondriac (right and left)
  - inguinal (right and left)
- Which abdominopelvic region lies above the stomach?
  - epigastric
  - inguinal (right and left)
  - umbilical
  - hypogastric

3. Which abdominopelvic regions lie under the cartilage of the ribs?
  - a. hypogastric
  - b. hypochondriac (right and left)
  - c. umbilical
  - d. inguinal (right and left)
  
4. Which lateral abdominopelvic regions are in the area of the groin (depression between the thigh and the trunk of the body)?
  - a. umbilical
  - b. hypochondriac (right and left)
  - c. lumbar (right and left)
  - d. inguinal (right and left)

B

**Abdominopelvic quadrants.** (Modified from Chabner D-E: *The Language of Medicine*, ed 11, St. Louis, 2017, Elsevier.)

1. A large organ in the RUQ is the:
  - a. stomach
  - b. lung
  - c. heart
  - d. liver
  
2. The spleen is located in which quadrant?
  - a. LUQ
  - b. RUQ
  - c. RLQ
  - d. LLQ

C

A

B

(B, From Mason RJ, et al: Clinical Respiratory Medicine ed 4, Philadelphia, 2008, Saunders.)

- In the procedure shown, an endoscope (pictured in B) is inserted into the mouth to visualize tubes leading to the lungs. This procedure is:
  - laryngoscopy
  - laparoscopy
  - mediastinoscopy
  - esophagoscopy
  - bronchoscopy
- The instrument is a/an:
  - mediastinoscope
  - laparoscope
  - bronchoscope
  - esophagoscope
  - laryngoscope

## ANSWERS TO PICTURE SHOW

**A** 1. b                      2. a                      3. b                      4. d

**B** 1. d                      2. a

- C**
- e. This procedure is used for removing material (sputum) from the bronchial tubes, obtaining a biopsy specimen, or removing foreign bodies.
  - c. This flexible bronchoscope permits passage of various instruments to obtain specimens from airways and lungs.

## REVIEW

Write the meanings of the following combining forms and suffixes in the spaces provided. Check your answers with the Answers to Review on [page 82](#). Meanings for word parts also are listed in the **Glossary of Word Parts** beginning on [page 385](#).  
**Remember: The key to success is wRite, Repeat, Review!**

### COMBINING FORMS

Combining Form	Meaning	Combining Form	Meaning
1. abdomin/o	_____	15. lymph/o	_____
2. anter/o	_____	16. mediastin/o	_____
3. bronch/o	_____	17. pelv/o	_____
4. cervic/o	_____	18. peritone/o	_____
5. chondr/o	_____	19. pharyng/o	_____
6. coccyg/o	_____	20. pleur/o	_____
7. crani/o	_____	21. poster/o	_____
8. epitheli/o	_____	22. radi/o	_____
9. esophag/o	_____	23. sacr/o	_____
10. hepat/o	_____	24. spin/o	_____
11. lapar/o	_____	25. thorac/o	_____
12. laryng/o	_____	26. trache/o	_____
13. later/o	_____	27. vertebr/o	_____
14. lumb/o	_____		

## SUFFIXES

Suffix	Meaning
1. -ac	_____
2. -al	_____
3. -ar	_____
4. -cyte	_____
5. -eal	_____
6. -ectomy	_____
7. -ic	_____
8. -itis	_____
9. -logy	_____
10. -oma	_____
11. -scopy	_____
12. -tomy	_____

2

## TERMINOLOGY CHECKUP

*Before you leave this chapter, here are important concepts that you should thoroughly understand. In your own words, write the answers on the lines provided. Confirm your answers on the next page. Check the box next to each item when you know you've "got" it!*

1. Give the locations for the following double membranes: **pleura**, **peritoneum**, and **pericardium**.
- 
- 
- 
2. What is the difference between the following parts of the body: **pharynx**, **larynx**, **trachea**, and **esophagus**?
- 
- 
- 
3. Explain the difference between three planes of the body: **frontal (coronal) plane**, **sagittal (lateral) plane**, and **transverse (axial) plane**.
- 
- 
- 
4. Where is the **mediastinum**? Name organs that are located in this space.
- 
- 
- 
5. What is the difference between the **spinal column** and the **spinal cord**? Name the sections of the spinal column and the spinal cord.
- 
- 
-

## ANSWERS TO TERMINOLOGY CHECKUP

1. The **pleura** is a double membrane surrounding the lungs.  
The **peritoneum** is a double membrane surrounding the abdominal organs.  
The **pericardium** is a double membrane surrounding the heart. In a later chapter, you will learn about the **meninges**, three membranes surrounding the brain and spinal cord.
2. The **pharynx** is the **throat** (common passageway for air and food).  
The **larynx** is the **voice box** (containing vocal cords and located in the upper portion of the trachea).  
The **trachea** is the **windpipe** (tube that carries air into the bronchial tubes and lungs).  
The **esophagus** is the **food tube** (behind the trachea and carrying food to the stomach).
3. The **frontal (coronal) plane** divides the body into front and back (anterior/posterior) portions.  
The **sagittal (lateral) plane** divides the body into right and left sides.  
The **transverse (axial) plane** divides the body into upper and lower portions (cross sections). Visualizing organs in all three planes is possible with CT and MRI.
4. The **mediastinum** is the central region in the chest. It is the **space between the lungs**. Organs in the mediastinum are the **heart, large blood vessels** (aorta and venae cavae), **trachea, bronchial tubes, and lymph nodes**.
5. The **spinal cord** is a **bundle of nerves** extending from the base of the brain down the back of the body. The **spinal column** is a **series of bones** surrounding the spinal cord. Sections of the spinal cord and the spinal column are **cervical, thoracic, lumbar, sacral, and coccygeal**.

# Suffixes

Review .....	124
Terminology CheckUp .....	127

## CHAPTER OBJECTIVES

- To identify and define useful diagnostic and procedural suffixes
- To analyze, spell, and pronounce medical terms that contain diagnostic and procedural suffixes
- To apply medical terms in real-life situations

## INTRODUCTION

This chapter reviews the suffixes that you have learned in the first two chapters and also introduces new suffixes and medical terms. The combining forms used in the chapter are listed below. Refer to this list as you write the meanings of the terms in the Suffixes and Terminology section that follows (beginning on [page 87](#)). Be faithful about completing all of the Exercises ([page 107](#)), and remember to check your answers on [pages 113](#) and [114](#)! These exercises will help you spell terms correctly and understand their meanings. Test yourself by completing the Pronunciation of Terms on [pages 115](#) to [117](#) and Review ([pages 124](#) and [125](#)).

Remember the 3 “Rs”—wRite, Review, Repeat—and you will succeed!

## COMBINING FORMS

Combining Form	Meaning
<b>aden/o</b>	gland
<b>amni/o</b>	amnion (sac of fluid surrounding the embryo)
<b>angi/o</b>	vessel (usually a blood vessel)
<b>arteri/o</b>	artery
<b>arthr/o</b>	joint
<b>ather/o</b>	plaque (a yellow, fatty material)
<b>axill/o</b>	armpit (underarm)
<b>bronch/o</b>	bronchial tube
<b>bronchi/o</b>	bronchial tube
<b>carcin/o</b>	cancerous
<b>cardi/o</b>	heart
<b>chem/o</b>	drug; also chemical
<b>cholecyst/o</b>	gallbladder
<b>chron/o</b>	time
<b>col/o</b>	colon (large intestine or bowel)
<b>crani/o</b>	skull
<b>cry/o</b>	cold
<b>cyst/o</b>	urinary bladder; also a sac of fluid or a cyst
<b>electr/o</b>	electricity
<b>encephal/o</b>	brain
<b>erythr/o</b>	red
<b>esophag/o</b>	esophagus (tube leading from the throat to the stomach)
<b>hem/o</b>	blood
<b>hemat/o</b>	blood
<b>hepat/o</b>	liver
<b>hyster/o</b>	uterus
<b>inguin/o</b>	groin (area in which the thigh meets the trunk of the body)
<b>isch/o</b>	to hold back
<b>lapar/o</b>	abdomen (abdominal wall)

<b>laryng/o</b>	voice box (larynx)
<b>leuk/o</b>	white
<b>mamm/o</b>	breast (use with -ARY, -GRAPHY, -GRAM, and -PLASTY)
<b>mast/o</b>	breast (use with -ECTOMY and -ITIS)
<b>men/o</b>	menses (menstruation); month
<b>mening/o</b>	meninges (membranes around the brain and spinal cord)
<b>my/o</b>	muscle
<b>myel/o</b>	spinal cord (nervous tissue connected to the brain, located within the spinal column.) MYEL/O can also mean bone marrow (soft, inner part of bones, where blood cells are made)
<b>necr/o</b>	death (of cells)
<b>nephr/o</b>	kidney (use with all suffixes, except -AL and -GRAM; use REN/O with -AL and -GRAM)
<b>neur/o</b>	nerve
<b>oophor/o</b>	ovary
<b>oste/o</b>	bone
<b>ot/o</b>	ear
<b>pelv/o</b>	hip area
<b>peritone/o</b>	peritoneum (membrane surrounding organs in the abdomen)
<b>phleb/o</b>	vein
<b>pneumon/o</b>	lung
<b>pulmon/o</b>	lung
<b>radi/o</b>	x-rays
<b>ren/o</b>	kidney (use with -AL and -GRAM)
<b>rhin/o</b>	nose
<b>salping/o</b>	fallopian (uterine) tube
<b>sarc/o</b>	flesh
<b>septic/o</b>	pertaining to infection
<b>thorac/o</b>	chest
<b>tonsill/o</b>	tonsil
<b>trache/o</b>	windpipe; trachea
<b>ur/o</b>	urine or urea (a waste material); urinary tract
<b>vascul/o</b>	blood vessel

## SUFFIXES AND TERMINOLOGY

Suffixes are divided into two groups: those that describe **diagnoses** and those that describe **procedures**.

### DIAGNOSTIC SUFFIXES

Diagnostic suffixes describe disease conditions or their symptoms. Use the list of combining forms in the previous section to write the meaning of each term. You will find it helpful to check the meanings of the terms with the *Mini-Dictionary*, beginning on [page 349](#).

Noun Suffix	Meaning	Terminology	Meaning
<b>-algia</b>	condition of pain, pain	arthralgia _____	
		otalgia _____	
		myalgia _____	
		neuralgia _____	
<b>-emia</b>	blood condition	leukemia _____	<i>Increase in numbers of leukocytes; cells are malignant (cancerous).</i>
		septicemia  _____	<i>Blood infections result when pathogens enter the blood from a wound.</i>
		ischemia _____	<i>Figure 3-1 illustrates ischemia of heart muscle caused by blockage of a coronary (heart) artery.</i>

3

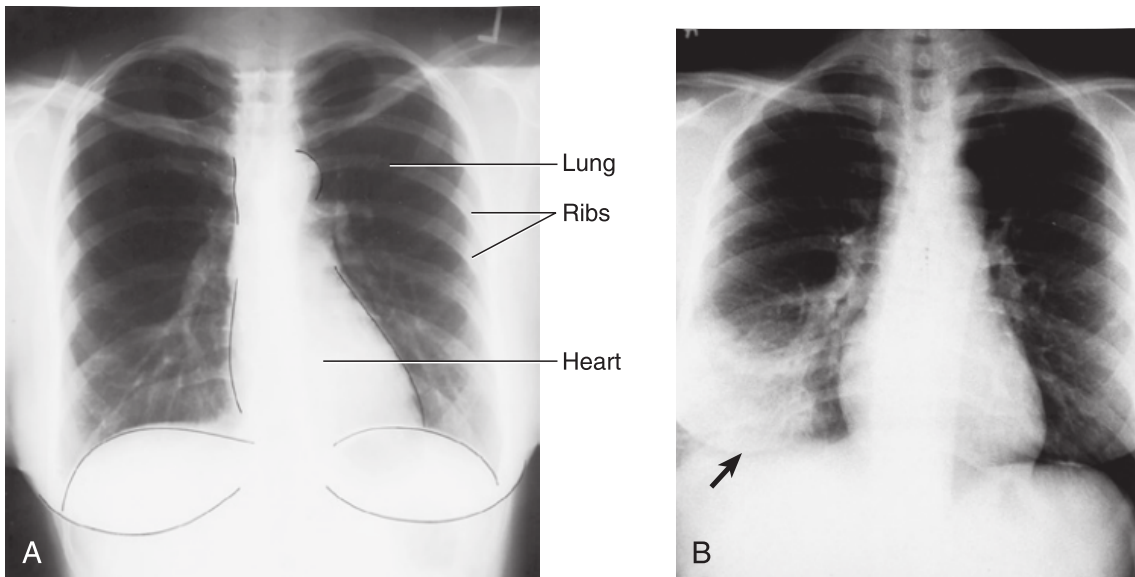

### Septicemia and bacteremia

**Bacteremia** is bacterial invasion of the blood without or without symptoms. **Septicemia** (sepsis), however, is a more serious bacteremia that moves rapidly and may be life-threatening.

**FIGURE 3-1 Ischemia of heart muscle.** Blood is held back from an area of the heart muscle by an occlusion (blockage) of a coronary (heart) artery. The muscle then loses its supply of oxygen and nutrition and, if the condition persists, dies. **The death of the affected part of the heart muscle is a myocardial infarction (heart attack).** (From Chabner D-E: *The Language of Medicine*, ed 11, St. Louis, 2017, Elsevier.)

**FIGURE 3-2** **A**, Chest x-ray film showing **normal lungs**. **B**, Chest x-ray showing **pneumonia** in the right lower lobe of the lung (see arrow). (**A**, From Mason RJ, et al: Murray and Nadel's Textbook of Respiratory Medicine, ed 4, Philadelphia, 2005, Saunders. **B**, From Mettler FA: Essentials of Radiology, ed 3, Philadelphia, 2014, Saunders.)

uremia \_\_\_\_\_

*Uremia occurs when the kidneys fail to function and urea (a waste material) accumulates in the blood.*

**-ia**                      condition                      pneumonia \_\_\_\_\_

*The lung is inflamed, causing fluid and material to collect in the air sacs of the lung. See [Figure 3-2](#).*

**-itis**                      inflammation                      bronchitis \_\_\_\_\_

*Bronchial tubes are inflamed, with hypersecretion of mucus.*

esophagitis \_\_\_\_\_

laryngitis \_\_\_\_\_

meningitis \_\_\_\_\_

*The meninges are membranes that surround and protect the brain and spinal cord. See [Figure 3-3](#).*

cystitis \_\_\_\_\_

phlebitis \_\_\_\_\_

colitis \_\_\_\_\_

*[Table 3-1](#) lists other common inflammatory conditions with their meanings.*

**FIGURE 3-3** **Meninges** (frontal view) are the membranes surrounding the brain and spinal cord.

3

TABLE 3-1 INFLAMMATIONS	
appendicitis	Inflammation of the appendix (hangs from the colon in the lower right abdomen)
bursitis	Inflammation of a small sac of fluid (bursa) near a joint
cellulitis	Inflammation of soft tissue under the skin
dermatitis	Inflammation of the skin
endocarditis	Inflammation of the inner lining of the heart (endocardium)
epiglottitis	Inflammation of the epiglottis (cartilage at the upper part of the windpipe)
gastritis	Inflammation of the stomach
hepatitis	Inflammation of the liver
myositis	Inflammation of muscle (MYOS/O means muscle)
nephritis	Inflammation of the kidney
osteomyelitis	Inflammation of bone and bone marrow
otitis	Inflammation of the ear
peritonitis	Inflammation of the peritoneum
pharyngitis	Inflammation of the throat
thrombophlebitis	Inflammation of a vein with formation of clots

<b>-megaly</b>	enlargement	cardiomegaly _____ hepatomegaly _____
<b>-oma</b>	tumor, mass	adenoma _____ <i>This is a benign (noncancerous) tumor.</i> adenocarcinoma _____ <i>Carcinomas are malignant (cancerous) tumors of epithelial (skin or lining) tissue in the body. Glands and the linings of internal organs are composed of epithelial tissue. See <a href="#">Figure 3-4B</a>.</i> myoma _____ <i>This is a benign tumor. Myomas commonly occur in the uterus and are known as <b>fibroids</b>. See <a href="#">Figure 3-5</a>.</i> myosarcoma _____ <i>Sarcomas are malignant tumors of connective (flesh) tissue. Muscle, bone, cartilage, fibrous tissue, and fat are examples of connective tissues. See <a href="#">Table 3-2</a>.</i> myeloma _____ <i>MYEL/O means bone marrow in this term. Also called <b>multiple myeloma</b>, this is a malignant tumor of cells in the bone marrow. See <a href="#">Table 3-3</a> for names of other malignant tumors that do not contain the combining forms CARCIN/O and SARC/O.</i>

**FIGURE 3-4** A, Normal esophagus. B, Esophageal adenocarcinoma. (Courtesy Dr. Erik-Jan Wamsteker: Gastroenterology. In Rakel RE, editor: Textbook of Family Medicine, ed 7, Philadelphia, 2007, Saunders.)

**FIGURE 3-5 A, Location of uterine fibroids (leiomyomas).** Pedunculated growths protrude on stalks. A subserosal mass lies under the serosal (outermost) layer of the uterus. A submucosal leiomyoma grows under the mucosal (innermost) layer. Intramural (mural means wall) masses arise within the muscular uterine wall. **B, Multiple myomas viewed laparoscopically.** (A, From *Damjanov I: Pathology for the Health-Related Professions, ed 5, Philadelphia, 2017, Saunders.* B, From *Hunt RB: Text and Atlas of Female Infertility Surgery, ed 3, St. Louis, 1999, Mosby.*)

TABLE 3-2		SARCOMAS
chondrosarcoma		Cancer of cartilage tissue (CHONDR/O means cartilage)
fibrosarcoma		Cancer of fibrous tissue (FIBR/O means fibrous tissue)
leiomyosarcoma		Cancer of visceral (attached to internal organs) muscle (LEIOMY/O means visceral or “smooth” muscle)
liposarcoma		Cancer of fatty tissue (LIP/O means fat)
osteogenic sarcoma		Cancer of bone (OSTE/O means bone)
rhabdomyosarcoma		Cancer of skeletal (attached to bones) muscle (RHABDOMY/O means skeletal muscle)

TABLE 3-3		MALIGNANT TUMORS WHOSE NAMES DO NOT CONTAIN THE COMBINING FORMS <i>CARCIN/O</i> AND <i>SARC/O</i>
hepatoma		Malignant tumor of the liver (commonly called hepatocellular carcinoma)
lymphoma		Malignant tumor of lymph nodes (previously called lymphosarcoma)
melanoma		Malignant tumor of pigmented (MELAN/O means black) cells in the skin
mesothelioma		Malignant tumor of pleural cells (membrane surrounding the lungs)
multiple myeloma		Malignant tumor of bone marrow cells
thymoma		Malignant tumor of the thymus gland (located in the mediastinum)

<b>-osis</b>	condition, abnormal condition	nephrosis _____
		necrosis _____ <i>Ischemia may lead to necrosis. <b>Gangrene</b> is type of necrosis.</i>
		erythrocytosis _____ <i>When -OSIS is used with blood cell words, it means a slight increase in number of cells.</i>
		leukocytosis  _____
<b>-pathy</b>	disease condition	encephalopathy _____ <i>Pronunciation is en-sef-ah-<b>LOP</b>-ah-the.</i>
		cardiomyopathy  _____ <i>Pronunciation is kar-de-o-mi-<b>OP</b>-ah-the.</i>
		nephropathy _____ <i>Pronunciation is neh-<b>FROP</b>-ah-the. <a href="#">Table 3-4</a> lists other disease conditions.</i>

### Leukocytosis versus leukemia

**Leukocytosis**—slight increase in normal white blood cells (WBCs)—is the body’s response to bacterial infection. **Leukemia** is a malignant condition marked by dramatic increase in cancerous WBCs.

### Cardiomyopathy and myocardial infarction (MI)

**Cardiomyopathy** is chronic (ongoing) disease of heart muscle with inflammation and weakness. A **myocardial infarction (MI)** is an acute (sudden) condition involving an area of heart muscle that has died as a result of ischemia. An MI is a heart attack.

**TABLE 3-4** DISEASE CONDITIONS (-PATHIES)

TABLE 3-4 DISEASE CONDITIONS (-PATHIES)	
adenopathy	Disease condition of lymph nodes (“glands”); lymphadenopathy
adrenopathy	Disease condition of the adrenal glands
hepatopathy	Disease condition of the liver
lymphadenopathy	Disease condition of the lymph nodes (previously called glands)
myopathy	Disease condition of muscles
neuropathy	Disease condition of nerves
osteopathy	Disease condition of bones
retinopathy	Disease condition of the retina of the eye

<b>-rrhea</b>	flow, discharge	rhinorr <u>hea</u> _____ menorr <u>hea</u> _____ <i>Normal menstrual flow.</i>
<b>-rrhage or -rrhagia</b>	excessive discharge of blood	hemorrh <u>age</u> _____ menorrh <u>agia</u>  _____ <i>Excessive bleeding during menstruation.</i>
<b>-sclerosis</b>	hardening	arterioscler <u>osis</u> _____ <i><b>Atherosclerosis</b> is the most common type of arteriosclerosis. A fatty plaque (atheroma) collects on the lining of arteries. See <a href="#">Figure 3-6</a>.</i>
<b>-uria</b>	condition of urine	hematur <u>ia</u>  _____ <i>Bleeding into the urinary tract can cause this sign of kidney disease or of disorders of the urinary and genital tracts.</i>

All of the following **adjective suffixes** mean *pertaining to* and describe a part of the body, process, or condition. Do not worry about which suffix (-al, -eal, -ar, -ary, or -ic) to use with a particular organ or root. Just identify the suffix as meaning “pertaining to” in each term.

<b>-al or -eal</b>	pertaining to	periton <u>eal</u> _____ inguin <u>al</u> _____ ren <u>al</u> _____ esophag <u>eal</u> _____ myocard <u>ial</u> _____ <i>Don't forget that a heart attack is a <b>myocardial infarction (MI)</b>. An <b>infarction</b> is an area of dead tissue caused by <b>ischemia</b> (a condition in which blood supply is held back from a part of the body).</i>
--------------------	---------------	---

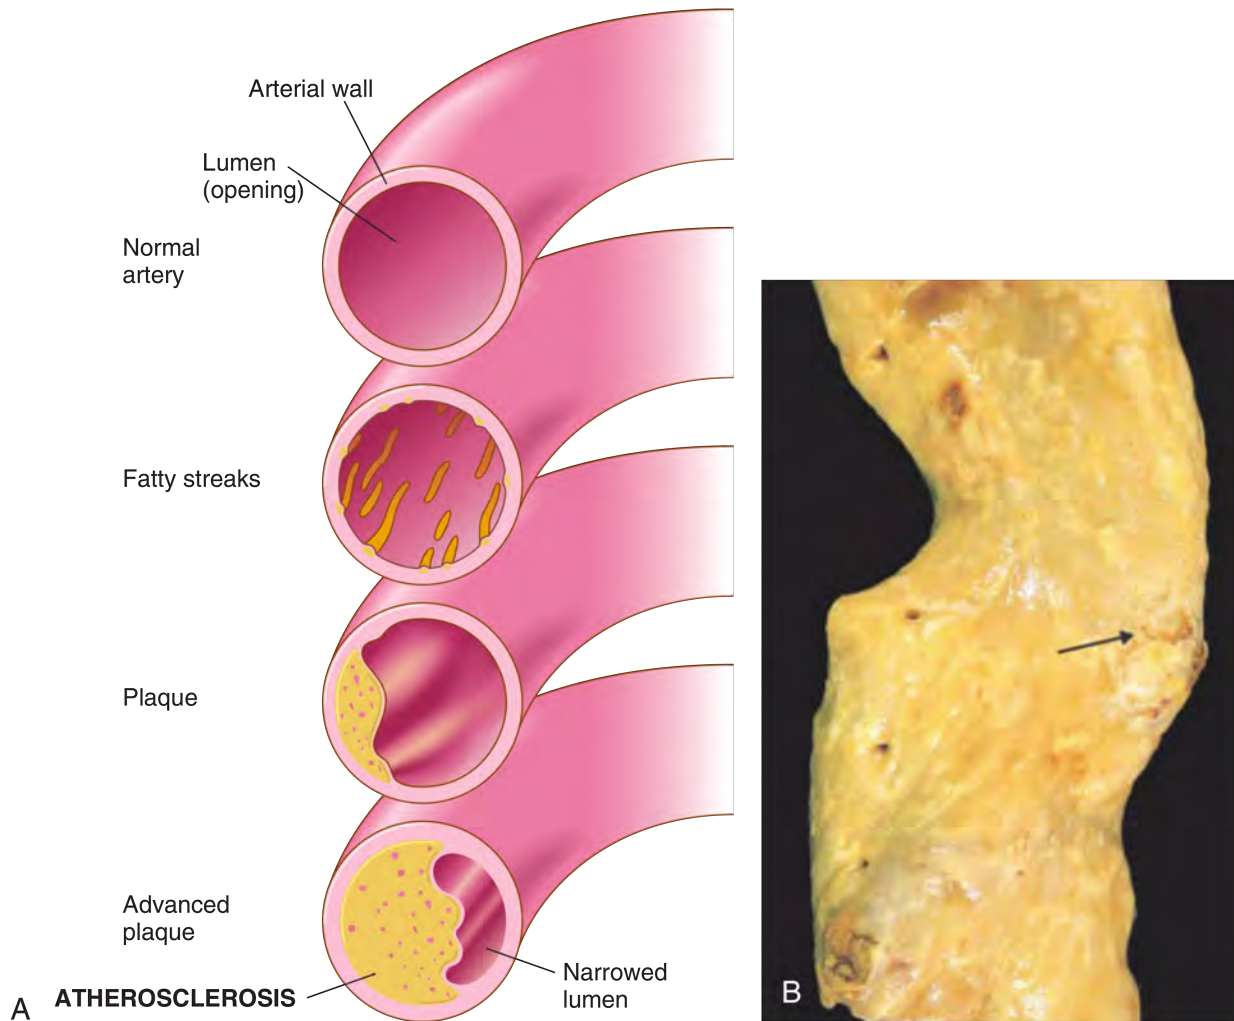

**Menorrhea and menorrhagia**

**Menorrhea** is the normal discharge of blood and tissue from the lining of the uterus. **Menorrhagia** is abnormally heavy or long menstrual periods. Chronic menorrhagia can result in anemia. Menorrhagia is a common complication of uterine myomas (fibroids).

**Hematuria and uremia**

**Hematuria** is blood in the urine, whereas **uremia** is high levels of urea in the blood.

**FIGURE 3-6 Atherosclerosis** (a type of **arteriosclerosis**). **A**, A fatty material (cholesterol) collects in an artery, narrowing it and eventually blocking the flow of blood. **B**, Photo of resected aorta with mild atherosclerotic disease.

**-ar**                    pertaining to      vascular \_\_\_\_\_

A *cerebrovascular accident (CVA)* is a stroke.

**-ary**                    pertaining to      axillary \_\_\_\_\_

mammary \_\_\_\_\_

pulmonary \_\_\_\_\_

**-ic**                    pertaining to      chronic \_\_\_\_\_

***Chronic** conditions occur over a long period of time, as opposed to **acute** conditions, which are sharp, sudden, and brief.*

pelvic \_\_\_\_\_

## PROCEDURAL SUFFIXES

The following suffixes describe *procedures* used in patient care.

Suffix	Meaning	Terminology	Meaning
<b>-centesis</b>	surgical puncture to remove fluid	thorac <u>entesis</u> _____	<i>This term is a shortened form of thoracocentesis. See Figure 3-7.</i>
		amnioc <u>entesis</u> _____	<i>See Figure 3-8.</i>
		arthroc <u>entesis</u> _____	<i>This procedure is commonly performed on the knee joint to withdraw fluid for diagnosis or treatment.</i>
<b>-ectomy</b>	removal, resection, excision	tonsill <u>ectomy</u> _____	<i>Tonsils and adenoids are lymph tissue in the pharynx (throat). Lymph is composed of white blood cells that fight infection. See Figure 3-9.</i>
		hyster <u>ectomy</u> _____	<i>In a <b>total hysterectomy</b>, the entire uterus, including the cervix, is removed. If only a portion of the uterus is removed, the procedure is a partial or <b>subtotal hysterectomy</b>. See Figure 3-10 on page 98.</i>

**FIGURE 3-7** Technique of thoracentesis. **A**, The patient is sitting in the correct position for the procedure. **B**, The needle is advanced, and the fluid (**pleural effusion**) is drained.

**FIGURE 3-8**

**Amniocentesis.** Under ultrasound guidance (imaging based on high-frequency sound waves), the physician inserts a needle through the uterine wall and amnion, into the amniotic cavity. Amniotic fluid, containing fetal cells, is withdrawn and examined for chemicals that indicate fetal defects.

3

**FIGURE 3-9 Tonsils and adenoids.** Removal of the tonsils and adenoids is called **tonsillectomy and adenoidectomy (T&A)**.

**FIGURE 3-10 Total hysterectomy.** In a total abdominal hysterectomy (TAH), the uterus is removed through the abdomen. A TAH-BSO is a total abdominal hysterectomy with bilateral salpingectomy and oophorectomy. Laparoscopic hysterectomy can be performed as well.

oophorectomy \_\_\_\_\_

*Figure 3-11 shows a laparoscopic oophorectomy.*

salpingectomy \_\_\_\_\_

cholecystectomy \_\_\_\_\_

See *Figure 3-12*. Laparoscopic cholecystectomy is performed whenever possible, instead of an open (more invasive) procedure. See **In Person: Gallbladder Stones** on page 106.

mastectomy \_\_\_\_\_

*Table 3-5 lists additional resection procedures.*

**FIGURE 3-11 Laparoscopic oophorectomy.** **A**, Notice the ovary within a plastic bag. The bag was inserted through the laparoscope and then opened, and the ovary was placed inside. **B**, Both are extracted through the laparoscope, leaving the uterus and the cut end of the fallopian tube. (**A** and **B**, Courtesy Dr. A.K. Goodman, Massachusetts General Hospital, Boston, Massachusetts.)

**FIGURE 3-12 Cholecystectomy.** The liver is lifted up to show the **gallbladder** underneath. The pancreas is a long, thin gland located behind and to the left of the stomach, toward the spleen. The common bile duct carries bile from the liver and gallbladder to the intestine. After cholecystectomy, the liver continues to produce bile and release it, via the common bile duct, into the intestine.

**-gram**

record

myelogram \_\_\_\_\_

*MYEL/O means spinal cord in this term. Contrast material is injected into the membranes around the spinal cord (by lumbar puncture), and then x-ray pictures are taken of the spinal cord. This procedure is performed less frequently now that MRI is available.*

mammogram \_\_\_\_\_

See *Figure 3-13*.

**TABLE 3-5 RESECTIONS**

adenectomy	Excision of a gland
adenoidectomy	Excision of the adenoids
appendectomy	Excision of the appendix
colectomy	Excision of the colon
gastrectomy	Excision of the stomach
laminectomy	Excision of a piece of backbone (lamina) to relieve pressure on nerves from a (herniating) disk
myomectomy	Excision of a muscle tumor (commonly a fibroid of the uterus)
pneumonectomy	Excision of lung tissue: total pneumonectomy (an entire lung) or lobectomy (a single lobe)
prostatectomy	Excision of the prostate gland
splenectomy	Excision of the spleen

**FIGURE 3-13 Mammograms** from a 63-year-old woman. The right breast is normal, and the left breast contains a carcinoma (breast cancer) (arrow). (From Frank ED, et al: Merrill's Atlas of Radiographic Positions and Radiologic Procedures, ed 11, vol 2, St. Louis, 2007, Mosby.)

**-graphy**

process of recording

electroencephalography \_\_\_\_\_

mammography \_\_\_\_\_

**Tomosynthesis** is a new mammographic technique that shows clearer and more detailed images. See [Figure 3-14, A and B](#).

angiography \_\_\_\_\_

Contrast material (such as iodine) is injected into an artery or vein, and x-ray images are taken.

3

**FIGURE 3-14 A, Mammography.** The breast is compressed, and x-ray images, craniocaudal (top to bottom) and lateral, are taken. **B,** Image on the left is a mammogram and the image on the right is the same anatomy viewed by digital mammography **tomosynthesis**. (A from Frank ED, et al: Merrill's Atlas of Radiographic Positions and Radiologic Procedures, ed 11, St. Louis, 2007, Mosby. B from Klatt E: Robbins and Coltran Atlas of Pathology, ed 2, Philadelphia, 2010, Saunders.)

**-lysis**

separation,  
breakdown,  
destruction

**dialysis**

The root (LYS, meaning to loosen) in this term is embedded in the suffix (-LYSIS). **Hemodialysis** is the removal of blood for passage through (DIA- means through or complete) a kidney machine to filter out waste materials, such as urea. Another form of dialysis is **peritoneal dialysis**. A special fluid is inserted into the peritoneal cavity through a tube in the abdomen. The wastes seep into the fluid from the blood during a period of time. The fluid and wastes are then drained from the peritoneal cavity. See [Figure 3-15](#).

**FIGURE 3-15 Peritoneal dialysis.** This procedure (or the alternative method of hemodialysis) is necessary when the kidneys are not functioning to remove waste materials (such as urea) from the blood. Without dialysis or kidney transplantation, uremia can result. (From Chabner D-E: *The Language of Medicine*, ed 11, St. Louis, 2017, Elsevier.)

**-plasty** surgical repair, mammoplasty \_\_\_\_\_  
or surgical correction rhinoplasty \_\_\_\_\_

angioplasty \_\_\_\_\_

*Balloon angioplasty is performed on narrowed, blocked coronary arteries that surround the heart. A wire with a collapsed balloon is placed in a clogged artery. Opening of the balloon widens the vessel, allowing more blood to flow through. A **stent** (mesh tube) is placed in the artery to hold it open.*

*See Figure 3-16.*

**-scopy** process of visual examination bronchoscopy \_\_\_\_\_  
laparoscopy \_\_\_\_\_

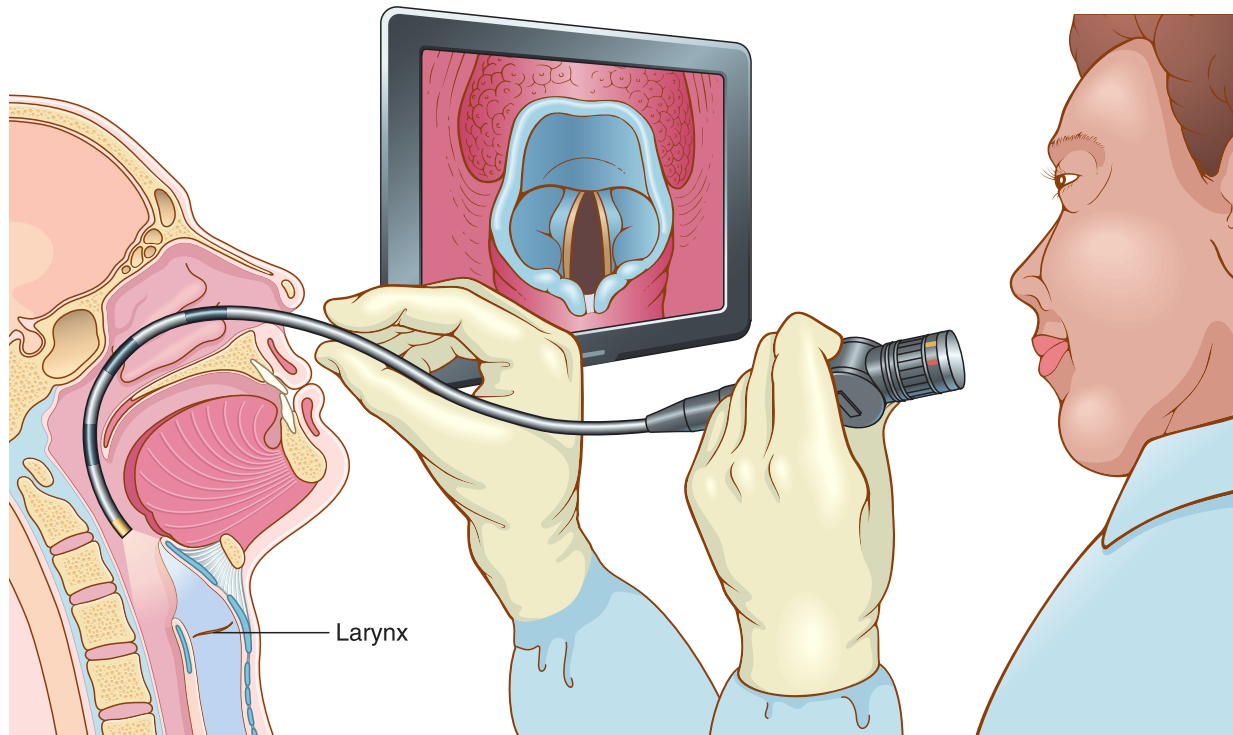

*A common weight loss technique is a laparoscopic gastric band procedure. A band is placed around the upper part of the stomach to create a small pouch, which reduces the capacity of the stomach and helps decrease appetite.*

laryngoscopy \_\_\_\_\_

*See Figure 3-17.*

**FIGURE 3-16** Angioplasty and placement of an intracoronary artery stent. **A**, The stent is positioned at the site of the lesion. **B**, The balloon is inflated, expanding the stent. **C**, The balloon is then deflated and removed, and the implanted stent is left in place. Coronary artery stents are stainless steel mesh, tubelike devices that help hold arteries open. Drug-eluting stents release chemicals to dissolve plaque.

**FIGURE 3-17** Laryngoscopy.

**-stomy** opening

colostomy \_\_\_\_\_

A **-STOMY** procedure is the creation of a permanent or semipermanent opening (stoma) from an organ to the outside of the body. See [Figure 3-18](#). Images of colostomy care are pictured in [Figure 3-19](#). When two tube-like structures are surgically connected within the body, the new connection is an **anastomosis** (see [Figure 3-20](#)). A **colocolostomy** is an anastomosis, a new connection between two previously unconnected portions of the colon.

tracheostomy \_\_\_\_\_

See [Figure 3-21](#).

**-therapy** treatment

radiotherapy  \_\_\_\_\_

chemotherapy \_\_\_\_\_

cryotherapy \_\_\_\_\_

Skin lesions, such as warts, are removed with cryotherapy. Liquid nitrogen or carbon dioxide snow is applied and blistering followed by necrosis results.

### Radiotherapy versus radiology

**Radiotherapy (radiation therapy)** is directed by a radiation oncologist, a medical doctor specializing in **treating** cancer using radiation to kill tumor cells. **Radiology** is the specialty of a radiologist, also a medical doctor, who primarily **diagnoses** conditions using x-ray, magnetic wave, and ultrasound techniques.

**FIGURE 3-18** Locations of **stomas** in the ileum and colon. (Modified from Chabner D-E: *The Language of Medicine*, ed 11, St. Louis, 2017, Elsevier.)

**FIGURE 3-19** Colostomy care.

**FIGURE 3-20** **Anastomoses** are new surgical connections between previously unconnected tube-like structures. (Modified from Chabner D-E: *The Language of Medicine*, ed 11, Philadelphia, 2017, Saunders.)

**FIGURE 3-21** **A, Tracheostomy** with tube in place. **B, Healed tracheostomy incision** after laryngectomy. (**B**, From Black JM, Hawks JH, Keene AM: *Medical-Surgical Nursing: Clinical Management for Positive Outcomes*, ed 6, Philadelphia, 2001, Saunders.)

**-tomy**                    incision,  
                                  cutting into

**craniotomy**  \_\_\_\_\_

**laparotomy** \_\_\_\_\_

**phlebotomy** \_\_\_\_\_

                                  See *Figure 3-22*.

3

**FIGURE 3-22** **Phlebotomy.** After a vein is entered with a needle inserted through the skin, the plunger of the syringe is slowly pulled out to withdraw blood. (From Bonewit-West K: *Clinical Procedures for Medical Assistants*, ed 6, Philadelphia, 2004, Saunders.)

### **-TOMY versus -STOMY**

**-TOMY** indicates a temporary **incision**, as opposed to **-STOMY**, which is a permanent or semipermanent **opening**.

## IN PERSON: GALLBLADDER STONES

*This first-person narrative describes the symptoms and treatment of a 46-year-old woman with gallbladder stones.*

Everyone enjoys a little dessert after dinner, but when the ice cream or a creamy tart leads to pain, most would avoid it. I loved sweets, and despite the revenge they took on my waistline, I still would not pass up an ice cream cone—until my gallbladder decided it had had enough. After several late nights spent doubled over in pain, I tried to steer clear of fatty foods but could not resist the temptation of frozen yogurt.

With one hand I pushed my cart through the supermarket; with the other hand I fed myself some delicious low-fat (not non-fat) frozen yogurt. I never dreamed that the attendant at the quick service window actually gave me soft-serve ice cream. Within 10 minutes of eating the questionable yogurt, I broke out into a sweat; a wave of nausea took me, over and a knifelike pain stabbed me in my right upper quadrant. It hurt even more when I pressed my hand on the area in an attempt to brace the pain.

Several months earlier, after a similar painful episode, I had undergone an ultrasound of my gallbladder, and the surgeon then recommended cholecystectomy. The US showed multiple stones in my gallbladder. Most of the stones were just the right size to lodge in the common bile duct and cause blockage of the outflow of bile that occurs after a fatty meal. When I heard the ultrasound results, I swore off all fatty foods.

I just did not imagine that ice cream masquerading as “low-fat yogurt” would be the straw that broke the camel’s back! Soon enough, I abandoned my shopping cart and apologized to the manager of the store for vomiting all over aisle 4. The unrelenting pain did not cease when I vomited—it only intensified. I have no idea how I made it home and into bed, but my husband found me several hours later in a deep sweat. I managed to call my surgeon and arrange for “semiemergent” surgery the next morning.

Dr. Fernandez and his team performed a laparoscopic cholecystectomy and relayed to me as I came out of anesthesia that I no longer had a “bag of marbles” for a gallbladder. I had a gassy, distended feeling in my abdomen over the two weeks after surgery (carbon dioxide gas is injected into the abdomen before surgery to allow space between abdominal organs). I felt “tight as a drum” for the first few days, and then day by day it went away. My four tiny incisions healed just fine, and in about 2 weeks I was feeling back to normal. Now I can eat ice cream to my heart’s content, only suffering the padding on my waistline, not the stabbing pain just above. Without missing a beat, my liver now delivers the bile into my small intestine right after I eat a fatty meal. The bile emulsifies (breaks down) the fat. I just don’t have a storage bag to hold bile in reserve.

I’ve had an appendectomy, my wisdom teeth removed, and now I gave up my gallbladder! How many more “useless” body parts are there to go?

*Elizabeth Chabner Thompson is the CEO/founder of BFFL Co, a company devoted to improving the patient experience. She is also a physician, ultra-marathoner, wife, and the mother of four children, ages 13 to 19.*

## EXERCISES AND ANSWERS

Complete these exercises and check your answers. An important part of your success in learning medical terminology is checking your answers carefully with the Answers to Exercises beginning on [page 113](#). Visit the Evolve website (<http://evolve.elsevier.com/Chabner/medtermshort>) for additional interactive activities and information.

### A Give meanings for the following suffixes.

1. -algia \_\_\_\_\_
2. -emia \_\_\_\_\_
3. -itis \_\_\_\_\_
4. -megaly \_\_\_\_\_
5. -oma \_\_\_\_\_
6. -pathy \_\_\_\_\_
7. -rrhea \_\_\_\_\_
8. -rrhagia \_\_\_\_\_
9. -sclerosis \_\_\_\_\_
10. -uria \_\_\_\_\_

### B Give definitions for the following terms:

1. myalgia \_\_\_\_\_
2. septicemia \_\_\_\_\_
3. uremia \_\_\_\_\_
4. phlebitis \_\_\_\_\_
5. cardiomegaly \_\_\_\_\_
6. myosarcoma \_\_\_\_\_
7. nephrosis \_\_\_\_\_
8. encephalopathy \_\_\_\_\_
9. rhinorrhea \_\_\_\_\_
10. menorrhagia \_\_\_\_\_

**C** Match the following medical terms with their meanings below. Write each term next to its meaning.

adenocarcinoma  
cardiomyopathy  
esophagitis  
hematoma

hepatomegaly  
ischemia  
leukocytosis

myeloma  
otalgia  
pneumonia

1. Enlargement of the liver \_\_\_\_\_
2. Pain in the ear \_\_\_\_\_
3. Holding back blood from an organ (depriving it of blood supply) \_\_\_\_\_
4. Abnormal condition of white blood cells (slight increase in normal cells to fight infection) \_\_\_\_\_
5. Abnormal condition of the lung (inflammation and accumulation of material often caused by bacterial infection) \_\_\_\_\_
6. Tumor (malignant) of bone marrow \_\_\_\_\_
7. Inflammation of the tube leading from the throat to the stomach \_\_\_\_\_
8. Disease of heart muscle \_\_\_\_\_
9. Collection or mass of blood \_\_\_\_\_
10. Tumor (cancerous) of glandular tissue \_\_\_\_\_

**D** Underline the suffix meaning pertaining to in the following terms and give the area or part of the body referred to.

1. esophageal \_\_\_\_\_
2. inguinal \_\_\_\_\_
3. renal \_\_\_\_\_
4. vascular \_\_\_\_\_
5. pelvic \_\_\_\_\_
6. pulmonary \_\_\_\_\_
7. axillary \_\_\_\_\_
8. peritoneal \_\_\_\_\_
9. mammary \_\_\_\_\_
10. myocardial \_\_\_\_\_

**E** Give meanings for the following suffixes related to procedures.

1. -ectomy \_\_\_\_\_
2. -gram \_\_\_\_\_
3. -centesis \_\_\_\_\_
4. -graphy \_\_\_\_\_
5. -plasty \_\_\_\_\_
6. -lysis \_\_\_\_\_
7. -stomy \_\_\_\_\_
8. -scopy \_\_\_\_\_
9. -tomy \_\_\_\_\_
10. -therapy \_\_\_\_\_

**F** Select from the following terms to complete the sentences below.

angiography  
angioplasty  
bronchoscopy  
chemotherapy

colocolostomy  
colostomy  
hysterectomy  
laryngoscopy

mammogram  
oophorectomy  
phlebotomy  
thoracentesis

1. Surgical repair of a blood vessel using a catheter (tube), balloon, and stent is \_\_\_\_\_.
2. Treatment using chemicals to destroy malignant cells is \_\_\_\_\_.
3. X-ray record of the breast is a/an \_\_\_\_\_.
4. Surgical puncture to remove fluid from the chest is \_\_\_\_\_.
5. A new opening of the large intestine to the outside of the body is a/an \_\_\_\_\_.
6. A new internal connection (anastomosis) between two parts of the large bowel (intestine) is a/an \_\_\_\_\_.
7. Removal of the uterus is a/an \_\_\_\_\_.
8. Process of recording x-ray images of blood vessels after injection of contrast is \_\_\_\_\_.
9. Visual examination of the voice box is \_\_\_\_\_.
10. Incision of a vein to withdraw blood is \_\_\_\_\_.

**G** Write the medical term for the following definitions.

1. Excessive bleeding (discharge of blood) \_\_\_\_\_
2. Hardening of fatty plaque (in the lining of the arteries) \_\_\_\_\_
3. Pertaining to time (occurring over a long period of time) \_\_\_\_\_
4. X-ray record of the spinal cord \_\_\_\_\_
5. Sharp, sudden, brief \_\_\_\_\_
6. Treatment using cold temperatures \_\_\_\_\_
7. Record of electricity in the brain \_\_\_\_\_
8. Surgical puncture to remove fluid from the membrane surrounding the fetus  
\_\_\_\_\_
9. Muscle pain \_\_\_\_\_
10. Malignant tumor of bone marrow \_\_\_\_\_
11. Enlargement of the heart \_\_\_\_\_
12. Abnormal condition of the death of cells \_\_\_\_\_
13. Disease condition of the kidney \_\_\_\_\_
14. Incision of the skull \_\_\_\_\_

**H** What part of the body is inflamed?

- |                       |                       |
|-----------------------|-----------------------|
| 1. neuritis _____     | 11. meningitis _____  |
| 2. arthritis _____    | 12. bronchitis _____  |
| 3. salpingitis _____  | 13. rhinitis _____    |
| 4. otitis _____       | 14. peritonitis _____ |
| 5. hepatitis _____    | 15. vasculitis _____  |
| 6. nephritis _____    | 16. mastitis _____    |
| 7. esophagitis _____  | 17. tonsillitis _____ |
| 8. laryngitis _____   | 18. colitis _____     |
| 9. encephalitis _____ | 19. pharyngitis _____ |
| 10. osteitis _____    | 20. phlebitis _____   |

**I Provide the terms for the following procedures.**

1. Excision of the gallbladder \_\_\_\_\_
2. Excision of the appendix \_\_\_\_\_
3. Excision of a breast \_\_\_\_\_
4. Excision of the uterus \_\_\_\_\_
5. Excision of an ovary \_\_\_\_\_
6. Excision of the voice box \_\_\_\_\_
7. Excision of a kidney \_\_\_\_\_
8. Excision of a gland \_\_\_\_\_
9. Excision of the large intestine \_\_\_\_\_
10. Excision of a fallopian tube \_\_\_\_\_
11. Excision of tonsils \_\_\_\_\_
12. Incision of the skull \_\_\_\_\_
13. Incision of the abdomen \_\_\_\_\_
14. Incision of the chest \_\_\_\_\_
15. Opening of the windpipe to the outside of the body \_\_\_\_\_
16. Opening of the colon to the outside of the body \_\_\_\_\_
17. Surgical puncture to remove fluid from the chest \_\_\_\_\_
18. Surgical puncture to remove fluid from a joint \_\_\_\_\_
19. Incision of a vein (needle or catheter is inserted) \_\_\_\_\_
20. Visual examination of the voice box \_\_\_\_\_

**J** Supply the correct medical term for the following:

1. A stroke is a **cerebro**\_\_\_\_\_ [two words].
2. A heart attack is a **myo**\_\_\_\_\_ [two words].
3. Use of a machine that filters wastes from the blood is **hemo**\_\_\_\_\_.
4. Injection of fluid into the abdominal cavity and then withdrawal of that fluid (containing waste material) is **peri**\_\_\_\_\_ [two words].
5. A benign tumor of muscle is a **my**\_\_\_\_\_.
6. A malignant tumor of muscle is a **myo**\_\_\_\_\_.
7. High levels of wastes (urea) in the blood is **ur**\_\_\_\_\_.
8. Blood in the urine is **hemat**\_\_\_\_\_.
9. High numbers of malignant (cancerous) white blood cells is **leuk**\_\_\_\_\_.
10. Slightly elevated numbers of white blood cells due to an infection in the body is **leuko**\_\_\_\_\_.
11. Normal discharge of blood during menstruation is **men**\_\_\_\_\_.
12. Excessive bleeding during menstruation is **men**\_\_\_\_\_.
13. Hardening of arteries is called **arterio**\_\_\_\_\_.
14. Use of high-energy rays to treat cancerous tumors is **radio**\_\_\_\_\_.

**K** Circle the boldface term that best completes the meaning of the sentences in the following medical vignettes.

1. After routine breast self-examination, Nora felt a small lump in her breast. She consulted her doctor, who scheduled a diagnostic (**mammoplasty, mastectomy, mammogram**). The examination showed a stellate (star-shaped) mass, and a (**biopsy, necropsy, laparoscopy**) revealed an infiltrating ductal carcinoma. Nora decided to have her breast removed (**hysterectomy, mastectomy, salpingectomy**), although her physician gave her the option of having lumpectomy followed by (**cryotherapy, thoracotomy, radiotherapy**).
2. In addition to her surgery, Nora had a sentinel node biopsy of a/an (**inguinal, thoracic, axillary**) lymph node to determine whether the cancer had spread. Injection of contrast revealed the primary (sentinel) lymph node, which was removed and microscopically examined.
3. Victoria had never been comfortable with the bump on her nose. She saw a plastic surgeon, who performed (**mammoplasty, rhinoplasty, angioplasty**).
4. Sylvia had irregular bleeding in between her periods. She was 50 years old and beginning menopause. On pelvic exam, Dr. Hawk felt a large, lobulated uterus. Biopsy revealed a large fibroid, which is a benign (noncancerous) tumor of muscle tissue (**myeloma, myoma, hematoma**). The doctor discussed three surgical options: removal of the fibroid, blockage of blood flow to the fibroid (embolization), or a total abdominal (**gastrectomy, hysterectomy, cholecystectomy**).

5. Sam was experiencing cramps, diarrhea, and a low-grade fever. He was diagnosed with ulcerative (**colitis, meningitis, laryngitis**) and had several bouts of (**uremia, menorrhagia, septicemia**) caused by inflammation and rupture of the bowel wall.
6. Bill felt chest pain every time he climbed a flight of stairs. He went to his doctor, who did a coronary (**myelogram, angiogram, dialysis**), which revealed (**adenocarcinoma, nephrosis, atherosclerosis**) in one of his coronary arteries. The doctor recommended (**angioplasty, thoracentesis, amniocentesis**). This would prevent further (**myosarcoma, ischemia, leukocytosis**) and help Bill avoid a (**peritoneal, vascular, myocardial**) infarction, or heart attack, in the future.

## ANSWERS TO EXERCISES

### A

- |                      |                      |                                 |
|----------------------|----------------------|---------------------------------|
| 1. condition of pain | 5. tumor, mass       | 8. excessive discharge of blood |
| 2. blood condition   | 6. disease condition | 9. hardening                    |
| 3. inflammation      | 7. flow, discharge   | 10. condition of urine          |
| 4. enlargement       |                      |                                 |

### B

- |  |                                     |   |
|--|-------------------------------------|---|
| 1. muscle pain                               | 5. enlargement of the heart         | 8. disease of the brain                     |
| 2. blood infection                           | 6. malignant tumor of muscle        | 9. discharge from the nose                  |
| 3. high levels of wastes (urea) in the blood | 7. abnormal condition of the kidney | 10. excessive bleeding during menstruation. |
| 4. inflammation of a vein                    |                                     |   |

### C

- |                 |   |                    |
|-----------------|---|--------------------|
| 1. hepatomegaly | 5. pneumonia                              | 8. cardiomyopathy  |
| 2. otalgia      | 6. myeloma (also called multiple myeloma) | 9. hematoma        |
| 3. ischemia     | 7. esophagitis                            | 10. adenocarcinoma |
| 4. leukocytosis |   |                    |

### D

- |   |  |
|---|--|
| 1. <b>esophageal</b> —esophagus (tube leading from the throat to the stomach) | 6. <b>pulmonary</b> —lungs   |
| 2. <b>inguinal</b> —groin (area where the thigh meets the trunk of the body)  | 7. <b>axillary</b> —armpit (underarm area)                                   |
| 3. <b>renal</b> —kidney   | 8. <b>peritoneal</b> —peritoneum (membrane surrounding the abdominal cavity) |
| 4. <b>vascular</b> —blood vessels   | 9. <b>mammary</b> —breast  |
| 5. <b>pelvic</b> —hip area  | 10. <b>myocardial</b> —heart muscle  |

### E

- |                                      |                                    |
|--------------------------------------|------------------------------------|
| 1. removal, excision, resection      | 6. separation; breakdown           |
| 2. record                            | 7. new opening                     |
| 3. surgical puncture to remove fluid | 8. process of visual examination   |
| 4. process of recording              | 9. cutting into, incision, section |
| 5. surgical repair                   | 10. treatment                      |

### F

- |                  |                  |                 |
|------------------|------------------|-----------------|
| 1. angioplasty   | 5. colostomy     | 8. angiography  |
| 2. chemotherapy  | 6. colocolostomy | 9. laryngoscopy |
| 3. mammogram     | 7. hysterectomy  | 10. phlebotomy  |
| 4. thoracentesis |                  |                 |

## G

- |                    |                                 |                  |
|--------------------|---------------------------------|------------------|
| 1. hemorrhage      | 7. electroencephalogram         | 11. cardiomegaly |
| 2. atherosclerosis | 8. amniocentesis                | 12. necrosis     |
| 3. chronic         | 9. myalgia                      | 13. nephropathy  |
| 4. myelogram       | 10. myeloma or multiple myeloma | 14. craniotomy   |
| 5. acute           |                                 |                  |
| 6. cryotherapy     |                                 |                  |

## H

- |                       |  |                             |
|-----------------------|--|-----------------------------|
| 1. nerve              | 9. brain   | 15. blood vessels           |
| 2. joint              | 10. bone   | 16. breast                  |
| 3. fallopian tubes    | 11. meninges (membranes surrounding the brain and spinal cord) | 17. tonsils                 |
| 4. ear                |  | 18. colon (large intestine) |
| 5. liver              | 12. bronchial tubes  | 19. throat (pharynx)        |
| 6. kidney             | 13. nose   | 20. veins                   |
| 7. esophagus          | 14. peritoneum   |                             |
| 8. larynx (voice box) |  |                             |

## I

- |                    |                   |                    |
|--------------------|-------------------|--------------------|
| 1. cholecystectomy | 8. adenectomy     | 15. tracheostomy   |
| 2. appendectomy    | 9. colectomy      | 16. colostomy      |
| 3. mastectomy      | 10. salpingectomy | 17. thoracentesis  |
| 4. hysterectomy    | 11. tonsillectomy | 18. arthrocentesis |
| 5. oophorectomy    | 12. craniotomy    | 19. phlebotomy     |
| 6. laryngectomy    | 13. laparotomy    | 20. laryngoscopy   |
| 7. nephrectomy     | 14. thoracotomy   |                    |

## J

1. **cerebrovascular accident**—clot or hemorrhage in an artery of the brain leads to decreased blood flow (ischemia) to brain tissue and necrosis (death of brain cells).
2. **myocardial infarction**—ischemia of heart muscle leads to infarction (necrosis of heart muscle cells).
3. **hemodialysis**—complete separation of waste material from the blood using a machine that receives the patient's blood and after filtration sends the blood back into the patient's body.
4. **peritoneal dialysis**—fluid is introduced into the abdominal cavity and then removed after wastes have passed into the fluid from the peritoneal blood vessels.
5. **myoma**—benign muscle tumors occurring in the uterus are fibroids.
6. **myosarcoma**—malignant tumors of connective or flesh tissue are sarcomas.
7. **uremia**—this indicates failure of the kidneys to eliminate nitrogen-containing wastes, such as urea, creatinine, and uric acid, from the bloodstream.
8. **hematuria**—this indicates bleeding in the urinary tract.
9. **leukemia**—immature, cancerous white blood cells are produced in excess from the bone marrow or lymph nodes.
10. **leukocytosis**—normal, mature white blood cells are produced to fight infection.
11. **menorrhhea**—lining of the uterus breaks down as a result of changes in hormone levels.
12. **menorrhagia**—long or heavy menstrual periods; often caused by benign muscle tumors or fibroids in the uterus.
13. **arteriosclerosis**—the most common type is atherosclerosis, or the collection of fatty plaques in arteries.
14. **radiotherapy**—using high-energy x-rays, gamma rays, and protons to destroy cancerous cells.

## K

- |  |  |
|--|--|
| 1. mammogram, biopsy, mastectomy, radiotherapy | 4. myoma, hysterectomy   |
| 2. axillary                                    | 5. colitis, septicemia   |
| 3. rhinoplasty                                 | 6. angiogram, atherosclerosis, angioplasty, ischemia, myocardial |

## PRONUNCIATION OF TERMS

The terms that you have learned in this chapter are presented here with their pronunciations. The capitalized letters in **BOLDFACE** represent the accented syllable. Pronounce each word out loud; then write the meaning in the space provided. Meanings of all terms can be checked with the *Mini-Dictionary* beginning on [page 349](#) and on the audio section of the *Evolve* website (<http://evolve.elsevier.com/Chabner/medtermshort>).

Term	Pronunciation	Meaning
acute	ah- <b>KUT</b> _____	_____
adenocarcinoma	ah-deh-no-kar-sih- <b>NO</b> -mah _____	_____
adenoma	ah-deh- <b>NO</b> -mah _____	_____
amniocentesis	am-ne-o-sen- <b>TE</b> -sis _____	_____
anastomosis	ah-nah-sto- <b>MO</b> -sis _____	_____
angiography	an-je- <b>OG</b> -rah-fe _____	_____
angioplasty	<b>AN</b> -je-o-plas-te _____	_____
arteriosclerosis	ar-te-re-o-skleh- <b>RO</b> -sis _____	_____
arthralgia	ar- <b>THRAL</b> -je-ah _____	_____
arthropathy	ar- <b>THROP</b> -ah-the _____	_____
atherosclerosis	ah-theh-ro-skleh- <b>RO</b> -sis _____	_____
axillary	<b>AKS</b> -ih-lair-e _____	_____
bronchitis	brong- <b>KI</b> -tis _____	_____
bronchoscopy	brong- <b>KOS</b> -ko-pe _____	_____
carcinoma	kar-sih- <b>NO</b> -mah _____	_____
cardiomegaly	kar-de-o- <b>MEG</b> -ah-le _____	_____
cardiomyopathy	kar-de-o-mi- <b>OP</b> -ah-the _____	_____
chemotherapy	ke-mo- <b>THER</b> -ah-pe _____	_____
cholecystectomy	ko-le-sis- <b>TEK</b> -to-me _____	_____
chronic	<b>KRON</b> -ik _____	_____
colitis	ko- <b>LI</b> -tis _____	_____

colostomy	ko- <b>LOS</b> -to-me _____
colocolostomy	ko-lo-ko- <b>LOS</b> -to-me _____
craniotomy	kra-ne- <b>OT</b> -o-me _____
cystitis	sis- <b>TI</b> -tis _____
dialysis	di- <b>AL</b> -ih-sis _____
electroencephalography	e-lek-tro-en-sef-ah- <b>LOG</b> -rah-fe _____
encephalopathy	en-sef-ah- <b>LOP</b> -ah-the _____
erythrocytosis	eh-rith-ro-si- <b>TO</b> -sis _____
esophageal	e-sof-ah- <b>JE</b> -al _____
esophagitis	e-sof-ah- <b>JI</b> -tis _____
hematuria	he-mah- <b>TUR</b> -e-ah _____
hemorrhage	<b>HEM</b> -o-rij _____
hysterectomy	his-teh- <b>REK</b> -to-me _____
infarction	in- <b>FARK</b> -shun _____
inguinal	<b>ING</b> -gwih-nal _____
ischemia	is- <b>KE</b> -me-ah _____
laparoscopy	lap-ah- <b>ROS</b> -ko-pe _____
laparotomy	lap-ah- <b>ROT</b> -o-me _____
laryngitis	lah-rin- <b>JI</b> -tis _____
laryngoscopy	lah-rin- <b>GOS</b> -ko-pe _____
leukemia	loo- <b>KE</b> -me-ah _____
leukocytosis	loo-ko-si- <b>TO</b> -sis _____
mammogram	<b>MAM</b> -o-gram _____
mammography	mah- <b>MOG</b> -rah-fe _____
mammoplasty	<b>MAM</b> -o-plas-te _____
mastectomy	mas- <b>TEK</b> -to-me _____
meningitis	men-in- <b>JI</b> -tis _____
menorrhagia	men-or- <b>RA</b> -jah _____
menorrhea	men-o- <b>RE</b> -ah _____

myalgia	mi- <b>AL</b> -jah _____
myelogram	<b>MI</b> -eh-lo-gram _____
myeloma	mi-eh- <b>LO</b> -mah _____
myocardial	mi-o- <b>KAR</b> -de-al _____
myoma	mi- <b>O</b> -mah _____
myosarcoma	mi-o-sar- <b>KO</b> -mah _____
necrosis	neh- <b>KRO</b> -sis _____
nephrosis	neh- <b>FRO</b> -sis _____
neuralgia	nu- <b>RAL</b> -jah _____
oophorectomy	o-of-o- <b>REK</b> -to-me <i>or</i> oo-for- <b>EK</b> -to-me _____
otalgia	o- <b>TAL</b> -jah _____
pelvic	<b>PEL</b> -vik _____
peritoneal	per-rih-to- <b>NE</b> -al _____
phlebitis	fleh- <b>BI</b> -tis _____
phlebotomy	fleh- <b>BOT</b> -o-me _____
pneumonia	noo- <b>MO</b> -ne-ah _____
pulmonary	<b>PUL</b> -mo-nair-re _____
radiotherapy	ra-de-o- <b>THAIR</b> -ah-pe _____
renal	<b>RE</b> -nal _____
rhinoplasty	<b>RI</b> -no-plas-te _____
rhinorrhea	ri-no- <b>RE</b> -ah _____
salpingectomy	sal-pin- <b>JEK</b> -to-me _____
septicemia	sep-tih- <b>SE</b> -me-ah _____
thoracentesis	tho-rah-sen- <b>TE</b> -sis _____
tonsillectomy	ton-sih- <b>LEK</b> -to-me _____
tracheostomy	tra-ke- <b>OS</b> -to-me _____
uremia	u- <b>RE</b> -me-ah _____
vascular	<b>VAS</b> -ku-lar _____

## PRACTICAL APPLICATIONS

Answers are given on *page 119*.

### MATCHING

**A** Match the procedure in Column I with an abnormal condition (diagnosis) it is associated with in Column II.

COLUMN I PROCEDURE	COLUMN II ABNORMAL CONDITION (Diagnosis)
1. angioplasty _____	A. uterine adenocarcinoma
2. mammoplasty _____	B. ligament tear of the patella (kneecap)
3. cholecystectomy _____	C. ovarian cyst
4. tonsillectomy _____	D. blockage of the windpipe
5. dialysis _____	E. renal failure
6. hysterectomy _____	F. absence of a breast (postmastectomy)
7. thoracentesis _____	G. pleural effusion (collection of fluid)
8. oophorectomy _____	H. coronary atherosclerosis
9. tracheostomy _____	I. gallbladder calculi (stones)
10. arthroscopy _____	J. pharyngeal lymph node enlargement

**B** Match the sign/symptom (abnormal condition) in Column I with an organ or tissue in Column II.

COLUMN I SIGN/SYMPTOM (Abnormal Condition)	COLUMN II ORGAN OR TISSUE
1. colitis _____	A. uterus
2. phlebitis _____	B. ear
3. menorrhagia _____	C. bone marrow
4. myocardial ischemia _____	D. coronary arteries
5. otalgia _____	E. large bowel
6. uremia _____	F. membrane surrounding spinal cord or brain
7. meningitis _____	G. vein
8. leukemia _____	H. kidney

## WHAT'S YOUR DIAGNOSIS?

### Case Study

A 45-year-old obese woman presents complaining of menorrhagia [heavy periods] with cramping pelvic pain, dizziness when standing, and rapid heart rate. Manual physical examination demonstrates multiple enlarged masses in her uterus. Blood workup reveals low RBCs [red blood cells] and hematocrit [percentage of red blood cells in a volume of blood], normal WBCs and platelets, and slightly elevated blood sugar level. U/S [ultrasound] of the abdomen and pelvis shows multiple fibroids [leiomyomas] of the uterine wall. Patient is admitted to the hospital with recommendation for hysterectomy. During the course of admission she speaks to the resident dietitian about a compulsive eating disorder and agrees to undergo therapy at the hospital's weight loss clinic.

Using the information presented in the case study, what's your diagnosis?

- A. Pelvic pain—female
- B. Obesity
- C. Anemia
- D. Menorrhagia
- E. Fibroid uterus

3

## ANSWERS TO PRACTICAL APPLICATIONS

### MATCHING

- |          |      |      |      |      |       |
|----------|------|------|------|------|-------|
| <b>A</b> | 1. H | 3. I | 5. E | 7. G | 9. D  |
|          | 2. F | 4. J | 6. A | 8. C | 10. B |
| <b>B</b> | 1. E | 3. A | 5. B | 7. F |       |
|          | 2. G | 4. D | 6. H | 8. C |       |

### WHAT'S YOUR DIAGNOSIS?

Answer: E. Fibroid uterus

## PICTURE SHOW

Answer the questions that follow each image. Correct answers are found on [page 123](#).

- The drawing in Figure A shows a procedure (**bariatric surgery**)\* used to treat extreme obesity. First, the stomach (a) is stapled so that it is reduced to the size of a small pouch. Next, the jejunum (b), which is the second part of the small intestine, is brought up to connect with the smaller stomach. This diverts food so that it has a shorter travel time through the intestine with less time for absorption into the bloodstream. What is the name of this surgical procedure?
  - esophageal bypass
  - total gastric resection
  - gastric bypass
  - duodenal resection
- The new connection, or anastomosis (See [Figure 3-20](#)), between the stomach and the second part of the small intestine is a:
  - gastrostomy
  - jejunostomy
  - gastroduodenostomy
  - gastrojejunostomy
- The drawing in Figure B shows another type of bariatric surgery. It is a simpler procedure that creates a small, adjustable stomach pouch without the complications of more invasive surgery. It is called a/an:
  - lap band procedure
  - duodenal anastomosis
  - laparoscopic gastrectomy
  - esophageal pouch procedure

\*Bar/o = weight.

-iatric = pertaining to treatment.

B

(From Lewis SM, Heitkemper MM, Dirksen SR: *Medical-Surgical Nursing: Assessment and Management of Clinical Problems*, ed 5, St. Louis, 2000, Mosby.)

- In the image shown, blood leaves the patient's body to enter a machine that filters out impurities. The filtered blood then circulates back to the patient's body. This procedure is:
  - pericardiocentesis
  - peritoneal dialysis
  - hemodialysis
  - amniocentesis
- The procedure is a treatment for patients with failure of the:
  - kidneys
  - pancreas
  - liver
  - all three organs listed

C

(From Chipps EM, Clanin NJ, Campbell VG: *Neurologic Disorders*, St. Louis, 1992, Mosby.)

- This patient is undergoing a procedure that records brain wave activity. It is called:
  - electrocardiography
  - electroencephalography
  - electromyography
  - electrocraniography
- It may be used to diagnose:
  - seizure disorders (epilepsy)
  - dyspnea
  - paraplegia
  - quadriplegia
  - all four disorders listed

D

(Courtesy Dr. Daniel Simon and Mr. Paul Zampino.)

1. The arrow in **A** shows a narrowing of a coronary artery, preventing blood flow to the heart muscle. A condition caused by decreased blood flow is called:
 

a. nephrosis	c. cardiomegaly
b. uremia	d. ischemia
  
2. **B** shows the coronary artery after stenting. The imaging procedure that is shown is:
 

a. electrocardiography	c. radiotherapy
b. angiography	d. mammography
  
3. The treatment procedure in which coronary arteries are opened using a balloon catheter and stenting is:
 

a. rhinoplasty	c. angioplasty
b. phlebotomy	d. thoracentesis

E

1. The darkened tissue on the toes pictured in the image is called **gangrene**. It is an example of:
  - a. dermatitis
  - b. necrosis
  - c. uremia
  - d. hematoma
  
2. Gangrene may develop as a result of blood vessel injury, frostbite, or conditions such as diabetes and atherosclerosis. It results from:
  - a. hematuria
  - b. chronic cystitis
  - c. ischemia
  - d. cardiomyopathy

## ANSWERS TO PICTURE SHOW

- |          |      |      |      |
|----------|------|------|------|
| <b>A</b> | 1. c | 2. d | 3. a |
| <b>B</b> | 1. c | 2. a |      |
| <b>C</b> | 1. b | 2. a |      |
| <b>D</b> | 1. d | 2. b | 3. c |
| <b>E</b> | 1. b | 2. c |      |

## REVIEW

Write the meanings for the following word parts. Remember to check your answers with the Answers to Review section on [page 126](#).

### SUFFIXES

Suffix	Meaning	Suffix	Meaning
1. -al	_____	15. -megaly	_____
2. -algia	_____	16. -oma	_____
3. -ar	_____	17. -osis	_____
4. -ary	_____	18. -pathy	_____
5. -centesis	_____	19. -plasty	_____
6. -eal	_____	20. -rrhage	_____
7. -ectomy	_____	21. -rrhagia	_____
8. -emia	_____	22. -rrhea	_____
9. -gram	_____	23. -sclerosis	_____
10. -graphy	_____	24. -scopy	_____
11. -ia	_____	25. -stomy	_____
12. -ic	_____	26. -therapy	_____
13. -itis	_____	27. -tomy	_____
14. -lysis	_____	28. -uria	_____

### COMBINING FORMS

Combining Form	Meaning	Combining Form	Meaning
1. aden/o	_____	4. arteri/o	_____
2. amni/o	_____	5. arthr/o	_____
3. angi/o	_____	6. ather/o	_____

Combining Form	Meaning	Combining Form	Meaning
7. axill/o	_____	32. mening/o	_____
8. bronch/o	_____	33. my/o	_____
9. carcin/o	_____	34. myel/o	_____
10. cardi/o	_____	35. necr/o	_____
11. chem/o	_____	36. nephr/o	_____
12. cholecyst/o	_____	37. neur/o	_____
13. chron/o	_____	38. oophor/o	_____
14. col/o	_____	39. oste/o	_____
15. crani/o	_____	40. ot/o	_____
16. cry/o	_____	41. pelv/o	_____
17. cyst/o	_____	42. peritone/o	_____
18. encephal/o	_____	43. phleb/o	_____
19. erythr/o	_____	44. pneumon/o	_____
20. esophag/o	_____	45. pulmon/o	_____
21. hemat/o	_____	46. radi/o	_____
22. hepat/o	_____	47. ren/o	_____
23. hyster/o	_____	48. rhin/o	_____
24. inguin/o	_____	49. salping/o	_____
25. isch/o	_____	50. sarc/o	_____
26. lapar/o	_____	51. septic/o	_____
27. laryng/o	_____	52. thorac/o	_____
28. leuk/o	_____	53. tonsill/o	_____
29. mamm/o	_____	54. trache/o	_____
30. mast/o	_____	55. ur/o	_____
31. men/o	_____	56. vascul/o	_____

## ANSWERS TO REVIEW

### SUFFIXES

- |  |                                  |
|--|----------------------------------|
| 1. pertaining to                       | 15. enlargement                  |
| 2. condition of pain, pain             | 16. tumor, mass                  |
| 3. pertaining to                       | 17. abnormal condition           |
| 4. pertaining to                       | 18. disease condition            |
| 5. surgical puncture to remove fluid   | 19. surgical repair              |
| 6. pertaining to                       | 20. excessive discharge of blood |
| 7. removal, resection, excision        | 21. excessive discharge of blood |
| 8. blood condition                     | 22. flow, discharge              |
| 9. record                              | 23. hardening                    |
| 10. process of recording               | 24. visual examination           |
| 11. condition                          | 25. opening                      |
| 12. pertaining to                      | 26. treatment                    |
| 13. inflammation                       | 27. incision; cutting into       |
| 14. separation, breakdown, destruction | 28. urine condition              |

### COMBINING FORMS

- |   |                                |                             |
|---|--------------------------------|-----------------------------|
| 1. gland                                | 20. esophagus                  | 39. bone                    |
| 2. amnion                               | 21. blood                      | 40. ear                     |
| 3. vessel                               | 22. liver                      | 41. hip area                |
| 4. artery                               | 23. uterus                     | 42. peritoneum              |
| 5. joint                                | 24. groin                      | 43. vein                    |
| 6. plaque, collection of fatty material | 25. to hold back               | 44. lung                    |
| 7. armpit                               | 26. abdomen                    | 45. lung                    |
| 8. bronchial tubes                      | 27. larynx (voice box)         | 46. x-rays                  |
| 9. cancerous                            | 28. white                      | 47. kidney                  |
| 10. heart                               | 29. breast                     | 48. nose                    |
| 11. drug, chemical                      | 30. breast                     | 49. fallopian tube          |
| 12. gallbladder                         | 31. menstruation               | 50. flesh                   |
| 13. time                                | 32. meninges                   | 51. pertaining to infection |
| 14. colon (large intestine)             | 33. muscle                     | 52. chest                   |
| 15. skull                               | 34. spinal cord or bone marrow | 53. tonsil                  |
| 16. cold                                | 35. death                      | 54. trachea (windpipe)      |
| 17. urinary bladder                     | 36. kidney                     | 55. urine, urinary tract    |
| 18. brain                               | 37. nerve                      | 56. blood vessel            |
| 19. red                                 | 38. ovary                      |                             |

## TERMINOLOGY CHECKUP

*In your own words, write the answers on the lines provided. Confirm your answers and check the box next to each item when you know you've "got" it!*

1. Explain the concept of **ischemia**. How can it lead to **necrosis**? How does this relate to a **myocardial infarction** and a **cerebrovascular accident**?

---

---

---

2. Explain the difference between the following procedural suffixes: **-tomy**, **-ectomy**, and **-stomy**. Congratulate yourself if you can explain what a surgeon does in an **anastomosis**!

---

---

---

3. What is **uremia**? How is it treated? Name two different types of **treatments for uremia**.

---

---

---

4. What is the difference between the combining forms, **my/o** and **myel/o**? Give meanings for the following terms that contain these combining forms: **myoma**, **myosarcoma**, **myeloma**, and **myelogram**.

---

---

---

5. Define the following surgical resections: **cholecystectomy**, **splenectomy**, and **oophorectomy**.

---

---

---

**ANSWERS TO TERMINOLOGY CHECKUP**

1. **Ischemia** leads to necrosis because cells are deprived of necessary blood supply (containing oxygen and nutrients). A **myocardial infarction (heart attack)** is when ischemia and necrosis occur in the heart muscle. A **cerebrovascular accident (stroke)** is when ischemia and necrosis occur in the brain.
2. A procedure ending in **-tomy** is an incision or section. A procedure ending in **-ectomy** is an excision or resection. A procedure ending in **-stomy** is the creation of a new opening in an organ to the outside of the body. An **anastomosis** is a new surgical connection between two tubelike structures **within** the body.
3. **Uremia** is a high concentration of waste products (urea, creatine, and uric acid) in the blood when the kidneys fail to function. It is treated by **dialysis**. Two types of dialysis are **hemodialysis** and **peritoneal dialysis**.
4. **My/o** means muscle. **Myel/o** can mean either bone marrow or spinal cord. **Myoma** is a tumor (benign) of muscle. **Myosarcoma** is a tumor (malignant) of muscle. **Myeloma** is malignant condition occurring in bone marrow. **Myelogram** is an x-ray record of the spinal cord.
5. **Cholecystectomy** is removal of a gallbladder. **Splenectomy** is removal of the spleen. **Oophorectomy** is removal of one or both (bilateral) ovaries. In case you are wondering, the body copes very well without these organs. After **cholecystectomy**, without a gallbladder to store bile, the liver secretes bile as needed. After **splenectomy**, without a spleen to produce white blood cells and process worn-out red blood cells, lymph nodes and the liver take over these functions. After **bilateral oophorectomy**, without ovaries to produce eggs and female hormones, adrenal glands produce small amounts of female hormones.

## CHAPTER OBJECTIVES

- To identify and define common prefixes used in medical terms
- To analyze, spell, and pronounce medical terms that contain prefixes
- To apply medical terms in real-life situations

## INTRODUCTION

This chapter reviews the prefixes you studied in [Chapter 1](#) and introduces new prefixes. The list of Combining Forms and Suffixes that follows will help you understand the terminology presented beginning on [page 132](#). Remember to complete all exercises and check your answers. The Pronunciation of Terms and Review are opportunities to test your understanding of all terminology in this chapter.

## COMBINING FORMS AND SUFFIXES

Combining Form	Meaning
<b>abdomin/o</b>	abdomen
<b>an/o</b>	anus (opening of the digestive tract to the outside of the body)
<b>bi/o</b>	life
<b>cardi/o</b>	heart
<b>carp/o</b>	carpals (wrist bones)
<b>cis/o</b>	to cut
<b>cost/o</b>	ribs
<b>crani/o</b>	skull
<b>cutane/o</b>	skin
<b>dur/o</b>	dura mater (outermost meningeal membrane surrounding the brain and spinal cord)
<b>gen/o</b>	to produce, to begin
<b>glyc/o</b>	sugar
<b>hemat/o</b>	blood
<b>later/o</b>	side
<b>men/o</b>	menses (monthly discharge of blood from the lining of the uterus)
<b>nat/i</b>	birth
<b>neur/o</b>	nerve
<b>norm/o</b>	rule, order
<b>oste/o</b>	bone
<b>peritone/o</b>	peritoneum (membrane surrounding the organs in the abdomen)
<b>plas/o</b>	formation, growth, development
<b>ren/o</b>	kidney
<b>scapul/o</b>	scapula (shoulder blade)
<b>son/o</b>	sound
<b>thyroid/o</b>	thyroid gland
<b>top/o</b>	to put, place, position
<b>troph/o</b>	development, nourishment
<b>urethr/o</b>	urethra (tube leading from the bladder to the outside of the body)
<b>uter/o</b>	uterus
<b>ven/o</b>	vein
<b>vertebr/o</b>	vertebra (backbone)

Suffix	Meaning
<b>-al</b>	pertaining to
<b>-ation</b>	process, condition
<b>-cision</b>	process of cutting
<b>-crine</b>	secretion
<b>-dipsia</b>	thirst
<b>-emia</b>	blood condition
<b>-gen</b>	to produce
<b>-graphy</b>	process of recording
<b>-ia</b>	condition
<b>-ic</b>	pertaining to
<b>-ine</b>	pertaining to
<b>-ism</b>	condition, process
<b>-lapse</b>	to fall, slide
<b>-lysis</b>	loosening, breakdown, separation, destruction
<b>-meter</b>	to measure
<b>-mission</b>	to send
<b>-mortem</b>	death
<b>-oma</b>	tumor, mass
<b>-ous</b>	pertaining to
<b>-partum</b>	birth
<b>-pathy</b>	disease condition
<b>-phagia</b>	eating
<b>-phasia</b>	speech
<b>-plasia</b>	formation (condition)
<b>-plasm</b>	formation (tissue)
<b>-plegia</b>	paralysis
<b>-pnea</b>	breathing
<b>-rrhea</b>	flow, discharge
<b>-scopy</b>	process of visual examination
<b>-section</b>	to cut
<b>-stasis</b>	to stand, place, stop, control
<b>-tension</b>	pressure
<b>-thesis</b>	to put, place (state of putting or placing)
<b>-tic</b>	pertaining to
<b>-trophy</b>	nourishment; development
<b>-um</b>	structure
<b>-uria</b>	urine condition
<b>-y</b>	process, condition

## PREFIXES AND TERMINOLOGY

Prefix	Meaning	Terminology	Meaning
<b>a-, an-</b>	no, not, without	<u>apnea</u> _____	<i>In this term, the root (PNE, meaning breathing) is embedded in the suffix (-PNEA). Sleep apnea occurs when breathing stops suddenly during sleep.</i>
		<u>aphasia</u> _____	<i>A stroke affecting the language area of the brain can produce this condition.</i>
		<u>atrophy</u> _____	<i>Disuse of a muscle can result in muscular atrophy. Muscles shrink as cells decrease in size.</i>
		<u>anemia</u> _____	<i>Anemia is a condition in which there is a lower-than-normal number of red blood cells or a decrease in hemoglobin within the cells. <a href="#">Table 4-1</a> lists different forms of anemia.</i>
		<u>amenorrhea</u> _____	
<b>ab-</b>	away from	<u>abnormal</u> _____	
<b>ad-</b>	toward, near	<u>adrenal glands</u> _____	<i>See <a href="#">Figure 4-1</a>.</i>

**TABLE 4-1 ANEMIAS**

aplastic anemia	Bone marrow fails to produce red blood cells (erythrocytes), white blood cells (leukocytes), and clotting cells (platelets).
hemolytic anemia	Red blood cells are destroyed (-LYTIC), and bone marrow cannot compensate for their loss. This condition can be hereditary or acquired (after infection or chemotherapy) or can occur when the immune system acts against normal red blood cells (autoimmune condition).
iron deficiency anemia	Low iron levels lead to low hemoglobin concentration or deficiency of red blood cells.
pernicious anemia	The mucous membrane of the stomach fails to produce a substance (intrinsic factor) that is necessary for the absorption of vitamin B <sub>12</sub> and the proper formation of red blood cells.
sickle cell anemia	Erythrocytes assume an abnormal crescent or sickle shape; this “sickling” is due to the inheritance of an abnormal type of hemoglobin. The sickle-shaped cells clump together, causing clots that block blood vessels.

**FIGURE 4-1 Adrenal glands.** These two endocrine glands are above each kidney. (Modified from Chabner D-E: The Language of Medicine, ed 11, St. Louis, 2017, Elsevier.)

**ana-** up, apart

analysis  \_\_\_\_\_

**ante-** before, forward

antepartum \_\_\_\_\_

**anti-** against

antibody \_\_\_\_\_

*Protein made by white blood cells—literally, a “body” working “against” foreign substances.*

antigen \_\_\_\_\_

*Antigens are foreign substances, such as bacteria and viruses. When antigens enter the body, they stimulate white blood cells to produce antibodies that act against the antigens.*

 **Analysis of urine**

A **urinalysis** (urine + analysis) is the separation of urine to determine its components. The following chart shows typical urinalysis findings:

Test	Normal	Abnormal
1. Color	light yellow	red (hematuria)
2. Clarity	clear	cloudy (infection)
3. pH (chemical nature)	slightly acidic	alkaline (infection)
4. Protein	very slight	proteinuria (renal disease)
5. Sugar	none	glycosuria (diabetes mellitus)

antibiotic \_\_\_\_\_

*Antibiotics are produced **outside** the body by microorganisms and primitive plants called molds. Examples are penicillin and erythromycin. As disease-fighting medications, they are taken by mouth or through intravenous injection, or applied topically to be absorbed through the skin.*

bi- two, both

bilateral \_\_\_\_\_

brady- slow

bradycardia \_\_\_\_\_

con- with, together

congenital \_\_\_\_\_

*A congenital anomaly is an irregularity (anomaly) present at birth. Examples are webbed fingers and toes and heart defects. See [Figure 4-2](#).*

dia- complete, through

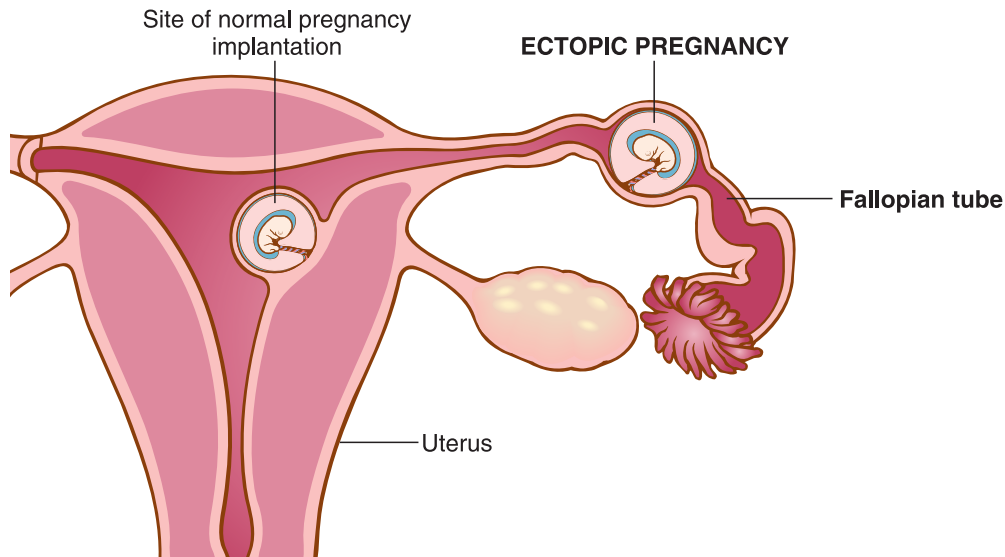

diarrhea \_\_\_\_\_

*Feces (stools) are loose and watery. Normal water reabsorption through the walls of the colon is impaired.*

4

**FIGURE 4-2 Webbed toes.** The foot on the left (pale) shows “webbing” of the toes (syndactyly). On the right, another person’s foot (darker) has normal toes. (From Chabner D-E: *The Language of Medicine*, ed 11, St. Louis, 2017, Elsevier.)

**FIGURE 4-3 Ectopic pregnancy.** The fallopian tube (ectopic tubal pregnancy) is the most common site for ectopic pregnancies (95%), but they can also occur on the ovary or on the surface of the peritoneum. Normal implantation takes place on the inner lining (endometrium) of the uterus.

<b>dys-</b>	bad, painful, difficult, abnormal	<u>dys</u> pnea _____
		<u>dys</u> phagia _____
		<u>dys</u> plasia  _____
		<u>dys</u> menorrhea _____
		<u>dys</u> uria _____ <i>Dysuria is often a symptom of a urinary tract infection (UTI).</i>
<b>ec-</b>	out, outside	<u>ec</u> topic pregnancy _____ <i>Figure 4-3 shows an ectopic tubal pregnancy.</i>

 **-Plasia, -phagia, and -phasia**  
 Don't confuse these very different suffixes: **-plasia (PLAY-zhah)** means formation, **-phagia (FAY-jah)** means eating or swallowing, and **-phasia (FAY-ze-ah)** means speech.

TABLE 4-2 TYPES OF ENDOSCOPY PROCEDURES*	
arthroscopy	Visual examination of a joint
bronchoscopy	Visual examination of the bronchial tubes
colonoscopy	Visual examination of the colon (large intestine)
cystoscopy	Visual examination of the urinary bladder
esophagogastrosocopy	Visual examination of the esophagus and stomach
hysteroscopy	Visual examination of the uterus
laparoscopy	Visual examination of the abdomen
laryngoscopy	Visual examination of the larynx (voice box)
mediastinoscopy	Visual examination of the mediastinum
sigmoidoscopy	Visual examination of the sigmoid colon (the lower, S-shaped part of the large intestine)

\*For images of these procedures, visit the Evolve website for this book (<http://evolve.elsevier.com/Chabner/medtermshort>).

**endo-** within, in, inner endoscopy \_\_\_\_\_  
*Table 4-2 lists types of endoscopy procedures.*

endocrine glands \_\_\_\_\_  
*The adrenal glands are endocrine glands. Table 4-3 lists the major endocrine glands and the hormones that they secrete.*

TABLE 4-3 MAJOR ENDOCRINE GLANDS AND SELECTED HORMONES	
GLAND	HORMONES
adrenal glands	Adrenaline (epinephrine)
ovaries	Estrogen Progesterone
pancreas	Insulin
parathyroid glands	Parathyroid hormone (PTH)
pituitary gland	Adrenocorticotrophic hormone (ACTH) Follicle-stimulating hormone (FSH) Growth hormone (GH) Thyroid-stimulating hormone (TSH)
testes	Testosterone
thyroid gland	Thyroxine (T4)

**FIGURE 4-4 Epidural and subdural hematomas.** The dura mater is the outermost of the three meninges (membranes) around the brain and spinal cord.

**epi-** above, upon      epidural hematoma \_\_\_\_\_  
*Figure 4-4 illustrates epidural and subdural hematomas.*

epidermis \_\_\_\_\_  
*The three layers of the skin, from outermost to innermost, are the epidermis, dermis, and subcutaneous layer. See Appendix 1, Body Systems, page 215.*

**ex-** out      excision \_\_\_\_\_

**extra-** outside of      extrahepatic \_\_\_\_\_

**hemi-** half      hemigastrectomy \_\_\_\_\_

hemiplegia \_\_\_\_\_  
*One side of the body is paralyzed; usually caused by a cerebrovascular accident or brain lesion, such as a tumor. The resulting paralysis occurs on the side opposite the brain disorder.*

**hyper-** excessive, too much, above

hyperthyroidism \_\_\_\_\_  
*Figure 4-5 shows position of the thyroid gland in the neck.*

hyperplasia \_\_\_\_\_  
*Cells increase in number. The prostate gland is enlarged in benign prostatic hyperplasia (BPH).*

hypertrophy \_\_\_\_\_  
*Cells increase in size, not in number. The opposite of hypertrophy is **atrophy** (cells shrink in size). See Figure 4-6.*

hypertension \_\_\_\_\_  
*Risk factors that contribute to high blood pressure are increasing age, smoking, obesity, heredity, and a stressful lifestyle.*

hyperglycemia \_\_\_\_\_  
*May also be a sign of **diabetes mellitus**. Insulin either is not secreted or is improperly utilized so that sugar accumulates in the bloodstream and spills over into the urine (glycosuria).*

4

**FIGURE 4-5** **Thyroid gland**, located in the front of the trachea in the neck. The thyroid gland produces too much hormone in hyperthyroidism.

**FIGURE 4-6** Differences between **normal cells**, **hyperplasia**, **hypertrophy**, and **atrophy**.

<b>hypo-</b>	deficient, too little, below	<u>hypoglycemia</u> _____ <i>Overproduction of insulin or an overdose (from outside the body—exogenously) of insulin can lead to hypoglycemia, as glucose is removed from the blood at an increased rate.</i>
<b>in-</b>	in, into	<u>incision</u> _____
<b>inter-</b>	between	<u>intervertebral</u> _____ <i>An intervertebral disk lies between any two vertebrae.</i>
<b>intra-</b>	within	<u>intrauterine</u> _____ <u>intravenous</u> _____ <i>The abbreviation for intravenous is IV. See Figure 4-7.</i>

**FIGURE 4-7** Intravenous set up for anesthesia administration.

**FIGURE 4-8 Metastasis.** Note the difference between a primary breast cancer and breast cancer that has metastasized to the lung.

4

**mal-** bad

malignant  \_\_\_\_\_

**meta-** change, beyond

metastasis \_\_\_\_\_

*This term literally means a “change of place” (-STASIS). It is the spread of a cancerous tumor from its original place to a secondary location in the body. See [Figure 4-8](#).*

metacarpals \_\_\_\_\_

*The carpal bones are the wrist bones, and the metacarpals are the hand bones, which are beyond the wrist. See the x-ray image of the hand in [Figure 4-9](#).*

### Malignant versus benign

The root IGN comes from the Latin *ignis*, meaning “fire.” A malignant tumor is a cancerous growth that spreads like a “wildfire” from its original location to other organs. A benign tumor (BEN- means “good”) is a noncancerous growth that does not spread.

**FIGURE 4-9 Metacarpals.** This x-ray image of a hand shows metacarpals, carpals (wrist bones), and phalanges (finger bones).

**neo-**      new                      neoplasm \_\_\_\_\_

neoplastic \_\_\_\_\_

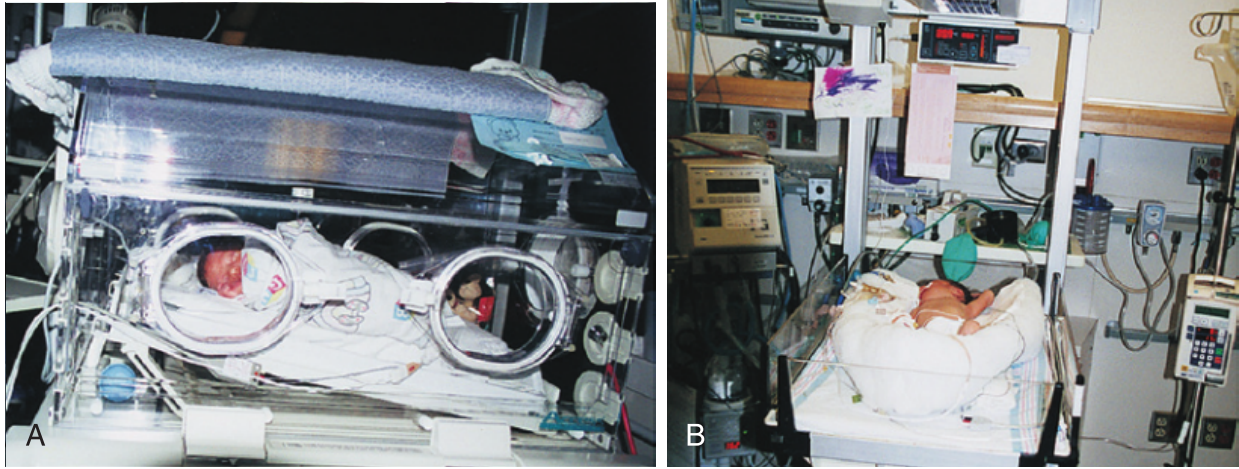

neonatal \_\_\_\_\_

*Neonates (see Figure 4-10) who are born prematurely are often cared for in the neonatal intensive care unit (NICU—pronunciation is **NIK-u**). See Figure 4-10.*

 **Intensive care units**

Note the pronunciations and meanings of other hospital intensive care units:

MICU ( <b>MIK-u</b> )	medical intensive care unit
MSICU ( <b>M-SIK-u</b> )	medical/surgical intensive care unit
PACU ( <b>PAK-U</b> )	post anesthesia care unit
PICU ( <b>PIK-u</b> )	pediatric or psychiatric intensive care unit
SICU ( <b>SIK-u</b> )	surgical intensive care unit

**FIGURE 4-10** Neonates in the neonatal intensive care unit (NICU).

**A**, Benjamin Oliver Chabner, born May 22, 2001, at 32 weeks (8 weeks premature). **B**, Samuel August “Gus” Thompson, born August 13, 2001, at 36 weeks. Gus needed an endotracheal tube through which he received surfactant, a substance necessary to inflate his lungs. Both children are healthy and a delight to their grandmother. See the dedication page for a current photo!

4

**para-** beside, near,  
along the side of

parathyroid glands

*Figure 4-11 shows the position of the parathyroid glands on the back side of the thyroid gland. The parathyroid glands are endocrine glands that regulate the amount of calcium in bones and in the blood.*

paralysis

*This term came from the Greek paralytikos, meaning “one whose side was loose or weak,” as after a stroke. Now it means a loss of movement in any part of the body caused by a break in the connection between nerve and muscle.*

paraplegia

*-PLEGIA means paralysis, and this term originally meant paralysis of any limb or side of the body. Since the nineteenth century, however, it has indicated paralysis of the lower half of the body.*

**peri-** surrounding

periosteum

perianal

**FIGURE 4-11 Parathyroid glands.** These are four endocrine glands on the posterior (back side) of the thyroid gland.

<b>poly-</b>	many, much	<u>polyuria</u> _____ <u>polyneuropathy</u> _____ <u>polydipsia</u> _____ <i>Symptoms of diabetes mellitus are polyuria and polydipsia.</i>
<b>post-</b>	after, behind	<u>postpartum</u> _____ <u>postmortem</u> _____
<b>pre-</b>	before	<u>precancerous</u> _____ <i>An example of a precancerous lesion is a <b>polyp</b> (benign growth), commonly found in the colon. Polyps are often removed via colonoscopy, because they may eventually become malignant.</i> <u>prenatal</u> _____

**Polyuria and diuretics**

Polyuria is the excretion of abnormally large quantity of urine. Diuretics (DI- from DIA-, meaning “complete”) are drugs that promote polyuria. They are used in the treatment of hypertension to lower blood pressure by removing excess fluid from the body.

**FIGURE 4-12 Uterine prolapse.** Prolapsed uterus is shown in **B**. Normally, the uterus is tilted forward, above the urinary bladder.

**pro-** before, forward

prolapse \_\_\_\_\_

**-LAPSE** means to slide. *Figure 4-12* shows both the normal position of the uterus and its position when prolapsed.

**pros-** before, forward

prosthesis \_\_\_\_\_

An artificial limb is a prosthesis—literally, something “placed before” (as a replacement). *Figure 4-13* shows Amy Palmiero-Winters running with a sports prosthetic leg. *Figure 4-14* shows a total hip replacement and a total knee joint replacement. See **In Person: Total Knee Replacement** on page 149.

**FIGURE 4-13** Amy Palmiero-Winters is the first female with a prosthetic leg to finish the Badwater 135, a 135-mile race from Badwater in Death Valley to Mount Whitney, California.

**FIGURE 4-14** Total hip joint replacement and total knee joint replacement. **A**, In total hip joint replacement, a cementless prosthesis allows porous ingrowth of bone. **B**, In total knee joint replacement, the prosthesis includes a tibial metal retainer and a femoral component. The femoral component is chosen individually for each patient according to the amount of healthy bone present. **C**, X-ray image of knee replacement. (**C**, From Mettler FA: *Essentials of Radiology*, ed 3, Philadelphia, 2014, Saunders.)

**quadri-** four

quadriplegia \_\_\_\_\_  
*Paralysis of all four limbs.*

**re-** back, behind

relapse \_\_\_\_\_  
*Symptoms of disease return when a patient has a relapse. **Exacerbation** is an increase in the severity of a disease or any of its symptoms.*

remission \_\_\_\_\_  
*Symptoms of disease lessen when the disease goes into remission.*

resection \_\_\_\_\_

<b>retro-</b>	back, behind	<u>retroperitoneal</u> _____ <i>The kidneys are retroperitoneal organs. (See Figure 2-4 on page 52.)</i>
<b>sub-</b>	under, less than	<u>subcostal</u> _____  <u>subcutaneous</u> _____  <u>subtotal</u> _____ <i>A subtotal gastrectomy is a partial resection of the stomach.</i>  <u>subscapular</u> _____ <i>The scapula is the shoulder bone. Figure 4-15 shows its location.</i>
<b>syn-</b>	with, together	<u>syndrome</u> _____ <i>-DROME means running or occurring. A syndrome is a group of symptoms and signs of illness that occur together. Table 4-4 gives examples of syndromes.</i>
<b>tachy-</b>	fast	<u>tachycardia</u> _____  <u>tachypnea</u> _____

**FIGURE 4-15 Scapula (shoulder bone), posterior view.** The clavicle is the collarbone, and the humerus is the upper arm bone. (Modified from Chabner D-E: *The Language of Medicine, ed 11, St. Louis, 2017, Elsevier.*)

TABLE 4-4 SYNDROMES\*

SYNDROME	SIGNS AND SYMPTOMS
acquired immunodeficiency syndrome (AIDS)	Severe infections, malignancy (Kaposi sarcoma and lymphoma), fever, malaise (discomfort), and gastrointestinal disturbances. It is caused by a virus that damages lymphocytes (white blood cells).
carpal tunnel syndrome	Pain, tingling, burning, and numbness of the hand and wrist. A nerve leading to the hand is compressed by connective tissue fibers in the wrist.
Down syndrome	Mental retardation, flat face with a short nose, slanted eyes, broad hands and feet, stubby fingers, and protruding lower lip. The syndrome occurs when an extra chromosome is present in each cell of the body.
mitral valve prolapse syndrome	Abnormal sounds (murmurs) heard through a stethoscope placed on the chest. These murmurs indicate that the mitral valve is not closing properly. Chest pain, dyspnea (difficult breathing), and fatigue are other symptoms.
toxic shock syndrome	High fever, vomiting, diarrhea, rash, hypotension (low blood pressure), and shock. It typically is caused by a bacterial infection in the vagina of menstruating women using superabsorbent tampons.

\*See the Evolve website for additional information about syndromes (<http://evolve.elsevier.com/Chabner/medtermsshort>).

<b>trans-</b>	across, through	<u>transabdominal</u> _____ <u>transurethral</u> _____ <i>In a <b>transurethral resection of the prostate gland (TURP)</b>, pieces of the prostate gland are removed through the urethra. This procedure relieves symptoms of <b>benign prostatic hyperplasia (BPH)</b>. See <b>Figure 1-13</b> page 20.</i>
<b>tri-</b>	three	<u>tricuspid valve</u> _____ <i>-CUSPID means “pointed end,” as of a spear. The tricuspid valve is on the right side of the heart, while the mitral (bicuspid) valve is on the left side of the heart. <b>Figure 4-16</b> shows the location of both valves and indicates the pathway of blood through the heart.</i>
<b>ultra-</b>	beyond	<u>ultrasonography</u> _____ <i><b>Figure 4-17</b> shows an ultrasonogram (sonogram) of a fetus.</i>
<b>uni-</b>	one	<u>unilateral</u> _____

**FIGURE 4-16** Tricuspid and mitral valves of the heart. Blood enters the **right atrium** of the heart (1) from the big veins (venae cavae) and passes through the **tricuspid valve** to the **right ventricle** (2). Blood then travels to the **lungs** (3), where it loses carbon dioxide (a gaseous waste) and picks up oxygen. Blood returns to the heart into the **left atrium** (4) and passes through the **mitral valve** to the **left ventricle** (5). It is then pumped from the left ventricle out of the heart into the largest artery, the **aorta** (6), which carries the blood to all parts of the body.

**FIGURE 4-17** **A**, Ultrasonogram showing my grandson Samuel August “Gus” Thompson as a 19-week-old fetus. **B**, Three-dimensional sonogram. (**A**, Courtesy Dr. Elizabeth Chabner Thompson. **B**, From Hagen-Ansert SL: Textbook of Diagnostic Ultrasonography, ed 6, St. Louis, 2006, Mosby.)

## IN PERSON: TOTAL KNEE REPLACEMENT (TKR)

I had endured many years of diminishing mobility in my right leg, alleviated somewhat by occasional cortisone shots and two arthroscopic surgeries. While stitching the second arthroscopic wound, my orthopedist said, “Nothing more to be done with this one. ... next stop: total knee replacement!” He was right! My TKR procedure was inevitable and indeed very radical.

It involved major trauma to all the supporting muscles, tendons, nerves, and blood vessels. Hence a long period of recuperation was involved. I took advantage of the extra day that was offered to me at MGH (bless Medicare!) for a total hospitalization of five days, during which I had to learn how to perform the most basic functions in new ways. I found, after many trials, that a walker is preferable to crutches. Both are hard on the hands, but the walker is more stable, and the attachable basket is a boon.

For those who are contemplating TKR, the question of where to do the rehab is crucial. If, as I did, you have the conditions to recover at home, that is preferable. The necessary conditions are, first, a partner or caregiver who is available 24/7 for the first few days and who doesn't decide to take a prolonged vacation after that. ... The second relates to the physical conditions at home. Preferably the living area should all be on one level; although climbing stairs becomes one of the protocols of physical therapy, it takes a while to get to that point, and one is not very steady until that time. Easy access to bathrooms and to other living areas is crucial. The third necessary condition is the availability of the physical therapist. Living in the summer and fall months in rural New Hampshire, I was fortunate to qualify for the services of the local VNA [Visiting Nurse Association], and a marvelous physical therapist visited me three times a week for about six weeks. In between visits, I worked hard to win her approval, and although it seemed at first like tackling Everest to lift my leg even one inch off the floor, let alone walk, within about six weeks I could drive, even if I was getting around outside with crutches; within two months I had regained good mobility, and six months later I was as good as new, and ever so grateful. ...

Although I consider this procedure to be nothing short of miraculous, like any major elective surgery, one should not undertake it unless the pain of daily life outweighs its joys. ... when the doctors ask you about the pain, on a scale of 1 to 10, take them seriously. Don't undergo this surgery until it hovers around 8 or 9 ... and then—well, enjoy the results!

*Sidra DeKoven Ezrahi is a professor emeritus of Comparative Literature at the Hebrew University and is a Guggenheim Fellow. She divides her time between Jerusalem, Israel, and Wilmot, New Hampshire.*

## EXERCISES AND ANSWERS

Complete these exercises and check your answers. An important part of your success in learning medical terminology is checking your answers carefully with the Answers to Exercises beginning on [page 158](#). Don't forget to *wRite, Review, and Repeat!*

### A Give meanings for the following prefixes.

1. anti- \_\_\_\_\_
2. ana- \_\_\_\_\_
3. ad- \_\_\_\_\_
4. bi- \_\_\_\_\_
5. brady- \_\_\_\_\_
6. ab- \_\_\_\_\_
7. a-, an- \_\_\_\_\_
8. ante- \_\_\_\_\_
9. con- \_\_\_\_\_
10. dia- \_\_\_\_\_

### B Complete the following sentences with the medical terms listed below.

analysis  
anemia  
antibiotic  
antibody

antigen  
apnea  
atrophy  
bilateral

bradycardia  
diarrhea

1. A patient with hearing loss in both ears has a/an \_\_\_\_\_ condition.
2. When airways collapse or are blocked during sleep, a condition called sleep \_\_\_\_\_ may occur.
3. A protein produced by white blood cells in response to a foreign substance, such as a bacterium or virus, is a/an \_\_\_\_\_.

4. A foreign substance, such as a bacterium or virus, is a/an \_\_\_\_\_.
5. Decrease in hemoglobin in the blood to below the normal range produces a condition known as \_\_\_\_\_.
6. A condition of frequent loose, watery stools that seem to “flow through” the body is called \_\_\_\_\_.
7. The separation of substances into their component parts is known as \_\_\_\_\_.
8. A medication produced from molds or synthesized in a laboratory to destroy micro-organisms is a/an \_\_\_\_\_.
9. A condition in which the heart rate is less than 60 beats per minute is \_\_\_\_\_.
10. Having an arm in a cast and not using it can cause \_\_\_\_\_.

**C Give medical terms for the following meanings.**

1. Without speech: \_\_\_\_\_
2. Lack of menstrual flow: \_\_\_\_\_
3. Before birth: \_\_\_\_\_
4. Glands located near the kidneys: \_\_\_\_\_ glands
5. An irregularity appearing with birth: \_\_\_\_\_ anomaly
6. Separation of waste materials from the blood when the kidneys fail: \_\_\_\_\_

**D Give meanings for the following prefixes.**

- |                 |                 |
|-----------------|-----------------|
| 1. ec- _____    | 6. dys- _____   |
| 2. epi- _____   | 7. endo- _____  |
| 3. hemi- _____  | 8. ex- _____    |
| 4. hyper- _____ | 9. extra- _____ |
| 5. hypo- _____  | 10. in- _____   |

**E** Complete the following sentences using the medical terms listed below.

dysmenorrhea  
dysphagia  
dysplasia  
dyspnea

dysuria  
endoscopy  
epidermis  
excision

extrahepatic  
incision

1. Pain associated with menstrual flow is \_\_\_\_\_.
2. Cutting into a part of the body is a/an \_\_\_\_\_.
3. Any abnormal development in tissues or organs is \_\_\_\_\_.
4. Cutting out of a part of the body is a/an \_\_\_\_\_.
5. Painful burning sensation upon urination is \_\_\_\_\_.
6. Painful breathing that may be caused by anxiety, strenuous exercise, or certain heart conditions is \_\_\_\_\_.
7. The outer layer of skin is the \_\_\_\_\_.
8. Pertaining to outside the liver is \_\_\_\_\_.
9. Difficulty in swallowing is called \_\_\_\_\_.
10. Visual examination (via an endoscope) of what is within an organ is \_\_\_\_\_.

**F** Complete the following medical terms using the meanings provided.

1. High blood pressure is \_\_\_\_\_ **tension**.
2. A mass of blood above the membrane surrounding the brain is a/an \_\_\_\_\_ **dural hemat**\_\_\_\_\_.
3. A pregnancy that is out of its normal place is a/an \_\_\_\_\_ **topic pregnancy**.
4. A condition of excessive (too much) blood sugar is \_\_\_\_\_ **emia**.
5. A condition of deficient (too little) blood sugar is \_\_\_\_\_ **emia**.
6. Glands that secrete hormones within the body are \_\_\_\_\_ **crine glands**.

7. Increase in development (individual cells increase in size) often caused by overuse of a muscle or organ is **hyper**\_\_\_\_\_.
8. Paralysis of half of the body related to a stroke is \_\_\_\_\_**plegia**.
9. Excessive secretion from a gland in front of the trachea is **hyper**\_\_\_\_\_.
10. Increased formation (numbers of cells) is **hyper**\_\_\_\_\_.

**G** Give meanings for the following prefixes.

- |                 |                 |
|-----------------|-----------------|
| 1. intra- _____ | 6. inter- _____ |
| 2. mal- _____   | 7. meta- _____  |
| 3. para- _____  | 8. neo- _____   |
| 4. peri- _____  | 9. post- _____  |
| 5. poly- _____  | 10. pre- _____  |

**H** Give meanings for the following medical terms.

1. intervertebral \_\_\_\_\_
2. metastasis \_\_\_\_\_
3. metacarpals \_\_\_\_\_
4. intravenous \_\_\_\_\_
5. postmortem \_\_\_\_\_
6. periosteum \_\_\_\_\_
7. precancerous \_\_\_\_\_
8. neonatal \_\_\_\_\_
9. paraplegia \_\_\_\_\_
10. malignant \_\_\_\_\_

**I** Complete each of the sentences that follow by selecting from the list of terms below. The bold words in each sentence should help you choose the correct term.

adrenal glands  
dyspnea  
extracranial  
intrauterine

neoplasm  
parathyroid glands  
perianal  
polydipsia

polyneuropathy  
polyuria  
postpartum

1. An injury to the **outside** of the skull is a/an \_\_\_\_\_ lesion.
2. Four small glands in the neck region **near** (posterior to) another endocrine gland are the \_\_\_\_\_.
3. Common symptoms of diabetes are **much** urination, or \_\_\_\_\_, and **much** thirst, or \_\_\_\_\_.
4. People who experience asthma often have **difficult** breathing, which is called \_\_\_\_\_.
5. Bleeding can occur from cracks or sores **surrounding** the opening to the rectum. These are \_\_\_\_\_ fissures.
6. Two glands each located **near** (above) a kidney are \_\_\_\_\_.
7. A **new** growth, which can be malignant or benign, is a/an \_\_\_\_\_.
8. Disease of **many** nerves is known as a/an \_\_\_\_\_.
9. Any problem that affects the fetus **within** the womb is a/an \_\_\_\_\_ condition.
10. Women may experience moodiness and sad feelings **after** birth, a condition known as \_\_\_\_\_ depression.

**J** Give meanings for the following prefixes.

- |                  |                  |
|------------------|------------------|
| 1. pro- _____    | 7. re- _____     |
| 2. quadri- _____ | 8. pros- _____   |
| 3. sub- _____    | 9. retro- _____  |
| 4. tachy- _____  | 10. syn- _____   |
| 5. trans- _____  | 11. ultra- _____ |
| 6. uni- _____    | 12. tri- _____   |

**K** Select from the list of terms below to complete each of the following sentences.

prolapse  
prosthesis  
quadriplegia  
relapse

remission  
resection  
subtotal  
syndrome

tachypnea  
tricuspid  
ultrasonography  
unilateral

1. Removal or cutting out of an organ is a/an \_\_\_\_\_.
2. Test that shows the structure of organs using sound waves beyond the normal range of hearing is \_\_\_\_\_.
3. An artificial part of the body is a/an \_\_\_\_\_.
4. Recurrence of symptoms of an illness is a/an \_\_\_\_\_.
5. Recovery and disappearance of symptoms is a/an \_\_\_\_\_.
6. Rapid breathing is \_\_\_\_\_.
7. If the spinal cord is severed in the cervical region, paralysis of all four limbs, known as \_\_\_\_\_, will result.
8. The \_\_\_\_\_ valve has three parts and is on the right side of the heart, between the upper and lower chambers.
9. If a patient has a/an \_\_\_\_\_ gastrectomy, less than the complete stomach is removed.
10. Pain, tingling, burning, and numbness of the hand are symptoms of carpal tunnel \_\_\_\_\_.

**L** Define the following terms that describe parts of the body.

1. subscapular \_\_\_\_\_
2. transabdominal \_\_\_\_\_
3. retroperitoneal \_\_\_\_\_
4. subcutaneous \_\_\_\_\_
5. intervertebral \_\_\_\_\_

**M** Select from the terms listed below to complete the sentences that follow.

anemia  
aphasia  
paralysis

prolapse  
relapse  
remission

tachycardia  
transurethral

1. After her ninth child, muscles in Ms. Smith's uterine wall weakened, causing her uterus to fall and \_\_\_\_\_ through her vagina.
2. After Mr. Jones' heart attack, his cardiologist noticed a rapid heart rhythm, or \_\_\_\_\_.
3. A cerebrovascular accident (CVA) on the left side of the brain can cause a loss of speech, or \_\_\_\_\_.
4. Menorrhagia and lack of iron in Sharon's diet led to a condition of low hemoglobin and iron deficiency \_\_\_\_\_.
5. The operation to remove part of Bill's enlarged prostate gland involved placing a catheter through his urethra and removing pieces of the gland. The surgery, called a TURP, or \_\_\_\_\_ resection of the prostate gland, improved his ability to urinate. The prostate gland is at the base of the urinary bladder in males (see [Figure 4-18](#)).

**FIGURE 4-18** Prostate gland.

**N** Circle the correct meaning in bold in each of the following statements.

1. Dys- and mal- both mean (**outside, good, bad**).
2. Hypo- and sub- both mean (**under, above, outside**).
3. Epi- and hyper- both mean (**inside, beneath, above**).
4. Con- and syn- both mean (**apart, near, with**).
5. Ultra- and meta- both mean (**new, beyond, without**).
6. Ante-, pre-, and pro- all mean (**before, surrounding, between**).
7. Ec- and extra- both mean (**within, many, outside**).
8. Endo-, intra-, and in- all mean (**painful, within, through**).
9. Post-, re-, and retro- all mean (**behind, slow, together**).
10. Uni- means (**one, two, three**).
11. Tri- means (**one, two, three**).
12. Bi- means (**one, two, three**).

**O** Circle the boldface term that best completes the meaning of the sentences in the following medical vignettes.

- As part of her (**intravenous, postpartum, prenatal**) care, Beatrix underwent (**ultrasonography, endoscopy, urinalysis**) to determine the age, size, and development of her fetus.
- Ellen's pregnancy test was positive, but she had excruciating pelvic pain. After a careful pelvic exam and ultrasound scan, the doctors diagnosed a/an (**epidural, ectopic, subscapular**) pregnancy. She then underwent emergency surgery to remove the implanted tissue from the fallopian tube.
- After noticing a suspicious-looking mole on her upper arm, Carole was diagnosed with (**malignant, benign, subtotal**) melanoma. This type of skin cancer is a/an (**intrauterine, extrahepatic, neoplastic**) process and has a high likelihood of (**paralysis, dysplasia, metastasis**) to other areas of the body.
- Carole's daughter, Annabelle, found a mole on her back and quickly had it checked by her physician. Fortunately, after a biopsy, the pathologic examination revealed a (**transabdominal, precancerous, perianal**) nevus (mole) that was considered (**chronic, unilateral, benign**). In the future, Annabelle will need close follow-up for other suspicious lesions.
- Milton's blood pressure was 160/110 mm Hg. Normal blood pressure is 120/80 mm Hg. To reduce Milton's risk of stroke, his physician prescribed medication to treat his (**bradycardia, hypertension, dyspnea**).

## ANSWERS TO EXERCISES

**A**

- |                 |                     |                       |
|-----------------|---------------------|-----------------------|
| 1. against      | 5. slow             | 8. before, forward    |
| 2. up, apart    | 6. away from        | 9. with, together     |
| 3. toward, near | 7. no, not, without | 10. through, complete |
| 4. two, both    |                     |                       |

**B**

- |              |             |                |
|--------------|-------------|----------------|

| 2. <b>epidural hematoma</b> | 6. <b>endocrine</b>    | 9. <b>hyperthyroidism</b> |
| 3. <b>ectopic</b>           | 7. <b>hypertrophy</b>  | 10. <b>hyperplasia</b>    |
| 4. <b>hyperglycemia</b>     |                        |                           |

## G

- |                                    |                   |                  |
|------------------------------------|-------------------|------------------|
| 1. within                          | 4. surrounding    | 8. new           |
| 2. bad                             | 5. many, much     | 9. after, behind |
| 3. beside, near, along the side of | 6. between        | 10. before       |
|                                    | 7. change, beyond |                  |

## H

- |  |  |
|--|--|
| 1. pertaining to between the vertebrae (backbones)   | 7. pertaining to a condition that comes before malignancy—for example, dysplastic nevi (moles) that precede malignant melanoma |
| 2. change of place or beyond control (spread of a cancerous tumor to a secondary location) | 8. pertaining to new birth (a neonate is a newborn)  |
| 3. beyond the wrist bones (carpals); hand bones  | 9. condition of paralysis of the lower half of the body  |
| 4. pertaining to within a vein   | 10. cancerous; not benign  |
| 5. after death   |  |
| 6. membrane surrounding a bone   |  |

## I

- |                         |                   |                   |
|-------------------------|-------------------|-------------------|
| 1. extracranial         | 5. perianal       | 8. polyneuropathy |
| 2. parathyroid glands   | 6. adrenal glands | 9. intrauterine   |
| 3. polyuria; polydipsia | 7. neoplasm       | 10. postpartum    |
| 4. dyspnea              |                   |                   |

## J

- |                     |                    |                    |
|---------------------|--------------------|--------------------|
| 1. before, forward  | 5. across, through | 9. back, behind    |
| 2. four             | 6. one             | 10. with, together |
| 3. under, less than | 7. back, behind    | 11. beyond         |
| 4. fast             | 8. before, forward | 12. three          |

## K

- |   |                 |              |
|---|-----------------|--------------|
| 1. resection                                      | 4. relapse      | 8. tricuspid |
| 2. ultrasonography                                | 5. remission    | 9. subtotal  |
| 3. prosthesis; literally, something “put forward” | 6. tachypnea    | 10. syndrome |
|   | 7. quadriplegia |              |

## L

- |  |  |
|--|--|
| 1. pertaining to under the scapula (shoulder bone) | 3. pertaining to behind the peritoneum             |
| 2. pertaining to across or through the abdomen     | 4. pertaining to under the skin                    |
|  | 5. pertaining to between the vertebrae (backbones) |

## M

- |                |            |                  |
|----------------|------------|------------------|
| 1. prolapse    | 3. aphasia | 5. transurethral |
| 2. tachycardia | 4. anemia  |                  |

## N

- |          |            |           |
|----------|------------|-----------|
| 1. bad   | 5. beyond  | 9. behind |
| 2. under | 6. before  | 10. one   |
| 3. above | 7. outside | 11. three |
| 4. with  | 8. within  | 12. two   |

## O

- |                                      |                         |
|--------------------------------------|-------------------------|
| 1. prenatal, ultrasonography         | 4. precancerous, benign |
| 2. ectopic                           | 5. hypertension         |
| 3. malignant, neoplastic, metastasis |                         |

## PRONUNCIATION OF TERMS

The terms that you have learned in this chapter are presented here with their pronunciations. The capitalized letters in **BOLDFACE** represent the accented syllable. Pronounce each word out loud; then write its meaning in the space provided. All terms are defined in the *Mini-Dictionary*, beginning on [page 349](#), and on the audio section of the *Evolve* website (<http://evolve.elsevier.com/medtermshort>).

Term	Pronunciation	Meaning
abnormal	ab- <b>NOR</b> -mal _____	
adrenal glands	ah- <b>DRE</b> -nal glanz _____	
analysis	ah- <b>NAL</b> -ih-sis _____	
anemia	ah- <b>NE</b> -me-ah _____	
antepartum	an-te <b>PAR</b> -tum _____	
antibiotic	an-tih-bi- <b>OT</b> -ik _____	
antibody	<b>AN</b> -tih-bod-e _____	
antigen	<b>AN</b> -tih-jen _____	
aphasia	a- <b>FAY</b> -ze-ah _____	
apnea	<b>AP</b> -ne-ah _____	
atrophy	<b>AT</b> -ro-fe _____	
benign	be- <b>NIN</b> _____	
bilateral	bi- <b>LAT</b> -er-al _____	
bradycardia	bra-de- <b>KAR</b> -de-ah _____	
congenital anomaly	kon- <b>JEN</b> -ih-tal ah- <b>NOM</b> -ah-le _____	
dialysis	di- <b>AL</b> -ih-sis _____	
diarrhea	di-ah- <b>RE</b> -ah _____	
dysphagia	dis- <b>FAY</b> -jah _____	
dysplasia	dis- <b>PLAY</b> -zhah _____	
dyspnea	<b>DISP</b> -ne-ah or disp- <b>NE</b> -ah _____	
dysuria	dis- <b>U</b> -re-ah _____	

ectopic pregnancy	ek- <b>TOP</b> -ik <b>PREG</b> -nan-se _____
endocrine glands	<b>EN</b> -do-krin glanz _____
endoscopy	en- <b>DOS</b> -ko-pe _____
epidural hematoma	ep-ih- <b>DUR</b> -al he-mah- <b>TO</b> -mah _____
excision	ek- <b>SIZH</b> -un _____
extrahepatic	eks-tra-heh- <b>PAT</b> -ik _____
hemigastrectomy	heh-me-gast- <b>REK</b> -to-me _____
hemiplegia	heh-me- <b>PLE</b> -jah _____
hyperglycemia	hi-per-gli- <b>SE</b> -me-ah _____
hyperplasia	hi-per- <b>PLA</b> -zhah _____
hypertension	hi-per- <b>TEN</b> -shun _____
hyperthyroidism	hi-per- <b>THI</b> -royd-izm _____
hypertrophy	hi- <b>PER</b> -tro-fe _____
hypoglycemia	hi-po-gli- <b>SE</b> -me-ah _____
incision	in- <b>SIZH</b> -un _____
intervertebral	in-ter- <b>VER</b> -teh-bral _____
intrauterine	in-trah- <b>U</b> -ter-in _____
intravenous	in-trah- <b>VE</b> -nus _____
malignant	mah- <b>LIG</b> -nant _____
metacarpal	met-ah- <b>KAR</b> -pal _____
metastasis	meh- <b>TAS</b> -tah-sis _____
neonatal	ne-o- <b>NA</b> -tal _____
neoplastic	ne-o- <b>PLAS</b> -tik _____
paralysis	pah- <b>RAL</b> -ih-sis _____
paraplegia	par-ah- <b>PLE</b> -jah _____
parathyroid glands	par-ah- <b>THI</b> -royd glanz _____
perianal	per-e- <b>A</b> -nal _____
periosteum	per-e- <b>OS</b> -te-um _____

polydipsia	pol-e- <b>DIP</b> -se- _____
polyneuropathy	pol-e-noo- <b>ROP</b> -ah-the _____
polyuria	pol-e- <b>UR</b> -e-ah _____
postmortem	post- <b>MOR</b> -tem _____
postpartum	post- <b>PAR</b> -tum _____
precancerous	pre- <b>KAN</b> -ser-us _____
prolapse	pro- <b>LAPS</b> _____
prosthesis	pros- <b>THE</b> -sis _____
quadriplegia	quah-drih- <b>PLE</b> -jah _____
relapse	re- <b>LAPS</b> _____
remission	re- <b>MISH</b> -un _____
resection	re- <b>SEK</b> -shun _____
retroperitoneal	reh-tro-per-ih-to- <b>NE</b> -al _____
subcostal	sub- <b>KOS</b> -tal _____
subcutaneous	sub-ku- <b>TA</b> -ne-us _____
subdural hematoma	sub- <b>DUR</b> -al he-mah- <b>TO</b> -mah _____
subscapular	sub- <b>SKAP</b> -u-lar _____
subtotal	<b>SUB</b> -to-tal _____
syndrome	<b>SIN</b> -drom _____
tachycardia	tak-eh- <b>KAR</b> -de-ah _____
tachypnea	tak-ip- <b>NE</b> -ah _____
transabdominal	trans-ab- <b>DOM</b> -ih-nal _____
transurethral	trans-u- <b>RE</b> -thral _____
tricuspid valve	tri- <b>KUS</b> -pid valv _____
ultrasonography	ul-trah-son- <b>OG</b> -rah-fe _____
unilateral	u-nih- <b>LAT</b> -er-al _____
urinalysis	u-rih- <b>NAL</b> -ih-sis _____

## PRACTICAL APPLICATIONS

### MATCHING

Match the abnormal condition in Column I with the organ, lesion, or body part in Column II that may be involved in or cause the condition. Answers are found on page 165.

COLUMN I	COLUMN II
1. aphasia _____	A. urinary bladder
2. dysphagia _____	B. colon
3. diarrhea _____	C. uterine cervix
4. quadriplegia _____	D. left-sided brain lesion
5. hyperglycemia _____	E. pancreas
6. dysuria _____	F. lungs
7. paraplegia _____	G. heart
8. bradycardia _____	H. cervical spinal cord lesion
9. dyspnea _____	I. esophagus
10. dysplasia _____	J. lumbar spinal cord lesion

### DISEASE DESCRIPTION: HYPERTHYROIDISM

From the list below, select terms to complete the sentences in the paragraphs that follow.

antibiotics  
antibodies  
bradycardia  
dyspnea

exophthalmos  
goiter  
hyperplastic  
hypersecretion

hypoplastic  
hyposcretion  
neoplastic  
tachycardia

1. Hyperthyroidism, also known as thyrotoxicosis or Graves disease, is marked by an excess of thyroid hormones. There is much evidence for a hereditary factor in the development of this condition, and some researchers consider it to be an autoimmune disorder caused by \_\_\_\_\_ that bind to the surface of thyroid gland cells and stimulate \_\_\_\_\_ of hormones (T3 and T4—triiodothyronine and thyroxine). On histologic examination, the enlarged gland is composed of \_\_\_\_\_ follicles lined with hyperactive cells.

2. Signs and symptoms of hyperthyroidism include restlessness, insomnia, weight loss, sweating, and rapid heartbeat, or \_\_\_\_\_. Abnormal protrusion of the eyes, known as \_\_\_\_\_, is another clinical sign. The patient typically also has an enlarged thyroid gland, called a/an \_\_\_\_\_.

## WHAT'S YOUR DIAGNOSIS?

### CASE STUDY

A 22-year-old sexually active female presents to the ED [emergency department] with history of temperature of 104° F for 2 days, vomiting, diarrhea, and a red spotty rash over her chest and abdomen. She reports that she remembered not removing a tampon from her last menstrual cycle until a week after she had stopped menstruating. Other complaints include dysmenorrhea and dysuria.

Physical examination does not reveal an acute abdomen [sudden, severe abdominal pain] or any RLQ (right lower quadrant) tenderness. Blood test is negative for HCG [human chorionic gonadotropin or pregnancy test]; CBC [complete blood count] reveals elevated white blood cell count; blood cultures are positive for staphylococci.

The patient's fever and dehydration do not subside with initial emergency care, and she is subsequently admitted to the hospital. She is seen by a physician from ID [infectious disease], who confirms that the retained tampon has resulted in the above conditions. Her condition improves with IV fluids and antibiotics.

**Using the information presented in this case study, what's your diagnosis? Answer is found on page 165.**

- A. Dehydration
- B. Fever
- C. Toxic shock syndrome (TSS) with *Staphylococcus aureus*
- D. Rash
- E. Nausea/vomiting

## ANSWERS TO PRACTICAL APPLICATIONS

### MATCHING

- |      |      |      |      |       |
|------|------|------|------|-------|
| 1. D | 3. B | 5. E | 7. J | 9. F  |
| 2. I | 4. H | 6. A | 8. G | 10. C |

### DISEASE DESCRIPTION: HYPERTHYROIDISM

- |   |                                      |
|---|--------------------------------------|
| 1. antibodies, hypersecretion, hyperplastic | 2. tachycardia, exophthalmos, goiter |
|---|--------------------------------------|

### WHAT'S YOUR DIAGNOSIS?

Answer: C. Toxic shock syndrome (TSS) with *Staphylococcus aureus*

## PICTURE SHOW

Answer the questions that follow each image. Correct answers are given on [page 168](#).

(Image from iStock.com / Johnny Greigi.)

- This man is walking with the assistance of a:
  - polyneuropathy
  - anastomosis
  - prosthesis
  - metastasis

(From Zitelli BJ, Davis HW: Campbell's Operative Orthopaedics ed 4, St. Louis, 2008, Saunders.)

- This image shows the feet of a child with a condition called: (HINT: the combining form for toes is DACTYL/O):
  - syndactyly
  - condactyly
  - transdactyly
  - polydactyly
- This condition occurs as a/an:
  - neoplastic anomaly
  - congenital anomaly
  - hypertensive anomaly
  - ectopic pregnancy

C

(Modified from Sorrentino SA: Mosby's Textbook for Nursing Assistants, ed 5, St. Louis, 2000, Mosby.)

- This equipment permits nutrients to enter the bloodstream and is used for:
  - hemodialysis
  - intrauterine feeding
  - intravenous feeding
  - peritoneal dialysis
- Which term describes a condition or procedure that would be likely to make this equipment necessary?
  - metacarpalgia
  - hemigastrectomy
  - polyneuropathy
  - epidural hematoma
  - ultrasonography

D

(From Elkin MK, Perry AG, Potter PA: Nursing Interventions and Clinical Skills, ed 2, St. Louis, 2000, Mosby.)

- The image shows a woman using a device that helps her maintain adequate blood oxygen levels while sleeping. This method is called:
  - airway prosthesis
  - nasogastric intubation
  - bronchoscopy
  - continuous positive airway pressure (CPAP)
- The condition that may require use of such a device during sleep is:
  - bradycardia
  - aphasia
  - apnea
  - dysphagia

E

(From Weinstein WM, Hawkey CJ, Bosch J: Clinical Gastroenterology and Hepatology, St. Louis, 2005, Mosby.)

1. The arrows in this image show abnormal, precancerous, neoplastic lesions in the colon. They are:
  - a. polyps
  - b. fibroids
  - c. prolapsed mitral valves
  - d. metastases
  
2. This image was obtained using:
  - a. intrauterine ultrasonography
  - b. electrocardiography
  - c. transabdominal ultrasonography
  - d. endoscopy

4

## ANSWERS TO PICTURE SHOW

**A** 1. c

**B** 1. d                      2. b

**C** 1. c                      2. b

**D** 1. d                      2. c

**E** 1. a                      2. d

## REVIEW

Write the meaning of each of the following word parts, and remember to check your answers with the Answers to Review on [page 172](#).

### PREFIXES

Prefix	Meaning	Prefix	Meaning
1. a-, an-	_____	20. inter-	_____
2. ab-	_____	21. intra-	_____
3. ad-	_____	22. mal-	_____
4. ana-	_____	23. meta-	_____
5. ante-	_____	24. neo-	_____
6. anti-	_____	25. para-	_____
7. bi-	_____	26. peri-	_____
8. brady-	_____	27. post-	_____
9. con-	_____	28. pre-	_____
10. dia-	_____	29. pro-, pros-	_____
11. dys-	_____	30. quadri-	_____
12. ec-	_____	31. re-, retro-	_____
13. endo-	_____	32. sub-	_____
14. epi-	_____	33. syn-	_____
15. ex-, extra-	_____	34. tachy-	_____
16. hemi-	_____	35. trans-	_____
17. hyper-	_____	36. tri-	_____
18. hypo-	_____	37. ultra-	_____
19. in-	_____	38. uni-	_____

**COMBINING FORMS**

Combining Form	Meaning	Combining Form	Meaning
1. abdomin/o	_____	16. neur/o	_____
2. an/o	_____	17. norm/o	_____
3. bi/o	_____	18. oste/o	_____
4. cardi/o	_____	19. peritone/o	_____
5. carp/o	_____	20. plas/o	_____
6. cis/o	_____	21. ren/o	_____
7. cost/o	_____	22. scapul/o	_____
8. crani/o	_____	23. son/o	_____
9. cutane/o	_____	24. thyroid/o	_____
10. dur/o	_____	25. top/o	_____
11. gen/o	_____	26. troph/o	_____
12. glyc/o	_____	27. urethr/o	_____
13. hemat/o	_____	28. uter/o	_____
14. later/o	_____	29. ven/o	_____
15. nat/i	_____	30. vertebr/o	_____

## SUFFIXES

Suffix	Meaning	Suffix	Meaning
1. -al	_____	20. -partum	_____
2. -ation	_____	21. -pathy	_____
3. -cision	_____	22. -phagia	_____
4. -crine	_____	23. -phasia	_____
5. -dipsia	_____	24. -plasia	_____

## TERMINOLOGY CHECKUP

In your own words, write the answers on the lines provided. Confirm your answers and check the box next to each item when you know you've "got" it!

1. What is the difference between **antigens**, **antibodies**, and **antibiotics**?

---

---

---

2. Explain the difference between a **primary malignant tumor** in the lung and a **breast cancer metastasis** to the lung.

---

---

---

3. What is the difference between a **remission** and a **relapse** of a disease?

---

---

---

4. Define the term **paralysis**. Give meanings for the following terms: **hemiplegia**, **quadriplegia**, and **paraplegia**.

---

---

---

5. What is a **syndrome**? Name three syndromes.

---

---

---

## ANSWERS TO TERMINOLOGY CHECKUP

1. **Antigens** are foreign substances (bacteria, viruses, fungi) that stimulate white blood cells to make **antibodies**, which destroy the antigens.  
**Antibiotics**, however, are medications produced *outside* the body to kill or inhibit the growth of antigens such as bacteria and other microorganisms.
2. A **primary malignant tumor** in the lung originates and grows in the lung. It is composed of lung cancer cells. A **breast cancer metastasis** in the lung originated in the breast and now has traveled to the lung. It is composed of breast cancer cells. A pathology report of the biopsy will reveal this distinction.
3. A **remission** is the *lessening or absence of disease symptoms* during an illness. Patients who have no signs or symptoms of illness are described as being “in remission.”  
A **relapse** is the *return of disease symptoms* (-LAPSE meaning to fall or slide) after a period of time.
4. **Paralysis** is the *loss of muscle function*. It can be caused by a cerebrovascular accident (stroke) or nerve damage in any part of the body. The suffix **-plegia** means *paralysis*. For example, **hemiplegia** (hemi means half) is paralysis of one side of the body, as occurs with a stroke. **Quadriplegia** is paralysis of all four (QUADRI- means four) limbs of the body when spinal nerves in the neck are damaged. **Paraplegia** is paralysis of the lower part of the body when there is damage to lower regions of the spinal cord.
5. A **syndrome** is a group of signs and symptoms that occur together indicating a particular condition, the cause of which is not always known. Examples are: **mitral valve prolapse syndrome, carpal tunnel syndrome, and acquired immunodeficiency syndrome (AIDS)**.

Terminology CheckUp .....	213

## CHAPTER OBJECTIVES

- To describe the training process of physicians
- To identify medical specialists and describe their specialties
- To identify combining forms used in terms that describe specialists
- To decipher medical terminology as written in case reports

## INTRODUCTION

This chapter reviews many of the terms you have learned in previous chapters and adds others related to medical specialists. In the following section, the training of physicians is described, and specialists are listed with their specialties. Next, on [page 179](#), useful combining forms are presented with terminology to increase your medical vocabulary. Finally, short case reports beginning on [page 184](#) illustrate the use of the medical language in context. As you read these reports, congratulate yourself on your understanding of medical terminology!

## MEDICAL SPECIALISTS

Doctors complete 4 years of medical school and then pass national medical board examinations to receive an MD degree (MD stands for Latin *Medicinae Doctor*, “teacher [doctor] of medicine”). They may then begin postgraduate training, which lasts at least 3 years, and in some cases, longer. This postgraduate training is known as *residency training*. Examples of residency programs are:

<b>Anesthesiology</b>	Administration of agents capable of bringing about a loss of sensation
<b>Dermatology</b>	Diagnosis and treatment of skin disorders
<b>Emergency medicine</b>	Care of patients that requires sudden and immediate action
<b>Family practice</b>	Primary care of all members of the family on a continuing basis
<b>Internal medicine</b>	Diagnosis and treatment of usually complex, nonsurgical disorders in adults
<b>Ophthalmology</b>	Diagnosis and treatment of eye disorders
<b>Pathology</b>	Diagnosis of the cause and nature of disease
<b>Pediatrics</b>	Diagnosis and treatment of children’s disorders
<b>Psychiatry</b>	Diagnosis and treatment of disorders of the mind
<b>Radiology</b>	Diagnosis using x-ray studies, including ultrasound and magnetic resonance imaging (MRI)
<b>Surgery</b>	Treatment by manual (SURG- means hand) or operative methods

Examinations are administered after the completion of each residency program to certify the doctor’s competency in that specialty area.

A physician may then choose to specialize further by doing *fellowship training*. Fellowship programs (lasting 2 to 5 years) train doctors in *clinical* (patient care) and research (laboratory) skills. For example, an *internist* (specialist in internal medicine) may choose fellowship training in internal medicine specialties such as neurology, nephrology, endocrinology, and oncology. A surgeon interested in further specialization may do fellowship training in thoracic surgery, neurosurgery, or plastic surgery. On completion of training and examinations, the doctor is then recognized as a specialist in that area of medical practice.

Medical specialists with explanations of their specialties are listed below:

Medical Specialist	Area of Practice
<b>allergist</b>	Treatment of hypersensitivity reactions
<b>anesthesiologist</b>	Administration of agents to prevent pain and unpleasant awareness during surgical and other procedures
<b>cardiologist</b>	Treatment of heart disease
<b>cardiovascular surgeon</b>	Surgery on the heart and blood vessels
<b>colorectal surgeon</b>	Surgery on the colon and rectum
<b>dermatologist</b>	Treatment of skin disorders
<b>emergency practitioner</b>	Immediate evaluation and treatment of acute injury and illness in a hospital setting
<b>endocrinologist</b>	Treatment of endocrine gland disorders
<b>family practitioner</b>	Primary care treatment for families on a continuing basis
<b>gastroenterologist</b>	Treatment of stomach and intestinal disorders
<b>geriatrician</b>	Treatment of diseases of old age
<b>gynecologist</b>	Surgery and treatment for diseases of the female reproductive system
<b>hematologist</b>	Treatment of blood disorders
<b>hospitalist</b>	General medical care of hospitalized patients
<b>infectious disease specialist</b>	Treatment of diseases caused by micro-organisms (bacteria, viruses, fungi, others)
<b>internist</b>	Adult comprehensive care in office of hospital setting
<b>nephrologist</b>	Treatment of kidney diseases
<b>neurologist</b>	Treatment of nerve disorders
<b>neurosurgeon</b>	Surgery on the brain, spinal cord, and nerves
<b>obstetrician</b>	Treatment of pregnant women; delivery of babies
<b>oncologist</b>	Diagnosis and treatment of malignant and benign tumors
<b>ophthalmologist</b>	Surgical and medical treatment of eye disorders
<b>orthopedist</b>	Surgical treatment of bone, muscle, and joint conditions
<b>otolaryngologist</b>	Surgical treatment of ear, nose, and throat disorders
<b>pathologist</b>	Diagnosis of disease by analysis of cells
<b>pediatrician</b>	Treatment of diseases of children
<b>physiatrist</b>	Treatment to restore function after injury or illness; physical medicine and rehabilitation specialist
<b>psychiatrist</b>	Treatment of mental disorders
<b>pulmonologist</b>	Treatment of lung diseases
<b>radiologist</b>	Examination of x-ray images for diagnosis; interpretation of ultrasound, MRI, and nuclear medicine studies
<b>radiation oncologist</b>	Treatment of disease with high-energy radiation
<b>rheumatologist</b>	Treatment of systemic diseases affecting joints and muscles
<b>thoracic surgeon</b>	Surgery on chest organs
<b>urologist</b>	Surgery on the urinary tract and for treatment of male reproductive disorders

Here are two groups of matching exercises for practice with this new terminology. Answers are found on [page 204](#).

**A** Match the medical specialists with the procedures and tests that they perform. Write the name of the specialist on the line provided.

allergist

anesthesiologist

cardiologist

cardiovascular surgeon

endocrinologist

gastroenterologist

gynecologist

hematologist

ophthalmologist

Procedure/Test	Medical Specialist
1. Esophagoscopy and colonoscopy	_____
2. Blood cell counts; bone marrow biopsy	_____
3. Ultrasound examination of the heart; angioplasty	_____
4. Skin testing to determine sensitivity to antigens	_____
5. Serum (blood) level of hormones	_____
6. Vision tests; retinoscopy	_____
7. Coronary artery bypass grafting (CABG)	_____
8. Catheter and IV line insertion for sedation during surgery	_____
9. Pap smear (microscopic examination of cells from the cervix and organs); hysterectomy	_____

**B** Match the medical specialists with the procedures and tests that they perform. Write the name of the specialist on the line provided.

neurologist

nephrologist

orthopedist

pathologist

psychiatrist

pulmonologist

radiologist

radiation oncologist

urologist

Procedure/Test	Medical Specialist
1. Nephrectomy; cystectomy; prostatectomy	_____
2. Personality and mental function tests	_____

3. Use of high-energy beams (photon and proton) to kill tumor cells \_\_\_\_\_
4. Fixation of bone fracture; arthroscopic surgery \_\_\_\_\_
5. Breathing function (spirometry) tests \_\_\_\_\_
6. Microscopic examination of biopsy samples; autopsies \_\_\_\_\_
7. CT scan; MRI; ultrasound examination \_\_\_\_\_
8. Kidney function tests; dialysis \_\_\_\_\_
9. Spinal and cranial nerve reflex tests \_\_\_\_\_

## COMBINING FORMS AND VOCABULARY

The combining forms below should be familiar because they are found in the listed terms describing medical specialists. A medical term is included to illustrate the use of the combining form. Write the meaning of the medical term in the space provided. You can always check your answers with the *Mini-Dictionary* beginning on [page 349](#).

5

Combining Form	Meaning	Medical Term	Meaning
<b>cardi/o</b>	heart	<u>cardiomegaly</u> _____	
<b>col/o</b>	colon (large intestine)	<u>colitis</u>  _____	
<b>dermat/o</b>	skin	<u>dermatitis</u> _____	
<b>endocrin/o</b>	endocrine glands	<u>endocrinology</u> _____	
<b>enter/o</b>	intestines	<u>enteritis</u> _____	

### Ulcerative Colitis and Crohn Disease (Crohn's)

Both of these conditions are types of **inflammatory bowel disease (IBD)**, with similar signs and symptoms, such as abdominal pain, diarrhea, and bleeding from the rectum. While **ulcerative colitis** is confined to the colon, **Crohn's** commonly affects the last part of the small intestine and may involve other areas of the gastrointestinal tract. Lesions can be identified, but causes of both types of IBD are unknown. See *In Person: Living with Crohn's* on [page 195](#).

<b>esthesi/o</b>	sensation	an <u>esthesi</u> ology _____
<b>gastr/o</b>	stomach	<u>gastro</u> scopy _____
<b>ger/o</b>	old age	<u>geri</u> atrics _____
<b>gynec/o</b>	woman, female	<u>gynec</u> ology _____
<b>hemat/o</b>	blood	<u>hemato</u> ma _____
<b>iatr/o</b>	treatment	<u>iatro</u> genic _____ IATR/O means treatment by a physician or with medicines. An iatrogenic condition is produced (-GENIC) adversely by a treatment.
<b>laryng/o</b>	voice box	<u>larynge</u> al _____
<b>lymph/o</b>	lymph	<u>lymphaden</u> opathy _____ <i>Lymph “glands” are actually <b>lymph nodes</b>, located all over the body but especially in <b>axillary</b> (armpit), <b>inguinal</b> (groin), <b>cervical</b> (neck), and <b>mediastinal</b> (area between the lungs) regions. Lymphadenopathy often refers to the presence of malignant cells in lymph nodes.</i>
<b>nephro/o</b>	kidney	<u>nephro</u> stomy _____ <i>A catheter (tube) is inserted into the kidney for drainage of fluid. See <a href="#">Figure 5-1</a>.</i>

**FIGURE 5-1** Nephrostomy.

<b>neur/o</b>	nerve	<u>neuralgia</u> _____
<b>nos/o</b>	disease	<u>nosocomial</u> _____ <i>A nosocomial infection is acquired during hospitalization (COMI/O means to care for).</i>
<b>obstetr/o</b>	midwife	<u>obstetric</u> _____
<b>odont/o</b>	tooth	<u>orthodontist</u>  _____ ORTH/O means straight.
<b>onc/o</b>	tumor	<u>oncogenic</u> _____ <i>Oncogenic viruses give rise to tumors.</i>
<b>ophthalm/o</b>	eye	<u>ophthalmologist</u> _____
<b>opt/o</b>	eye	<u>optometrist</u> _____ <i>An optometrist examines (METR/O means to measure) eyes and prescribes corrective lenses but cannot treat eye diseases.</i>
<b>optic/o</b>	eye	<u>optician</u> _____ <i>Opticians grind lenses and fit glasses, and may treat eye diseases.</i>
<b>orth/o</b>	straight	<u>orthopedist</u> _____ <i>PED/O comes from paidos, the Greek word for "child." In the past, orthopedists were concerned with straightening bone deformities in children. Today, they treat bone, muscle, and joint disorders in adults as well.</i>
<b>ot/o</b>	ear	<u>otitis</u> _____
<b>path/o</b>	disease	<u>pathology</u> _____

**Dental Specialists**

The following are other specialists in dental medicine:

<b>Dental Specialist</b>	<b>Area of Expertise</b>
periodontist	Gums (PERI- means surrounding)
endodontist	Root canal therapy (the root canal is the inner part of a tooth containing blood vessels and nerves)
pedodontist	Children (PED/O means child)
prosthodontist	Replacement of missing teeth with artificial appliances (PROSTH/O = artificial replacement)

**FIGURE 5-2 Radiation therapy.** The patient is positioned to receive radiation therapy. (Figure from stanley45/E+/Getty Images.)

<b>ped/o</b>	child	<u>pediatrics</u> _____
<b>psych/o</b>	mind	<u>psychosis</u> _____
<b>pulmon/o</b>	lung	<u>pulmonary</u> _____
<b>radi/o</b>	x-rays	<u>radiotherapy</u> _____ <i>Radiotherapy is also called radiation therapy. See Figure 5-2.</i>
<b>rect/o</b>	rectum	<u>rectocele</u> _____ <i>-CELE means a hernia or protrusion. The walls of the rectum weaken and bulge forward toward the vagina. See Figure 5-3.</i>

**FIGURE 5-3 Rectocele.** (Modified from Chabner D-E: The Language of Medicine, ed 11, St. Louis, 2017, Elsevier.)

**FIGURE 5-4** Differences between a normal joint and one affected by rheumatoid arthritis.

**rheumat/o** flow, fluid

**rheumatology** \_\_\_\_\_  
*Joints can fill with fluid when diseased—hence, RHEUMAT/O indicates a problem with a swollen joint. Rheumatoid arthritis is a chronic inflammatory disease of joints and connective tissues that leads to deformation of joints. See Figures 5-4 and 5-5.*

5

**Rheumatoid Arthritis and Osteoarthritis**

**Rheumatoid arthritis** first appears when patients (often women) are young, and it has an autoimmune component (antibodies are found that destroy joint tissue). **Osteoarthritis** most often appears in older patients (both men and women) and is marked by degenerative changes that cause destruction of the joint space (see Chapter 1, page 13). Knee and hip replacements may be helpful treatments for patients with osteoarthritis.

**FIGURE 5-5** Advanced rheumatoid arthritis of the hands. Notice the soft tissue swelling and deformed joints—fingers, knuckles, and wrist. Atrophy of muscles and tendons (connecting muscles to bones) allows one joint surface to slip past the other (subluxation). (From Currie G, Douglas G: *The Flesh and Bones of Medicine*, St. Louis, Mosby, 2011.)

<b>rhin/o</b>	nose	<u>rhinorrhea</u> _____
<b>thorac/o</b>	chest	<u>thoracotomy</u> _____
<b>ur/o</b>	urinary tract	<u>urology</u> _____
<b>vascul/o</b>	blood vessels	<u>vasculitis</u> _____

## CASE REPORTS

Here are short case reports related to medical *specialties*. Many of the terms will be familiar to you; others are explained in the *Mini-Dictionary* (beginning on page 349). For every case report, write the meaning of the **boldface** terms in the spaces provided.

### CASE 1

### Cardiology

Mr. Rose was admitted to the cardiac care unit (CCU) with **angina** and a history of **hypertension**.

A **coronary angiogram** (Figure 5-6, A) showed **spasm** of the right coronary artery (closed arrow), causing **acute myocardial ischemia**. The electrocardiogram (ECG) showed **ventricular arrhythmias** as well.

**Nitroglycerin** was administered, and within minutes, the angiogram showed reversal of the spasm (Figure 5-6, B). The ECG recorded reversal of the life-threatening arrhythmias as well. To prevent further ischemia and **myocardial infarction**, Mr. Rose's treatment will include **antiarrhythmic**, **diuretic**, and **anticoagulant** drugs. In the future, he may need an additional procedure to place a stent in his coronary artery to keep it open.

**FIGURE 5-6** **A**, Coronary angiogram showing spasm of the right coronary artery (arrow). **B**, Angiogram showing reversal of the spasm (arrow). (**A** and **B**, From Zipes DP, et al: Braunwald's Heart Disease: A Textbook of Cardiovascular Medicine, ed 7, Philadelphia, 2005, Saunders.)

## CASE 2

## Gynecology

Ms. Sessions has had **dysmenorrhea** and **menorrhagia** for several months. She is also **anemic**. Because of the presence of a **large fibroid**, as seen on a pelvic **ultrasound** image (**sonogram**) (see **Figure 5-7, A**), a **hysterectomy** was recommended. After it was removed, the uterus was opened to reveal multiple fibroids (**leiomyomas**) bulging into the uterine cavity and displaying a firm, white appearance. See **Figure 5-7, B**.

**FIGURE 5-7** **A, Pelvic sonogram. B, Fibroids (leiomyomas).** These are benign tumors of the uterus. (**A**, From Salem S: *The uterus and adnexa*. In Rumack CM, Wilson SR, Charboneau JW, editors: *Diagnostic Ultrasound*, ed 2, St. Louis, 1998, Mosby. **B**, From Cotran RS, Kumar V, Collins T: *Robbins' Pathologic Basis of Disease*, ed 6, Philadelphia, 1999, Saunders.)

**CASE 3**

**Oncology**

John Smith, a 26-year-old law student, was admitted to the hospital after experiencing several months of **fatigue**, low-grade fevers, chest pain, and night sweats. A chest **MRI** scan (see **Figure 5-8**) revealed large **mediastinal** masses, as shown by arrows. **Needle biopsy** confirmed a diagnosis of **Hodgkin lymphoma**. There was no evidence of **lymphadenopathy** or **hepatic** involvement. Treatment included **chemotherapy** followed by **radiotherapy** to the chest. Mr. Smith's **prognosis** is good.

**FIGURE 5-8** Magnetic resonance imaging of the upper body. (From Chabner D-E: The Language of Medicine, ed 11, St. Louis, 2017, Elsevier.)

## CASE 4

## Urology

Scott Jones has a history of lower back pain, associated with **hematuria** and **dysuria**. An abdominal x-ray film (Figure 5-9, A) shows a **renal calculus** (black arrow) in the right upper quadrant. His doctor tells him that renal calculi should be suspected any time a calcification is seen within the renal outline or along the expected course of the **ureter** (dotted lines).

Treatment with shock wave **lithotripsy** (Figure 5-9, B) is expected to crush the stone and relieve his **symptoms**.

**FIGURE 5-9** **A**, An abdominal x-ray image showing a **renal calculus** (arrow). **B**, **Lithotripsy**. (**A**, From Mettler FA: *Essentials of Radiology*, ed 2, Philadelphia, 2005, Saunders. **B**, From Rakel D: *Integrative Medicine*, ed 2, Philadelphia, 2007, Saunders.)

**CASE 5**

**Gastroenterology**

Mr. Pepper suffers from **dyspepsia**, acid reflux, and sharp **abdominal** pain. A recent episode of **hematemesis** has left him very weak and **anemic**. **Gastroscopy** and an **upper GI series** with **barium** revealed the presence of a large **ulcer**. **Figure 5-10** is a photograph of a peptic ulcer located in the stomach. Mr. Pepper will be admitted to the hospital and treated with medication to reduce gastric acid output and with antibiotics to control a bacterium (*Helicobacter*, or *H. pylori*) known to cause ulcers. He will also be scheduled for a partial **gastrectomy**.

**FIGURE 5-10 Peptic (gastric) ulcer.** (From Lewis SM, Heitkemper MM, Dirksen SR: Medical-Surgical Nursing: Assessment and Management of Clinical Problems, ed 5, St. Louis, 2004, Mosby.)

## CASE 6

## Radiology

Evaluation of David Green's **posteroanterior** chest x-ray film (Figure 5-11, A, arrows) shows an ill-defined mass near the right **hilum**. The **lateral** view (Figure 5-11, B, arrows) also shows the mass, and its shaggy outline is very suggestive of **carcinoma**. Further evaluation by **CT scan** (Figure 5-11, C) clearly shows the mass in relation to the **mediastinal** structures such as the **pulmonary artery** (PA) and **aorta** (Ao).

Impression: Lung cancer.

**FIGURE 5-11** A, Posteroanterior chest x-ray view shows an ill-defined mass (arrows). B, Lateral chest x-ray view clearly shows the mass to be posterior to the hilum. C, Computed tomography image clearly shows the mass (arrow) in relation to the mediastinal structures. (A-C, From Mettler FA: *Essentials of Radiology*, ed 2, Philadelphia, 2005, Saunders.)

**CASE 7** *Endocrinology*

A 36-year-old woman known to have **type 1 diabetes mellitus** was brought to the emergency department after being found collapsed at home. She had experienced 3 days of extreme weakness, **polyuria**, and **polydipsia**. It was discovered that a few days before her admission, she had discontinued use of her external **insulin pump** (see [Figure 5-12](#)).

**FIGURE 5-12 External insulin pump.** The device on the patient’s right side is an insulin sensor which continuously monitors insulin levels and communicates with the insulin pump. (Provided by Medtronic.)

## CASE 8

## Orthopedics

A 20-year-old male patient was admitted to the hospital after a motorcycle accident. He was found to have **fractures** of the right **fibula** (see **Figure 5-13, A**), right **femur**, and **pelvis** and **intra-abdominal** injuries. He was taken to surgery, and internal **fixation** of the right femur was performed. A cast was applied to the femur for immobilization, and the fibula healed on its own with **callus** formation (**Figure 5-13, B**).

**FIGURE 5-13** **A**, Fracture of the fibula. **B**, Callus formation, 6 weeks later. (Courtesy Dr. Barbara Weissman, Brigham and Women's Hospital, Boston, Massachusetts. **A** and **B**, From Cotran RS, Kumar V, Collins T: Robbins' Pathologic Basis of Disease, ed 6, Philadelphia, 1999, Saunders.)

**CASE 9**

*Nephrology*

A 52-year-old woman with **chronic renal failure** secondary to long-standing **hypertension** has been maintained on **hemodialysis** for the past 18 months. An **arteriovenous fistula** (Figure 5-14) was created surgically to provide long-term vascular access for hemodialysis. For the past 3 weeks, during the dialysis sessions, she has become moderately **hypotensive**, with symptoms of dizziness. Consequently, we have decided to withhold her **antihypertensive** medications before dialysis.

**FIGURE 5-14** Arteriovenous fistula created for hemodialysis. (From Chabner D-E: The Language of Medicine, ed 11, St. Louis, 2017, Elsevier.)

## CASE 10

## Neurology

Ms. Kindrick is admitted with severe, throbbing **unilateral frontal cephalgia** that has lasted for 2 days. Light makes her cringe, and she has **nausea**. Before the onset of these symptoms, she saw zigzag lines for about 20 minutes and a **scotoma** (see [Figure 5-15](#)). Diagnosis is **acute migraine with aura**. A **vasoconstrictor** is prescribed, and Ms. Kindrick's condition is improving. [Migraine headaches are thought to be caused by sudden **dilation** of blood vessels.]

**FIGURE 5-15 Scotoma.** This abnormal area of the visual field is both “positive” (consisting of bright flickering imagery) and “negative” (displaying a relatively dark area that obscures the visual field). It is called a scintillating scotoma. (From Yanoff M, Duker JS: *Ophthalmology*, ed 2, St. Louis, 2004, Mosby.)

## IN PERSON: LIVING WITH CROHN'S

When a friend told me she was felled by the flu yesterday, I was jealous. To someone with a chronic illness, like me, having something acute always seems luxurious. Lie in bed, read glossy magazines, take over-the-counter meds, sleep it off, and in a matter of days you're okay. I have Crohn disease, a chronic inflammation of the small intestine, which is characterized by flare-ups and remission. During flare-ups, I've experienced fever, diarrhea, vomiting, pain, and intestinal obstruction. Even in remission I am never "okay."

Right now I have been in remission two years after a third surgery to remove yet another portion of my small bowel. This time internal bleeding, a rather rare symptom of Crohn's, necessitated the surgery. I was enduring weekly iron infusions, which turned into bimonthly blood transfusions, as my hemoglobin plummeted to 6 (12 is normal). It was no way to live. After the surgery, the bleeding stopped, but I had bouts of urgent, watery diarrhea for a year. That was no way to live either, and unfortunately, as wonderful as my doctor is, I've found that few physicians want to address after-effects of small bowel surgery. After visiting several doctors and by trial-and-error, I finally got these symptoms under control with codeine, Lomotil, and Metamucil, but I will never be able to absorb vitamin B<sub>12</sub>, so I must inject it monthly for the rest of my life. In addition to taking medicine to cope with having less and less small bowel, I take medicine in the hopes of preventing the next flare-up. Every few weeks, I inject myself with a biologic medicine, Humira, but I must eventually be weaned off this drug because it has possible long-term side effects, the scariest of which is lymphoma. At 52 and with two school-age children, however, I have learned to think of valuing my present quality of life the most, over possible unknown dangers lurking in the future.

I do often think about the past. What would my life be like if our family doctor hadn't told my parents that my constant episodes of diarrhea—which occurred since I was a child—were caused by "nerves?" By the time I was 21, my weight had dropped below 100 pounds, and I was twisted in pain after every meal. My dad arranged for me to visit his own doctor, who gave me a small bowel series that showed I had Crohn's, and that a portion of my small intestine was "as narrow as a pencil." By then it was too late for even prednisone (then the drug of choice despite side effects ranging from puffy face to psychosis) to open up the inflamed passage, and I had my first surgery just months after I was diagnosed. Thinking of those times—as well as all the other flare-up times—makes me flinch. While you can never relive pain, you can remember what it felt like. In my case, it was as if a large metal bike lock chain was being forced through my tender gut.

Before that first surgery, I was just out of college and longing to make my mark on the world, but I spent most of my evenings curled up in my small bedroom, listening to the soothing strains of "Make Believe Ballroom Hour" on the radio. Or, because vomiting and diarrhea usually accompanied the pain, I lay with my back pressed against the cold tiles of the bathroom floor. Later on, as a mom with two

young children, I would lie on the couch watching life swirl around me, feeling guilty that I could not take part.

There was a silver lining to those flare-ups, and that is the tender affection of those around me: husband, family, and friends. When you have Crohn's, no one knows you have it until things get unbearable. It's not the kind of illness you discuss, but when you have pain and fever, you can kind of approximate those times of being felled by the flu. Yet you know that it will take more than a dose of Nyquil or a night's sleep to get "better." You know you'll face another course of medications—often untried ones—or that you will likely end up in the hospital undergoing yet another surgery.

*Nancy J. Brandwein is a writer, editor, and food columnist.*

## EXERCISES AND ANSWERS

*Complete these exercises and check your answers. An important part of your success in learning medical terminology is checking your answers carefully with the Answers to Exercises beginning on page 203.*

5

### **A** Match each of the listed residency programs to its description that follows.

anesthesiology	internal medicine	psychiatry
dermatology	ophthalmology	radiology
emergency medicine	pathology	surgery
family practice	pediatrics	

- Treatment by operation or manual (hand) methods \_\_\_\_\_
- Diagnosis and treatment of often complex medical disorders in adult patients  
\_\_\_\_\_
- Diagnosis and treatment of disorders of the mind \_\_\_\_\_
- Primary care of all family members on a continuing basis \_\_\_\_\_
- Diagnosis and treatment of skin disorders \_\_\_\_\_
- Diagnosis and treatment of eye disorders \_\_\_\_\_
- Diagnosis of disease using x-rays \_\_\_\_\_
- Diagnosis and treatment of children's disorders \_\_\_\_\_
- Care of patients with illness that requires immediate action \_\_\_\_\_
- Administration of agents that produce loss of sensation/awareness \_\_\_\_\_
- Diagnosis of disease by examining cells and tissues \_\_\_\_\_

**B** Name the physician who treats the following problems (first letters are given).

1. kidney diseases: **n**\_\_\_\_\_
2. tumors: **o**\_\_\_\_\_
3. broken bones: **o**\_\_\_\_\_
4. female diseases: **g**\_\_\_\_\_
5. eye disorders: **o**\_\_\_\_\_
6. heart disorders: **c**\_\_\_\_\_
7. nerve disorders: **n**\_\_\_\_\_
8. lung disorders: **p**\_\_\_\_\_
9. mental disorders: **p**\_\_\_\_\_
10. stomach and intestinal disorders: **g**\_\_\_\_\_

**C** Match the medical specialists in Column I to their area of practice in Column II.

Column I	Column II
1. urologist _____	A. operates on the large intestine
2. thoracic surgeon _____	B. treats blood disorders
3. radiation oncologist _____	C. treats thyroid and pituitary gland disorders
4. colorectal surgeon _____	D. rehabilitates after spinal injuries
5. endocrinologist _____	E. treats disorders of childhood
6. obstetrician _____	F. operates on the urinary tract
7. radiologist _____	G. treats disorders of the skin
8. pediatrician _____	H. delivers babies
9. hematologist _____	I. operates on the chest
10. dermatologist _____	J. examines x-ray images to diagnose disease
11. psychiatrist _____	K. treats tumors using high-energy radiation

**D** Complete each of the sentences that follow using a term from the list below.

clinical	oncologist	pathologist
geriatrician	ophthalmologist	research
hospitalist	optician	surgeon
infectious disease specialist	optometrist	orthopedist

1. A doctor who diagnoses and treats diseases that are caused by micro-organisms is a/an \_\_\_\_\_.
2. A doctor who performs bone surgery is a/an \_\_\_\_\_.
3. A doctor who takes care of patients practices \_\_\_\_\_ medicine.
4. A medical professional who grinds lenses and fills prescriptions for eye glasses is a/an \_\_\_\_\_.
5. A doctor who reads biopsy samples and performs autopsies is a/an \_\_\_\_\_.
6. A doctor who treats cancerous tumors is a/an \_\_\_\_\_.
7. A medical professional (nonphysician) who examines eyes, prescribes eyeglasses, and treats eye disorders is a/an \_\_\_\_\_.
8. A doctor who operates on patients is a/an \_\_\_\_\_.
9. A doctor who does experiments with test tubes and laboratory equipment is interested in \_\_\_\_\_ medicine.
10. A doctor who specializes in surgery and medical treatment of disorders of the eye is a/an \_\_\_\_\_.
11. A doctor who specializes in the treatment of older people is a/an \_\_\_\_\_.
12. A physician who cares for hospitalized patients is a/an \_\_\_\_\_.

**E** Which medical specialist would you consult for the following medical conditions? The first letter of the specialist is given.

1. Arthritis: **r** \_\_\_\_\_
2. Otitis media: **o** \_\_\_\_\_
3. Anemia: **h** \_\_\_\_\_
4. Urinary bladder displacement: **u** \_\_\_\_\_
5. Chronic bronchitis: **p** \_\_\_\_\_
6. Cerebrovascular accident: **n** \_\_\_\_\_
7. Breast cancer: **o** \_\_\_\_\_
8. Coronary artery blockages (bypass surgery): **c** \_\_\_\_\_
9. Dislocated shoulder bone: **o** \_\_\_\_\_
10. Thyroid gland enlargement: **e** \_\_\_\_\_
11. Kidney disease: **n** \_\_\_\_\_
12. Acne (skin disorder): **d** \_\_\_\_\_
13. Hay fever (hypersensitivity reaction): **a** \_\_\_\_\_
14. Viral and bacterial diseases: **i** \_\_\_\_\_
15. Rehabilitation after herniated disk: **p** \_\_\_\_\_

**F** Give the meaning for each of the following medical terms.

1. neuralgia \_\_\_\_\_
2. pathology \_\_\_\_\_
3. cardiomegaly \_\_\_\_\_
4. nephrostomy \_\_\_\_\_
5. thoracotomy \_\_\_\_\_
6. laryngeal \_\_\_\_\_
7. otitis \_\_\_\_\_
8. colitis \_\_\_\_\_
9. pulmonary \_\_\_\_\_
10. iatrogenic \_\_\_\_\_
11. gastroscopy \_\_\_\_\_
12. radiotherapy \_\_\_\_\_
13. anesthesiology \_\_\_\_\_
14. enteritis \_\_\_\_\_
15. nosocomial \_\_\_\_\_

**G** Use the following combining forms and suffixes to make the medical terms called for.

Combining Forms		Suffixes	
aden/o	onc/o	-algia	-pathy
col/o	ophthalm/o	-ectomy	-scopy
laryng/o	ot/o	-genic	-stomy
lymph/o	path/o	-itis	-therapy
neph/r/o	psych/o	-logy	-tomy
neur/o	thorac/o	-osis	

- Inflammation of the ear: \_\_\_\_\_
- Removal of a nerve: \_\_\_\_\_
- Incision of the chest: \_\_\_\_\_
- Study of tumors: \_\_\_\_\_
- Pertaining to producing disease: \_\_\_\_\_
- Inflammation of the voice box: \_\_\_\_\_
- Opening of the large intestine to the outside of the body: \_\_\_\_\_
- Visual examination of the eye: \_\_\_\_\_
- Abnormal condition of the mind: \_\_\_\_\_
- Inflammation of the kidney: \_\_\_\_\_
- Removal of the large intestine: \_\_\_\_\_
- Pain in the ear: \_\_\_\_\_
- Treatment of the mind: \_\_\_\_\_
- Pertaining to producing tumors: \_\_\_\_\_
- Disease of lymph glands (nodes): \_\_\_\_\_

**H** Circle the bold term that best completes the meaning of the sentences in the following medical vignettes.

- Dr. Butler is a physician who operates on hearts. He trained as a (**neurologic**, **cardiovascular**, **pulmonary**) surgeon. Often, his procedures require that Dr. Smith, a/an (**gynecologic**, **ophthalmic**, **thoracic**) surgeon, assist him when the surgical problem involves the chest and lungs.

2. Pauline noticed a rash over most of her body. First she saw Dr. Cole, her **(family practitioner, oncologist, radiologist)**, who performs her yearly physicals. Dr. Cole, who is not a/an **(endocrinologist, orthopedist, dermatologist)** by training, referred her to a skin specialist to make the proper diagnosis and treat the rash.
3. Dr. Liu is a/an **(internist, obstetrician, pediatrician)** as well as a/an **(nephrologist, urologist, gynecologist)** and can take care of her female patients before, during, and after their pregnancies.
4. After her sixth pregnancy, Sally developed an abnormal condition at the lower end of her colon. She went to a/an **(gastroenterologist, hematologist, optometrist)**, who made the diagnosis of protrusion of the rectum into the vagina. She then consulted colorectal and gynecologic surgeons to make an appropriate treatment plan for her condition, known as a **(vasculitis, rectocele, colostomy)**.
5. In the cancer clinic, patients often see a medical **(oncologist, orthopedist, rheumatologist)**, who prescribes and monitors chemotherapy, and a/an **(pulmonologist, radiation oncologist, radiologist)**, a physician who prescribes and supervises the use of **(drugs, surgery, radiation)** to treat tumors with high-energy beams.
6. During a lengthy hospitalization, Janet developed a cough and fever (unrelated to any treatment or procedure she received). Her surgeon ordered a chest x-ray, which showed a/an **(oncogenic, nosocomial, iatrogenic)** pneumonia. A/an **(anesthesiologist, neurologist, infectious disease specialist)** was called in to diagnose and treat the hospital-acquired disease condition.
7. Sam had noticed bright red rectal bleeding for several days when he finally saw his family practitioner. This physician referred him to a/an **(endocrinologist, urologist, gastroenterologist)**. A **(laparoscopy, colonoscopy, bronchoscopy)** was scheduled, which revealed a large pedunculated (on a stalk) polyp (benign growth) in the descending colon. See [Figure 5-16](#). The polyp was resected and sent to the **(pathology, hematology, infectious disease)** department for evaluation. Fortunately, it was a noncancerous or **(malignant, metastatic, benign)** lesion. Sam will need follow-up **(laparotomy, endoscopy, laparoscopy)** in a year.

**FIGURE 5-16** Pedunculated polyp in the descending colon. It arises from the mucosal surface of the colon and is projecting into the lumen of the colon. (From Lewis SM, Heitkemper MM, Dirksen SR: *Medical-Surgical Nursing: Assessment and Management of Clinical Problems*, ed 5, St. Louis, 2004, Mosby.)

## PRONUNCIATION OF TERMS

The terms that you have learned in this chapter are presented here with their pronunciations. The capitalized letters in **BOLDFACE** represent the accented syllable. Pronounce each word out loud; then write the meaning in the space provided. Meanings of all terms can be checked with the **Mini-Dictionary** beginning on page 349 and on the audio section of the Evolve website (<http://evolve.elsevier.com/Chabner/medtermshort>).

5

Term	Pronunciation	Meaning
anesthesiology	an-es-the-ze- <b>OL</b> -o-je _____	
cardiologist	kar-de- <b>OL</b> -o-jist _____	
cardiovascular surgeon	kar-de-o- <b>VAS</b> -ku-lar <b>SUR</b> -jun _____	
clinical	<b>KLIN</b> -ih-kal _____

vasculitis	vas-ku- <b>LI</b> -tis _____

## PRACTICAL APPLICATIONS

### ALLIED HEALTH SPECIALISTS

*This section provides three groups of exercises on allied health specialists and their job descriptions. Answers are on page 210. Appendix 5, Health Professions Resource beginning on page 339 lists health professions with education requirements, national association information, and certificate and licensing requirements.*

**A Match each allied health specialist to the appropriate job description. Write your answer on the blank line.**

- |                                  |                                  |
|----------------------------------|----------------------------------|
| • audiologist                    | • dental hygienist               |
| • blood bank technologist        | • diagnostic medical sonographer |
| • chiropractor                   | • dietitian/nutritionist         |
| • clinical laboratory technician | • nurse anesthetist              |
| • dental assistant               | • nurse practitioner             |

1. Treats health problems associated with the muscular, nervous, and skeletal systems, especially the spine \_\_\_\_\_
2. Examines, diagnoses, and treats patients under the direct supervision of a physician \_\_\_\_\_
3. Works with people who have hearing problems by using testing devices to measure hearing loss \_\_\_\_\_
4. Provides preventive dental care and teaches the practice of good oral hygiene \_\_\_\_\_
5. Collects, types, and prepares blood and its components for transfusions \_\_\_\_\_
6. Aids in the delivery of anesthesia during surgery \_\_\_\_\_
7. Assists a dentist with dental procedures \_\_\_\_\_
8. Performs diagnostic ultrasound procedures \_\_\_\_\_
9. Plans nutrition programs and supervises the preparation and serving of meals \_\_\_\_\_
10. Performs tests to examine and analyze body fluids, tissues, and cells \_\_\_\_\_

**B** Select from the list of specialists to match the job description.

- ECG technician
- emergency medical technician/  
paramedic
- health information management  
professional
- home health aide
- licensed practical nurse
- medical assistant
- medical laboratory technician
- nuclear medicine technologist
- nursing aide
- occupational therapist

1. Cares for elderly, disabled, and ill persons in their own homes, helping them live there instead of in an institution \_\_\_\_\_
2. Performs routine tests and laboratory procedures \_\_\_\_\_
3. Designs, manages, and administers the use of health care data and information \_\_\_\_\_
4. Operates an electrocardiograph to record ECGs and for Holter monitoring and stress tests \_\_\_\_\_
5. Performs radioactive tests and procedures under the supervision of a nuclear medicine physician, who interprets the results \_\_\_\_\_
6. Gives immediate care to acutely ill or injured persons and transports them to medical facilities \_\_\_\_\_
7. Helps physicians examine and treat patients and performs tasks to keep offices running smoothly \_\_\_\_\_
8. Cares for the sick, injured, convalescing, and handicapped, under the direct supervision of physicians and registered nurses; provides basic bedside care \_\_\_\_\_
9. Helps individuals with mentally, physically, developmentally, or emotionally disabling conditions to develop, recover, or maintain daily living and working skills \_\_\_\_\_
10. Helps care for physically or mentally ill, injured, or disabled patients confined to nursing, hospital, or residential care facilities; also known as nursing assistants or hospital attendants \_\_\_\_\_

**C Match the specialist to the appropriate job description.**

- ophthalmic medical technician
- phlebotomist
- physical therapist
- physician assistant
- radiation therapist
- radiographer/radiologic technologist
- registered nurse
- respiratory therapist
- speech-language pathologist
- surgical technologist

1. Evaluates, treats, and cares for patients with breathing disorders

\_\_\_\_\_

2. Draws and tests blood under the supervision of a medical technologist or laboratory manager \_\_\_\_\_

3. Cares for sick and injured people by assessing and recording symptoms, assisting physicians during treatments and examinations, and administering medications

\_\_\_\_\_

4. Prepares cancer patients for treatment and administers prescribed doses of ionizing radiation to specific areas of the body \_\_\_\_\_

5. Helps ophthalmologists provide medical eye care \_\_\_\_\_

6. Examines, diagnoses, and treats patients under the direct supervision of a physician \_\_\_\_\_

7. Assists in operations under the supervision of surgeons or registered nurses

\_\_\_\_\_

8. Improves mobility, relieves pain, and prevents or limits permanent physical disabilities in patients with injuries or disease \_\_\_\_\_

9. Produces x-ray images of parts of the body for use in diagnosing medical problems

\_\_\_\_\_

10. Assesses and treats persons with speech, language, voice, and fluency disorders

\_\_\_\_\_

**ANSWERS TO PRACTICAL APPLICATIONS****A**

1. chiropractor
2. nurse practitioner
3. audiologist
4. dental hygienist
5. blood bank technologist
6. nurse anesthetist
7. dental assistant
8. diagnostic medical sonographer
9. dietitian/nutritionist
10. clinical laboratory technician

**B**

1. home health aide
2. medical laboratory technician
3. health information management professional
4. ECG technician
5. nuclear medicine technologist
6. emergency medical technician/paramedic
7. medical assistant
8. licensed practical nurse
9. occupational therapist
10. nursing aide

**C**

1. respiratory therapist
2. phlebotomist
3. registered nurse
4. radiation therapist
5. ophthalmic medical technician
6. physician assistant
7. surgical technologist
8. physical therapist
9. radiographer/radiologic technologist
10. speech-language pathologist

## REVIEW

*Test your understanding of the combining forms and suffixes used in this chapter by completing this review. Remember to check your responses with the Answers to Review on page 212.*

### COMBINING FORMS

Combining Form	Meaning	Combining Form	Meaning
1. aden/o	_____	19. onc/o	_____
2. cardi/o	_____	20. ophthalm/o	_____
3. col/o	_____	21. opt/o, optic/o	_____
4. dermat/o	_____	22. orth/o	_____
5. endocrin/o	_____	23. ot/o	_____
6. enter/o	_____	24. path/o	_____

## TERMINOLOGY CHECKUP

*Give the difference between the following pairs of medical specialists. Write the answers on the lines provided. Confirm your answers and check the box next to each item when you know you've "got" it!*

1. **orthopedist** \_\_\_\_\_

**rheumatologist** \_\_\_\_\_

2. **nephrologist** \_\_\_\_\_

**urologist** \_\_\_\_\_

3. **cardiologist** \_\_\_\_\_

**cardiovascular surgeon** \_\_\_\_\_

4. **pulmonologist** \_\_\_\_\_

**otolaryngologist** \_\_\_\_\_

**thoracic surgeon** \_\_\_\_\_

5. **neurologist** \_\_\_\_\_

**neurosurgeon** \_\_\_\_\_

6. **pathologist** \_\_\_\_\_

**oncologist** \_\_\_\_\_

**hematologist** \_\_\_\_\_

7. **radiologist** \_\_\_\_\_

**radiation oncologist** \_\_\_\_\_

8. **gynecologist** \_\_\_\_\_

**obstetrician** \_\_\_\_\_

9. **physiatrist** \_\_\_\_\_

**psychiatrist** \_\_\_\_\_

## ANSWERS TO TERMINOLOGY CHECKUP

1. An **orthopedist** is a surgeon who diagnoses and treats bone, muscle, and joint conditions, whereas a **rheumatologist** is an internal medicine specialist who primarily diagnoses and treats disorders of joints.
2. A **nephrologist** is an internal medicine specialist who diagnoses and treats disorders of the kidneys, whereas a **urologist** is a surgeon who operates on the kidneys, urinary tract, and male reproductive organs.
3. A **cardiologist** is an internal medicine specialist who diagnoses and treats disorders of the heart, whereas a **cardiovascular surgeon** operates on the heart and blood vessels.
4. A **pulmonologist** is an internal medicine specialist who diagnoses and treats diseases of the lungs, whereas an **otolaryngologist** is a surgeon who operates on the ear, nose, throat, head, and neck. A **thoracic surgeon**, however, operates on organs in the chest, such as the heart, lungs, and esophagus.
5. A **neurologist** is an internal medicine specialist who diagnoses and treats disorders of the brain, spinal cord, and nerves, whereas a **neurosurgeon** operates on the brain, nerves, and spinal cord.
6. A **pathologist** is an internal medicine specialist who examines dead bodies (performs autopsies) and specimens of living cells (biopsies) to determine the correct diagnosis. An **oncologist**, also a specialist in internal medicine, diagnoses and treats malignant tumors. A **hematologist** is a specialist in internal medicine who diagnoses and treats disorders of the blood.
7. A **radiologist** is primarily a diagnostic physician who examines images from x-ray, CT, ultrasound, and MRI studies, whereas a **radiation oncologist** treats malignancies with high-energy radiation (photons and protons).
8. A **gynecologist** is a surgical specialist who treats diseases of the female reproductive system. An **obstetrician** specializes in the treatment of pregnant women and delivery of infants.
9. A **physiatrist** restores function after injury or illness and is also known as a physical medicine and rehabilitation specialist. A **psychiatrist** treats mental disorders.

# Body Systems

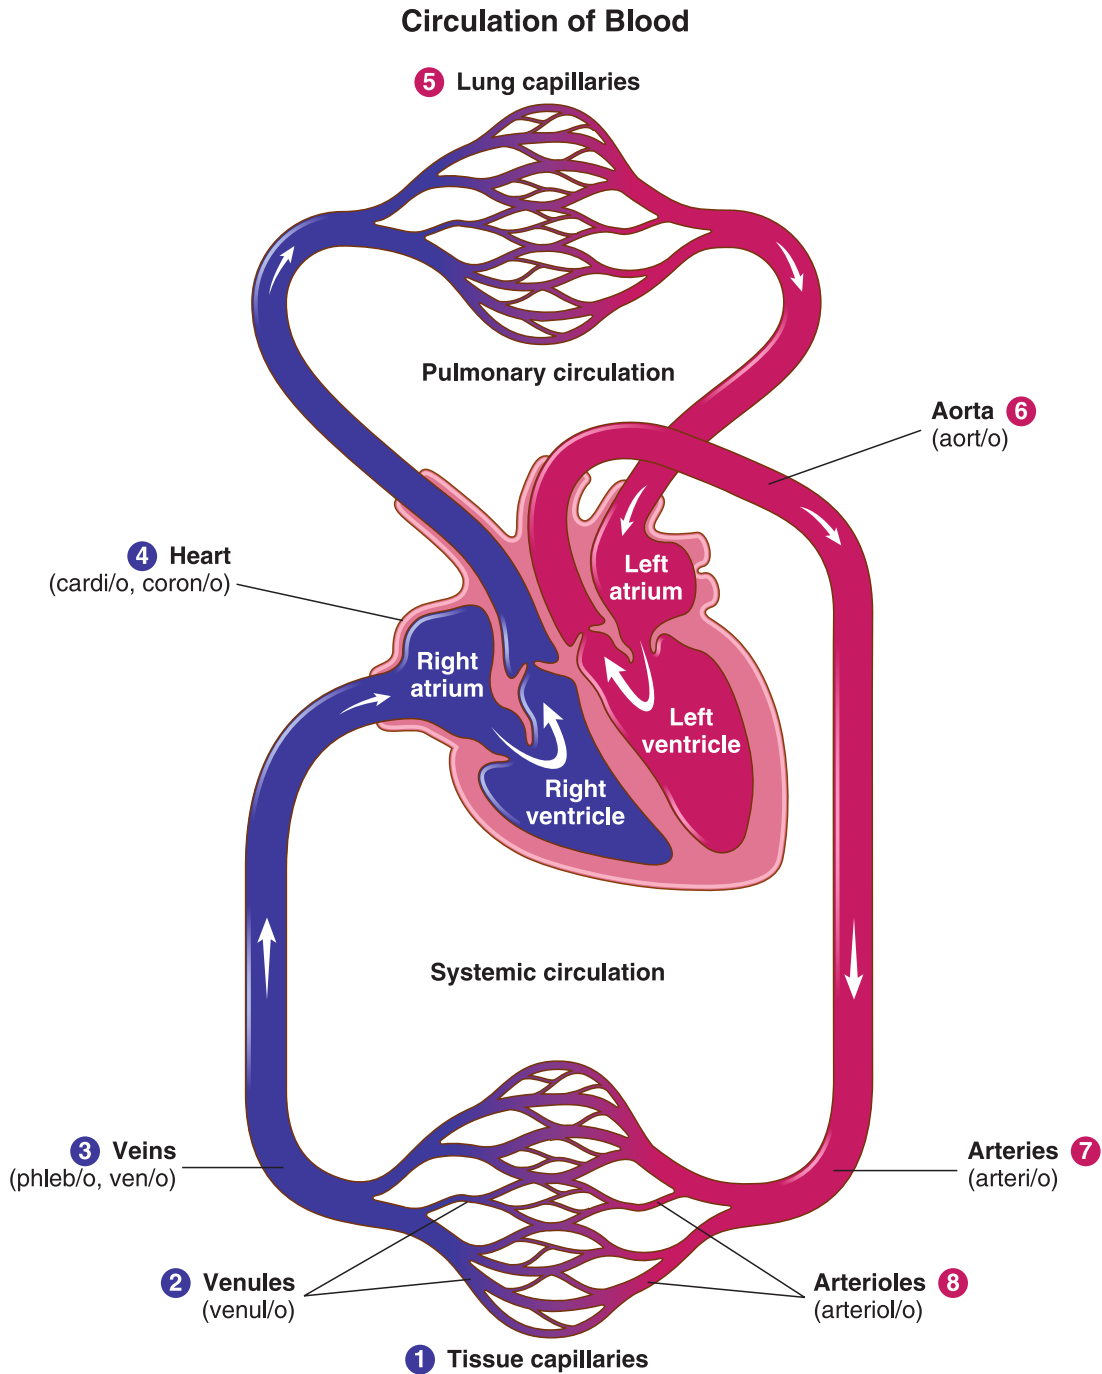

This appendix contains full-color diagrams of body systems. For each system, the material presented is divided into seven sections. **Anatomy** shows major organs and structures with labels and combining forms (in parentheses) for each body part. The parts of the body are defined and explained in the *Mini-Dictionary* (beginning on [page 349](#)). **Terminology** reviews combining forms and their meanings and gives examples of medical terminology using each combining form. **Pathology** explains terms related to common pathological conditions. **Laboratory Tests and Diagnostic Procedures** presents common tests and procedures, which can be cross-referenced for additional information in [Appendix 2, Diagnostic Tests and Procedures](#). **Treatment Procedures** explains therapies that treat abnormal conditions in each system. **Abbreviations** lists selected abbreviations for easy reference. **Matching Exercises** review the terminology to reinforce your understanding; answers to all exercises are provided, beginning on [page 291](#).

Use this appendix both as a study guide for classroom work and as a reference for your work in the medical field.

<b>Cardiovascular System</b> .....	<b>216</b>
<b>Digestive System</b> .....	<b>224</b>
<b>Endocrine System</b> .....	<b>232</b>
<b>Female Reproductive System</b> .....	<b>238</b>
<b>Lymphatic System</b> .....	<b>244</b>
<b>Male Reproductive System</b> .....	<b>248</b>
<b>Musculoskeletal System</b> .....	<b>253</b>
<b>Nervous System</b> .....	<b>263</b>
<b>Respiratory System</b> .....	<b>269</b>
<b>Skin and Sense Organs</b> .....	<b>277</b>
<b>Urinary System</b> .....	<b>285</b>

# CARDIOVASCULAR SYSTEM

## ANATOMY

Red vessels contain blood that is rich in oxygen. Blue vessels contain blood that is oxygen-poor. Arrows show the path of blood flow from the **tissue capillaries 1** through **venules 2** and **veins 3** toward the **heart 4**, to the **lung capillaries 5**, back to the heart, out of the **aorta 6** to the **arteries 7** and **arterioles 8**, and then back to the tissue capillaries.

## TERMINOLOGY

Meanings for terminology are found in the *Mini-Dictionary*, beginning on [page 349](#).

Combining Form	Meaning	Terminology	Meaning
<b>angi/o</b>	vessel	<u>angi</u> plasty _____	
<b>aort/o</b>	aorta	<u>aort</u> ic stenosis _____	
<b>arteri/o</b>	artery	<u>arteri</u> osclerosis _____	
<b>arteriol/o</b>	arteriole	<u>arteriol</u> itis _____	
<b>cardi/o</b>	heart	<u>cardi</u> omyopathy _____ peric <u>ardi</u> um _____	
<b>coron/o</b>	heart	<u>coron</u> ary arteries _____	
<b>phleb/o</b>	vein	<u>phleb</u> otomy _____	
<b>ven/o</b>	vein	intra <u>ven</u> ous _____	
<b>venul/o</b>	venule	<u>venul</u> itis _____	

## PATHOLOGY

Definitions for additional terms in **boldface** are found in the *Mini-Dictionary*.

**Aneurysm:** Local widening of an artery caused by weakness in the arterial wall or breakdown of the wall from **atherosclerosis**.

**Angina:** Chest pain caused by decreased blood flow to heart muscle. Also called angina pectoris (PECT/O means chest).

**Arrhythmia:** Abnormal heartbeat (rhythm); **fibrillation** and **flutter** are examples.

**Atherosclerosis:** Hardening of arteries with a collection of cholesterol-like plaque.

**Congestive heart failure:** Inability of the heart to pump its required amount of blood. Blood accumulates in the lungs, causing **pulmonary edema**.

**Hypertension:** High blood pressure. Essential hypertension is high blood pressure with no apparent cause. In secondary hypertension, another illness (kidney disease or an adrenal gland disorder) is the cause of the high blood pressure.

**Myocardial infarction:** Heart attack. An **infarct** is an area of dead (**necrotic**) tissue.

**Shock:** A group of signs and symptoms (paleness of skin, weak and rapid pulse, shallow breathing) indicating poor oxygen supply to tissues and insufficient return of blood to the heart.

## LABORATORY TESTS AND DIAGNOSTIC PROCEDURES

Consult *Appendix 2*, beginning on [page 295](#), for pronunciation of terms and additional information.

**Angiography:** Recording (via x-ray images) blood vessels after the injection of contrast into the bloodstream.

**Cardiac catheterization:** Introducing a catheter (flexible, tubular instrument) into a coronary blood vessels to measure pressure and flow patterns of blood.

**Cardiac enzyme tests:** Measurements of enzymes released into the bloodstream after a heart attack (myocardial infarction).

**Doppler ultrasound:** Measuring blood flow in vessels via sound waves.

**Echocardiography:** Images of the heart are produced using sound waves.

**Electrocardiography:** Recording electricity flowing through the heart.

**Holter monitoring:** Detection of abnormal heart rhythms (**arrhythmias**) that involves having a patient wear a compact version of an electrocardiograph for 24 hours.

**Lipid tests:** Measurements of cholesterol and triglyceride levels in the blood.

**Lipoprotein tests:** Measurements of **high-density lipoprotein (HDL)** and **low-density lipoprotein (LDL)** in the blood.

**Magnetic resonance imaging (MRI):** Producing an image, by beaming magnetic waves at the heart, that gives detailed information about congenital heart disease, cardiac masses, and disease within large blood vessels.

**MUGA scan:** Imaging the motion of heart wall muscles and assessing the function of the heart via a multiple-gated acquisition scan, which uses radioactive chemicals.

**Positron emission tomography (PET) scan:** Radioactive chemicals, which release radioactive particles, are injected into the bloodstream and travel to the heart. Cross-sectional images show the flow of blood and the functional activity of the heart muscle.

**Stress test:** An electrocardiogram plus blood pressure and heart rate measurements shows the heart's response to physical exertion (treadmill test).

**Technetium Tc 99m sestamibi scan:** A radioactive pharmaceutical (sestamibi “tagged” with technetium-99m) is injected intravenously to show perfusion (flow) of blood in heart muscle. It is taken up in the area of a myocardial infarction, producing “hot spots.” In an ETT-MIBI exercise tolerance test, an intravenous radioactive substance is given before the patient reaches maximal heart rate on a treadmill.

**Thallium-201 scan:** A radioactive test that shows where injected thallium-201 (a radioactive substance) localizes in heart muscle.

## TREATMENT PROCEDURES

**Cardiac catheter ablation:** Flexible tube is threaded through blood vessels into the heart to destroy (ablate) abnormal tissue that causes arrhythmias.

**Cardioversion:** Brief discharges of electricity passing across the chest to stop a cardiac **arrhythmia**. Also called **defibrillation**.

**Coronary artery bypass grafting (CABG):** Vessels taken from the patient's legs or chest are connected to coronary arteries to make detours around blockages.

**Endarterectomy:** Surgical removal of the innermost lining of an artery to remove fatty deposits and clots.

**Heart transplantation:** A donor heart is transferred to a recipient.

**Percutaneous coronary intervention (PCI):** A balloon-tipped catheter (a flexible, tubular instrument) is threaded into a coronary artery to compress fatty deposits and open the artery. **Stents** (expandable slotted tubes) create wider openings that make the recurrence of blockages less likely. Also called **balloon angioplasty**.

**Thrombolytic therapy:** Drugs such as tPA (tissue plasminogen activator) and streptokinase are injected into a patient's bloodstream to dissolve clots that may cause a heart attack.

## ABBREVIATIONS

See [Appendix 3](#), beginning on [page 317](#), for a more complete list of medical abbreviations.

<b>ACS</b>	Acute coronary syndrome (disease changes in coronary arteries leading to plaque/clot formation and heart attack or other heart problems)
<b>AED</b>	Automated external defibrillator (electronic device that can diagnose and treat serious arrhythmias)
<b>AMI</b>	Acute myocardial infarction (heart attack)
<b>BP</b>	Blood pressure
<b>CABG</b>	Coronary artery bypass grafting (surgical placement of vessels, either vein or artery, to detour blocked coronary arteries)
<b>CAD</b>	Coronary artery disease
<b>CCU</b>	Coronary care unit
<b>CHF</b>	Congestive heart failure (heart is unable to pump its required amount of blood)
<b>CPR</b>	Cardiopulmonary resuscitation
<b>ECG</b>	Electrocardiography
<b>ECHO or Echo</b>	Echocardiography
<b>HDL</b>	High-density lipoprotein
<b>HTN</b>	Hypertension (high blood pressure)
<b>ICD</b>	Implantable cardioverter-defibrillator
<b>LDL</b>	Low-density lipoprotein (combination of fat and protein; high cholesterol content and associated with formation of plaque in arteries)
<b>PCI</b>	Percutaneous coronary intervention (placement of a catheter and stent in a coronary artery to open the artery; balloon angioplasty)

## MATCHING EXERCISES

The following exercises will help you review terminology related to the cardiovascular system. Answers begin on [page 291](#).

- A** Match the term in Column I with its meaning in Column II. These terms are illustrated in the diagram on [page 216](#) and are defined in the *Mini-Dictionary*, beginning on [page 349](#).

Column I	Column II
1. aorta _____	A. Blood vessels that carry blood to the heart from the body tissues
2. lung capillaries _____	B. Largest artery in the body
3. arteries _____	C. Tiny blood vessels that lie near cells and through whose walls gases, food, and wastes can pass
4. arterioles _____	D. Small veins
5. venules _____	E. Small arteries
6. veins _____	F. Blood vessels that carry blood away from the heart
7. pulmonary circulation _____	G. Passage of blood from the heart to the body tissues and back
8. systemic circulation _____	H. Hollow muscular organ that pumps blood all over the body
9. tissue capillaries _____	I. Tiny blood vessels surrounding lung tissue through which gases pass into and out of the blood
10. heart _____	J. Passage of blood from the heart to the lungs and back to the heart

**B Match the combining form in Column I with its meaning in Column II.**

Column I	Column II
1. phleb/o _____	A. Artery
2. arteriol/o _____	B. Vessel
3. angi/o _____	C. Heart
4. venul/o _____	D. Vein
5. arteri/o _____	E. Small artery
6. coron/o _____	F. Small vein

**C Match the medical term in Column I with its meaning in Column II.**

Column I	Column II
1. intravenous _____	A. Inflammation of small veins
2. arteriosclerosis _____	B. Narrowing of the largest artery
3. phlebotomy _____	C. Disease of heart muscle
4. cardiomyopathy _____	D. Pertaining to within a vein
5. angioplasty _____	E. Inflammation of small arteries
6. arteriolitis _____	F. Hardening of arteries
7. venulitis _____	G. Incision of a vein
8. aortic stenosis _____	H. Surgical repair of blood vessels
9. pericardium _____	I. Pertaining to the heart
10. coronary _____	J. Membrane surrounding the heart

**D Match the pathologic condition in Column I with its meaning in Column II.**

Column I	Column II
1. hypertension _____	A. Abnormal heartbeat
2. atherosclerosis _____	B. Local widening of an artery
3. angina _____	C. Heart attack
4. shock _____	D. Chest pain
5. myocardial infarction _____	E. High blood pressure
6. arrhythmia _____	F. Inability of the heart to pump its required amount of blood
7. congestive heart failure _____	G. Group of signs and symptoms: pale skin, weak rapid pulse, and shallow respirations
8. aneurysm _____	H. Hardening of arteries with cholesterol-like plaque

**E Match the test or procedure in Column I with its description in Column II.**

Column I	Column II
1. lipid tests _____	A. Sound waves produce images of the heart
2. MUGA scan _____	B. X-ray images of blood vessels after contrast is injected into the bloodstream
3. lipoprotein tests _____	C. Measurement of HDL and LDL in blood
4. Holter monitoring _____	D. Recording electricity through the heart
5. angiography _____	E. Measurement of substances in the blood that indicate a heart attack
6. cardiac enzyme test _____	F. Sound waves measure blood flow in vessels
7. electrocardiography _____	G. Abnormal heart rhythms are detected with a compact ECG over a 24-hour period
8. echocardiography _____	H. Radioactive test to detect blood perfusion in heart muscle
9. sestamibi scan _____	I. Measurement of triglyceride and cholesterol levels in the blood
10. Doppler ultrasound _____	J. Radioactive chemicals and a scanner produce images of the motion of the heart wall

**F Match the treatment procedure in Column I with its description in Column II.**

Column I	Column II
1. cardioversion _____	A. Surgery to detour around blockages in coronary arteries
2. thrombolytic therapy _____	B. Drugs such as tPA dissolve clots that may cause a heart attack
3. heart transplantation _____	C. Balloon-tipped catheter with stent opens coronary arteries
4. endarterectomy _____	D. Flexible tube is threaded into the heart; abnormal tissue is destroyed
5. CABG _____	E. Brief discharges of electricity stop a cardiac arrhythmia
6. PCI _____	F. Removal of innermost lining of an artery to eliminate fatty deposits
7. cardiac catheter ablation _____	G. Donor heart is transferred to a recipient

# DIGESTIVE SYSTEM

## ANATOMY

Food enters the body via the mouth and travels through the **pharynx**, **esophagus**, and **stomach** to the small intestine (**duodenum**). The **liver**, **gallbladder**, and **pancreas** make and store chemicals that aid in the digestion of foods. Digested (broken-down) food is absorbed into the bloodstream through the walls of the small intestine (**jejunum** and **ileum**). Any substance that cannot be absorbed continues into the **colon** (large intestine) and leaves the body through the **rectum** and **anus**.  
(Modified from Chabner D-E: The Language of Medicine, ed 11, St. Louis, 2017, Elsevier.)

## TERMINOLOGY

Meanings for terminology are found in the *Mini-Dictionary*.

Combining Form	Meaning	Terminology	Meaning
<b>an/o</b>	anus	<u>anal</u> _____	
<b>append/o</b>	appendix	<u>appendectomy</u> _____	
<b>appendic/o</b>	appendix	<u>appendicitis</u> _____	
<b>cholecyst/o</b>	gallbladder	<u>cholecystectomy</u> _____	
<b>col/o</b>	colon	<u>colostomy</u> _____	
<b>colon/o</b>	colon	<u>colonoscopy</u> _____	
<b>duoden/o</b>	duodenum	<u>duodenal</u> _____	
<b>esophag/o</b>	esophagus	<u>esophageal</u> _____	
<b>gastr/o</b>	stomach	<u>gastralgia</u> _____	
<b>hepat/o</b>	liver	<u>hepatomegaly</u> _____	
<b>ile/o</b>	ileum	<u>ileostomy</u> _____	
<b>jejun/o</b>	jejunum	<u>gastrojejunostomy</u> _____	
<b>or/o</b>	mouth	<u>oral</u> _____	
<b>pancreat/o</b>	pancreas	<u>pancreatitis</u> _____	
<b>pharyng/o</b>	pharynx	<u>pharyngeal</u> _____	
<b>proct/o</b>	anus and rectum	<u>proctoscopy</u> _____	
<b>rect/o</b>	rectum	<u>rectocele</u> _____	
<b>sigmoid/o</b>	sigmoid colon	<u>sigmoidoscopy</u> _____	
<b>stomat/o</b>	mouth	<u>stomatitis</u> _____	

## PATHOLOGY

Definitions for additional terms in **boldface** are found in the *Mini-Dictionary*.

**Cholelithiasis:** Abnormal condition of gallstones.

**Cirrhosis:** Chronic disease of the liver with degeneration of liver cells.

**Colonic polyposis:** Condition in which **polyps** protrude from the mucous membrane lining the colon.

**Diverticulosis:** Abnormal condition of small pouches or sacs (**diverticula**) in the wall of the intestine (often the colon). **Diverticulitis** is inflammation and infection within diverticula.

**Gastroesophageal reflux disease (GERD):** A condition in which contents of the stomach flow back into the esophagus.

**Hepatitis:** Inflammation of the liver.

**Inflammatory bowel disease (IBD):** Inflammation of the terminal (last) portion of the ileum (**Crohn disease**) or inflammation of the colon (**ulcerative colitis**).

**Irritable bowel syndrome (IBS):** Signs and symptoms are cramping, abdominal bloating, constipation, and diarrhea. Although IBS causes distressing symptoms, it does not permanently harm the intestine. Its cause is unknown.

**Hepatocellular carcinoma:** Cancer (primary) of the liver.

**Jaundice:** Yellow-orange coloration of the skin and other tissues, from high levels of **bilirubin** in the bloodstream (**hyperbilirubinemia**).

## LABORATORY TESTS AND DIAGNOSTIC PROCEDURES

Consult [Appendix 2](#) for pronunciation of terms and additional information.

**Abdominal computed tomography (CT) scan:** A series of cross-sectional x-ray images that show abdominal organs.

**Abdominal magnetic resonance imaging (MRI):** Magnetic and radio waves create images of abdominal organs and tissues in all three planes of the body.

**Abdominal ultrasonography:** Process of beaming sound waves into the abdomen to produce images of organs, such as the gallbladder. **Endoscopic ultrasonography** is useful to detect enlarged lymph nodes and tumors in the upper abdomen.

**Barium tests:** X-ray examinations using a liquid barium mixture to locate disorders of the gastrointestinal tract. In a **barium enema (lower GI series)**, barium is injected into the anus and rectum, and x-ray images are taken of the colon. In an **upper GI series (barium swallow)**, barium is taken in through the mouth, and x-ray images reveal the esophagus, stomach, and small intestine.

**Cholangiography:** X-ray examination of the bile ducts (CHOLANGI/O-) after the injection of contrast material through the liver (**percutaneous transhepatic cholangiography**) or through a catheter (a flexible, tubular instrument) from the mouth, esophagus, and stomach into the bile ducts (**endoscopic retrograde cholangiopancreatography**, or **ERCP**).

**Gastrointestinal endoscopy:** Visual examination of the gastrointestinal tract with an endoscope. Examples are **esophagoscopy**, **gastroscopy**, **colonoscopy**, and **sigmoidoscopy**.

**Hemoccult test:** Feces are placed on paper containing the chemical guaiac, which reacts with hidden (occult) blood. This is an important screening test for colon cancer.

**Laparoscopy:** Visual examination of the abdominal cavity through an endoscope inserted in the abdomen.

**Liver function tests (LFTs):** Measurements of liver enzymes and other substances in the blood. Enzyme levels increase when the liver is damaged (as in hepatitis). Examples of liver enzymes are **ALT, AST,** and **alkaline phosphatase (alk phos).** High **bilirubin** (blood pigment) levels indicate **jaundice** caused by liver disease or other problems affecting the liver.

**Stool culture:** Feces (stools) are placed in a growth medium (culture) to test for microorganisms (such as bacteria).

**Virtual colonoscopy:** CT scans, MRI, and computers are used to produce two- and three-dimensional images of the colon. Also called **CT colonography.**

## TREATMENT PROCEDURES

**Anastomosis:** Surgical creation of an opening between two gastrointestinal organs. Examples are gastrojejunostomy, cholecystojejunostomy, and choledochoduodenostomy (CHOLEDOCH/O means common bile duct).

**Colostomy:** Surgical creation of a new opening of the colon to the outside of the body.

**Ileostomy:** Surgical creation of a new opening of the ileum to the outside of the body.

**Laparoscopic surgery:** Removal of organs or tissues via a laparoscope (instrument inserted into the abdomen through a small incision). Examples are **laparoscopic cholecystectomy** and **laparoscopic appendectomy,** which are types of **minimally invasive surgery or keyhole surgery.**

## ABBREVIATIONS

<b>ALT, AST</b>	Alanine transaminase and aspartate transaminase (liver enzymes measured as part of LFTs)
<b>BE</b>	Barium enema (barium, a contrast agent, is introduced through the rectum, and x-ray pictures of the colon are taken)
<b>ERCP</b>	Endoscopic retrograde cholangiopancreatography
<b>GB</b>	Gallbladder
<b>GERD</b>	Gastroesophageal reflux disease
<b>GI</b>	Gastrointestinal
<b>IBD</b>	Inflammatory bowel disease (Crohn disease and ulcerative colitis)
<b>IBS</b>	Irritable bowel syndrome
<b>LFTs</b>	Liver function tests (ALT, AST, bilirubin)
<b>NPO</b>	Nothing by mouth (Latin, <i>nil per os</i> )
<b>TPN</b>	Total parenteral nutrition (intravenous solutions are given to maintain nutrition)

## MATCHING EXERCISES

The following exercises will help you review terminology related to the digestive system. Answers begin on [page 291](#).

### A Match the term in Column I with its description in Column II.

Column I	Column II
1. mouth _____	A. Organ that receives food from the esophagus and sends it to the intestine
2. pharynx _____	B. Third part of the small intestine
3. esophagus _____	C. Throat
4. stomach _____	D. Second part of the small intestine
5. duodenum _____	E. Large intestine
6. jejunum _____	F. First part of the small intestine
7. ileum _____	G. Opening that is the beginning of the digestive system
8. colon _____	H. Tube that carries food to the stomach

### B Match the term in Column I with its description in Column II.

Column I	Column II
1. sigmoid colon _____	A. Opening of the colon to the outside of the body
2. rectum _____	B. Sac that stores bile
3. anus _____	C. S-shaped lower portion of the large intestine
4. appendix _____	D. Organ that makes bile, stores sugar, and produces proteins to clot blood
5. liver _____	E. Gland that makes both digestive juices and insulin (hormone)
6. gallbladder _____	F. Small sac that hangs from the beginning of the large intestine
7. common bile duct _____	G. Tube that carries bile from the liver and gallbladder to the intestine
8. pancreas _____	H. Final section of the colon

**C Match the combining form in Column I with its meaning in Column II.**

Column I	Column II
1. gastr/o _____	A. Mouth
2. col/o _____	B. Endocrine and exocrine gland near the stomach
3. proct/o _____	C. Third part of the small intestine
4. cholecyst/o _____	D. Stomach
5. pharyng/o _____	E. Liver
6. or/o _____	F. First part of the small intestine
7. hepat/o _____	G. Large intestine
8. duoden/o _____	H. Anus and rectum
9. ile/o _____	I. Gallbladder
10. pancreat/o _____	J. Throat

**D Match the term in Column I with its meaning in Column II.**

Column I	Column II
1. hepatomegaly _____	A. Pertaining to the tube leading from the throat to the stomach
2. cholecystectomy _____	B. Pain of the stomach
3. proctoscopy _____	C. Enlargement of the liver
4. ileostomy _____	D. Inflammation of the mouth
5. stomatitis _____	E. Pertaining to the first part of the small intestine
6. gastrojejunostomy _____	F. Removal of the gallbladder
7. pancreatitis _____	G. Visual examination of the anus and rectum
8. duodenal _____	H. New opening of the third part of the small intestine to the outside of the body
9. esophageal _____	I. New opening between the stomach and second part of the small intestine
10. gastralgia _____	J. Inflammation of a gland adjacent to the stomach

**E Match the pathologic condition in Column I with its meaning in Column II.**

Column I		Column II
1. hepatitis	_____	A. Yellow-orange coloration of the skin and other tissues
2. cirrhosis	_____	B. Abnormal condition of small pouches or sacs in the wall of the intestine
3. cholelithiasis	_____	C. Ulcerative colitis and Crohn disease
4. colonic polyposis	_____	D. Inflammation of the liver
5. jaundice	_____	E. Abnormal condition of gallstones
6. inflammatory bowel disease	_____	F. Chronic disease of the liver with degeneration of liver cells
7. diverticulosis	_____	G. Small growths protrude from the mucous membrane lining the intestine
8. irritable bowel syndrome	_____	H. Contents of the stomach flow backwards into the esophagus
9. hepatocellular carcinoma	_____	I. Signs and symptoms of GI distress, but no lesions found in the GI tract
10. gastroesophageal reflux disease	_____	J. Primary cancer of the liver

**F** Match the test or procedure in Column I with its description in Column II.

Column I	Column II
1. LFTs _____	A. X-ray examination of bile ducts
2. abdominal CT _____	B. Minimally invasive surgery of the abdomen
3. cholangiography _____	C. Visual examination of the gastrointestinal tract (colonoscopy)
4. stool culture _____	D. Feces are placed in a growth medium and tested for microorganisms
5. GI endoscopy _____	E. Cholecystojejunostomy
6. hemocult test _____	F. Magnetic waves create images of abdominal organs in three planes of the body
7. barium tests _____	G. Measurements of liver enzymes (ALT, AST, alk phos) and other substances
8. abdominal MRI _____	H. Feces are tested for blood; stool guaiac test
9. anastomosis _____	I. Series of cross-sectional x-ray images show abdominal organs
10. laparoscopic surgery _____	J. X-ray images of the GI tract obtained after introduction of a radiopaque liquid into the rectum or mouth

# ENDOCRINE SYSTEM

## ANATOMY

Endocrine glands secrete (form and give off) hormones into the bloodstream. The hormones travel throughout the body, affecting organs (including other endocrine glands) and controlling their actions. (Modified from Chabner D-E: *The Language of Medicine*, ed 11, St. Louis, 2017, Elsevier.)

## TERMINOLOGY

Meanings for terminology are found in the *Mini-Dictionary*.

Combining Form	Meaning	Terminology
<b>adren/o</b>	adrenal gland	<u>adrenopathy</u> _____
<b>adrenal/o</b>	adrenal gland	<u>adrenalectomy</u> _____
<b>hypophys/o</b>	pituitary gland	<u>hypophyseal</u> _____
<b>oophor/o</b>	ovary	<u>oophoritis</u> _____
<b>ovari/o</b>	ovary	<u>ovarian cyst</u> _____
<b>orch/o</b>	testis	<u>orchitis</u> _____
<b>orchi/o</b>	testis; testicle	<u>orchiopexy</u> _____
<b>orchid/o</b>	testis; testicle	<u>orchidectomy</u> _____
<b>pancreat/o</b>	pancreas	<u>pancreatectomy</u> _____
<b>parathyroid/o</b>	parathyroid gland	<u>hyperparathyroidism</u> _____
<b>pituitary/o</b>	pituitary gland	<u>hypopituitarism</u> _____
<b>thyroaden/o</b>	thyroid gland	<u>thyroadenitis</u> _____
<b>thyroid/o</b>	thyroid gland	<u>thyroidectomy</u> _____

## PATHOLOGY

Definitions for additional terms in **boldface** are found in the *Mini-Dictionary*.

**Acromegaly:** Enlargement of extremities caused by hypersecretion from the anterior portion of the pituitary gland after puberty.

**Cushing syndrome:** Group of clinical features produced by excess secretion of **cortisol** from the adrenal cortex. These signs and symptoms include obesity, moon-like facies (fullness of the face), **hyperglycemia**, and **osteoporosis**.

**Diabetes mellitus:** Disorder of the pancreas that causes an increase in blood glucose levels (hyperglycemia). **Type 1 diabetes**, with onset usually in childhood, involves complete deficiency of **insulin** in the body. **Type 2 diabetes**, with onset usually in adulthood, involves some insulin deficiency and resistance of tissues to the action of insulin.

**Goiter:** Enlargement of the thyroid gland.

**Hyperthyroidism:** Overactivity of the thyroid gland; also called **Graves disease** or **exophthalmic** (eyeballs bulge outward) **goiter**.

## LABORATORY TESTS AND DIAGNOSTIC PROCEDURES

Consult [Appendix 2](#) for pronunciation of terms and additional information.

**Computed tomography (CT scan):** Cross-sectional x-ray images of the pituitary gland and other endocrine organs.

**Exophthalmometry:** Measurement of eyeball protrusion (**exophthalmos**) as an indicator of **Graves disease (hyperthyroidism)**.

**Fasting blood sugar (glucose) test:** Measurement of glucose levels in a blood sample taken from a fasting patient and in specimens taken 30 minutes, 1 hour, 2 hours, and 3 hours after the ingestion of 75 g of glucose. Delayed return of blood glucose to normal levels indicates **diabetes mellitus**.

**Magnetic resonance imaging (MRI):** Magnetic waves produce images of the **hypothalamus**, pituitary gland, and other endocrine organs in all three planes of the body.

**Radioactive iodine uptake:** Measurement of how much of a radioactive element (iodine) is absorbed by the thyroid gland. The radioactive iodine is given by mouth and measured as evidence of thyroid function.

**Serum and urine tests:** Measurement of hormones, **electrolytes** (such as sodium and potassium), and glucose levels in blood (serum) and urine as indicators of endocrine function.

**Thyroid function tests:** Measurement of levels of T4 (thyroxine), T3 (triiodothyronine), and TSH (thyroid-stimulating hormone) in the bloodstream.

**Thyroid scan:** Procedure in which a radioactive compound, injected intravenously, localizes in the thyroid gland. A scanning device produces an image showing the presence of tumors or nodules in the gland.

## ABBREVIATIONS

<b>ACTH</b>	Adrenocorticotrophic hormone (from the pituitary gland)
<b>DM</b>	Diabetes mellitus
<b>GH</b>	Growth hormone (secreted by the pituitary gland)
<b>GTT</b>	Glucose tolerance test (measures the ability to respond to a glucose load; test for diabetes mellitus)
<b>HbA1c</b>	Hemoglobin A1c measures the average amount of glucose in red blood cells. Useful to follow control of glucose in diabetic patients.
<b>K<sup>+</sup></b>	Potassium (an electrolyte)
<b>Na<sup>+</sup></b>	Sodium (an electrolyte)
<b>RAIU</b>	Radioactive iodine uptake (test for thyroid function)
<b>T3</b>	Triiodothyronine (hormone from the thyroid gland)
<b>T4</b>	Thyroxine (hormone from the thyroid gland)
<b>TSH</b>	Thyroid-stimulating hormone (from the pituitary gland)

## MATCHING EXERCISES

The following exercises will help you review terminology related to the endocrine system. Answers begin on [page 291](#).

**A** Match the term in Column I with its location in Column II.

Column I		Column II
1. thyroid gland	_____	A. Two paired male glands located in the scrotal sac
2. ovaries	_____	B. Organ at the base of the brain in the sella turcica (round depression at the base of the skull)
3. testes	_____	C. Gland in the neck on either side of the trachea
4. parathyroid glands	_____	D. Two glands, one above each kidney
5. pituitary gland	_____	E. Gland adjacent to the stomach
6. pancreas	_____	F. Four glands behind the thyroid gland
7. adrenal glands	_____	G. Two paired organs in the female abdomen

**B Match the combining form in Column I with the secretion or function in Column II.**

Column I	Column II
1. hypophys/o _____	A. Regulates calcium in the blood and bones
2. orchid/o _____	B. Secretes epinephrine (adrenaline) and cortisol
3. oophor/o _____	C. Secretes insulin, which allows sugar to enter cells
4. thyroaden/o _____	D. Secretes testosterone
5. pancreat/o _____	E. Secretes growth hormone and hormones that control the thyroid gland, ovaries, and testes
6. adren/o _____	F. Secretes estrogen and progesterone
7. parathyroid/o _____	G. Secretes thyroxine (T4), which increases metabolism of body cells

**C Match the medical term in Column I with its meaning in Column II.**

Column I	Column II
1. thyroidenitis _____	A. Disease of the adrenal glands
2. oophoritis _____	B. Pertaining to the pituitary gland
3. orchiopexy _____	C. Inflammation of the thyroid gland
4. hyperparathyroidism _____	D. Removal of the thyroid gland
5. thyroidectomy _____	E. Surgical fixation of an undescended testicle
6. adrenopathy _____	F. Increased secretion of parathyroid hormone
7. hypophyseal _____	G. Inflammation of an ovary

**D Match the pathologic condition in Column I with its description in Column II.**

Column I	Column II
1. diabetes mellitus _____	A. Enlargement of the thyroid gland
2. acromegaly _____	B. Hypersecretion of cortisone from the adrenal glands
3. goiter _____	C. Deficiency of insulin leading to high blood sugar levels
4. Cushing syndrome _____	D. Enlargement of extremities caused by increased growth hormone from the pituitary gland
5. hyperthyroidism _____	E. Overactivity of the thyroid gland

**E Match the test or procedure in Column I with its description in Column II.**

Column I	Column II
1. thyroid scan _____	A. Measures blood glucose levels
2. exophthalmometry _____	B. Radioactive compound, injected intravenously, localizes in the thyroid gland; images are produced
3. fasting blood sugar _____	C. Measures hormones, electrolytes, and sugar in blood and urine
4. thyroid function testing _____	D. Measures localization of an element necessary for making thyroid hormone
5. CT scan _____	E. Measures eyeball protrusion
6. serum and urine testing _____	F. Cross-sectional x-ray images of endocrine organs
7. radioactive iodine uptake _____	G. Measures T3, T4, and TSH levels in the blood

## FEMALE REPRODUCTIVE SYSTEM

### ANATOMY

An egg cell (**ovum**) is produced in the **ovary** and travels through the **fallopian tube**. If a sperm cell is present and fertilization (the union of the egg and sperm cell) takes place, the resulting cell (embryo) may implant in the lining of the **uterus**. The embryo (later called the fetus) develops in the uterus for nine months and is delivered from the body through the **cervix** and **vagina**. (Modified from Chabner D-E: *The Language of Medicine*, ed 11, St. Louis, 2017, Elsevier.)

The **breast** contains glandular tissue that produces milk after delivery of an infant. The **areola** is the dark-pigmented area surrounding the **mammary papilla** (breast nipple). There are numerous **lymph nodes** around the breast and in the underarm (axilla). (Modified from Chabner D-E: *The Language of Medicine*, ed 11, St. Louis, 2017, Elsevier.)

## TERMINOLOGY

Meanings for terminology are found in the *Mini-Dictionary*.

Combining Form	Meaning	Terminology	Meaning
<b>cervic/o</b>	cervix	<u>cervical</u> _____	
<b>colp/o</b>	vagina	<u>colposcopy</u> _____	
<b>vagin/o</b>	vagina	<u>vaginitis</u> _____	
<b>hyster/o</b>	uterus	<u>hysterectomy</u> _____	
<b>mamm/o</b>	breast	<u>mammogram</u> _____	
<b>mast/o</b>	breast	<u>mastectomy</u> _____	
<b>metri/o</b>	uterus	<u>endometrium</u> _____	
<b>uter/o</b>	uterus	<u>uterine</u> _____	
<b>o/o</b>	egg	<u>oocyte</u> _____	
<b>oophor/o</b>	ovary	<u>oophorectomy</u> _____	
<b>ovari/o</b>	ovary	<u>ovarian cancer</u> _____	
<b>salping/o</b>	fallopian tube	<u>salpingectomy</u> _____	

## PATHOLOGY

Definitions for additional terms in **boldface** are found in the *Mini-Dictionary*.

**Amenorrhea:** Absence of menstrual flow.

**Dysmenorrhea:** Painful menstrual flow.

**Ectopic pregnancy:** Pregnancy (gestation) that is not in the uterus; usually occurs in a fallopian tube.

**Endometriosis:** Tissue from the inner lining of the uterus (**endometrium**) is found abnormally in other pelvic or abdominal locations (**fallopian tubes, ovaries, or peritoneum**).

**Fibroids:** Benign tumors in the uterus. Also called a **leiomyoma**; LEI/O means smooth (referring to **visceral muscle** within an internal organ).

**Menorrhagia:** Excessive discharge of blood (-RRHAGIA) from the uterus during menstruation.

**Pelvic inflammatory disease:** Inflammation (often caused by bacterial infection) in the region of the pelvis. Because the condition primarily affects the fallopian tubes, it is also called **salpingitis**.

## LABORATORY TESTS AND DIAGNOSTIC PROCEDURES

Consult [Appendix 2](#) for pronunciation of terms and additional information.

**Amniocentesis:** Surgical puncture of the amnion (sac surrounding the developing fetus).

**Aspiration:** Withdrawal of fluid from a cavity or sac. In breast aspiration, a needle is used to remove fluid from cystic lesions in the breast. The fluid is analyzed for the presence of malignant cells.

**Colposcopy:** Visual examination of the vagina and cervix with a colposcope (a small, magnifying instrument resembling a mounted pair of binoculars).

**Conization:** Removal of a wedged-shaped section (cone) of the cervix for **biopsy**.

**Hysterosalpingography:** X-ray imaging of the uterus and fallopian tubes after injection of a contrast agent into the uterus.

**Mammography:** X-ray imaging (recording) of the breast.

**Pap smear:** Insertion of an instrument (spatula) into the vagina to obtain a sample of cells from the cervix (neck of the uterus). Microscopic analysis of the smear indicates the presence of cervical cancer.

**Pelvic ultrasonography:** Recording (imaging) of sound waves as they impact organs in the region of the hip. In transvaginal ultrasound, a sound probe is placed in the vagina.

**Pregnancy test:** Measurement of human chorionic gonadotropin (HCG), a hormone in blood and urine that indicates pregnancy.

## TREATMENT PROCEDURES

**Cauterization:** Heat is used to destroy abnormal tissue, for example, in the lining of the **cervix** (lower neck-like region of the uterus).

**Cryosurgery:** Use of cold temperatures (often liquid nitrogen) to freeze and destroy tissue (such as the lining of the cervix).

**Dilation and curettage (D&C):** Widening (dilation or dilatation) of the opening of the cervix and scraping (curettage) of the lining of the uterus to remove tissue and stop prolonged or heavy uterine bleeding.

**Hysterectomy:** Excision of the uterus either through the abdominal wall (abdominal hysterectomy) or through the vagina (vaginal hysterectomy)

**Myomectomy:** The surgical removal of **fibroid (myoma)** tissue from the uterus.

**Uterine artery embolization** may be used instead to shrink the fibroids. Tiny pellets are injected into the uterine artery. The pellets act as emboli to block blood flow to fibrous tissue.

**Tubal ligation:** Fallopian tubes are tied off (ligated) and cut to prevent pregnancy.

## ABBREVIATIONS

<b>CS</b>	Cesarean section (fetus is removed through an abdominal incision)
<b>D&amp;C</b>	Dilation and curettage
<b>DUB</b>	Dysfunctional uterine bleeding (not associated with menstruation)
<b>GYN</b>	Gynecology
<b>HRT</b>	Hormone replacement therapy (estrogen and progesterone)
<b>IVF</b>	In vitro fertilization (egg and sperm are combined outside the body in a laboratory container; fertilized eggs are injected into the uterus for pregnancy)
<b>OB</b>	Obstetrics (labor and delivery of a fetus)
<b>PID</b>	Pelvic inflammatory disease (salpingitis, oophoritis, endometritis; leading causes are sexually transmitted infections)
<b>STI</b>	Sexually transmitted infection; also called STD (sexually transmitted disease)
<b>TAH-BSO</b>	Total abdominal hysterectomy with bilateral salpingo-oophorectomy (entire uterus and both fallopian tubes and ovaries are removed)

## MATCHING EXERCISES

The following exercises will help you review terminology related to the female reproductive system. Answers begin on [page 292](#).

**A** Match the term in Column I with its meaning in Column II.

Column I	Column II
1. ovary _____	A. Muscular passageway from the uterus to the outside of the body
2. cervix _____	B. Neck (lower portion) of the uterus
3. fallopian tube _____	C. One of two paired organs in the female abdomen that produce egg cells and hormones
4. vagina _____	D. One of two paired tubes that lead from the ovaries to the uterus
5. uterus _____	E. One of two paired organs containing glands that produce milk after childbirth
6. breast _____	F. Muscular organ that holds and provides nourishment for the developing fetus

**B Match the combining form in Column I with its meaning in Column II.**

Column I	Column II
1. oophor/o _____	A. Uterus
2. colp/o _____	B. Fallopian tube
3. salping/o _____	C. Neck of the uterus
4. hyster/o _____	D. Ovary
5. cervic/o _____	E. Vagina
6. mast/o _____	F. Breast

**C Match the medical term in Column I with its meaning in Column II.**

Column I	Column II
1. salpingectomy _____	A. Visual examination of the vagina
2. mammography _____	B. Pertaining to the lower, neck-like region of the uterus
3. vaginitis _____	C. Inflammation of the breast
4. colposcopy _____	D. Removal of a fallopian tube
5. hysterectomy _____	E. Inner lining of the uterus
6. cervical _____	F. X-ray imaging of the breast
7. endometrium _____	G. Resection of the uterus
8. mastitis _____	H. Inflammation of the vagina

**D Match the pathologic condition in Column I with its meaning in Column II.**

Column I	Column II
1. fibroids _____	A. Absence of menstrual flow
2. dysmenorrhea _____	B. Excessive discharge of blood from the uterus between menstrual periods
3. endometriosis _____	C. Leiomyomas (benign muscle growths) in the uterus
4. ectopic pregnancy _____	D. Uterine tissue found in sites (ovary, fallopian tubes) other than in the uterus
5. amenorrhea _____	E. Painful menstrual flow
6. pelvic inflammatory disease _____	F. Salpingitis
7. menorrhagia _____	G. Embryo develops outside the uterus

**E Match the test or procedure in Column I with its description in Column II.**

Column I	Column II
1. pregnancy test _____	A. Endoscopic visual examination of the vagina
2. pelvic ultrasonography _____	B. Withdrawal of fluid from a cavity or sac
3. conization _____	C. Removal of a section of the cervix for biopsy
4. colposcopy _____	D. X-ray imaging of the breast
5. mammography _____	E. X-ray examination of the uterus and fallopian tubes
6. Pap smear _____	F. Sound wave image of organs in the hip region
7. hysterosalpingography _____	G. Secretions from the vagina and cervix are examined microscopically
8. aspiration _____	H. Measurement of HCG levels
9. amniocentesis _____	I. Surgical puncture to remove fluid from the sac surrounding the fetus

**F Match the treatment procedure in Column I with its description in Column II.**

Column I	Column II
1. myomectomy _____	A. Use of cold temperatures to freeze and destroy tissue
2. cryosurgery _____	B. Fallopian tubes are tied to prevent pregnancy
3. cauterization _____	C. Removal of fibroids from the uterus
4. tubal ligation _____	D. Widening the cervix and scraping the lining of the uterus
5. D&C _____	E. Use of heat to destroy abnormal tissue

# LYMPHATIC SYSTEM

## ANATOMY

Lymph originates in the tissue spaces around cells and travels in **lymph vessels** and through **lymph nodes** to a large vein in the neck, where it enters the bloodstream. Arrows in the figure indicate the direction of lymph flow. Lymph contains white blood cells (lymphocytes), which help the body fight disease. The **spleen** produces lymphocytes and disposes of dying blood cells. The **thymus gland** stimulates the production of lymphocytes. (Modified from Chabner D-E: The Language of Medicine, ed 11, St. Louis, 2017, Elsevier.)

## TERMINOLOGY

Meanings for terminology are found in the *Mini-Dictionary*.

Combining Form	Meaning	Terminology	Meaning
lymph/o	lymph fluid	lymphoma _____	
lymphaden/o	lymph node (“gland”)	lymphadenectomy _____	
		lymphadenopathy _____	
lymphangi/o	lymph vessel	lymphangiectasis _____	
splen/o	spleen	splenomegaly _____	
thym/o	thymus gland	thymoma _____	

## PATHOLOGY

Definitions for additional terms in **boldface** are found in the *Mini-Dictionary*.

**Acquired immunodeficiency syndrome (AIDS):** Suppression or deficiency of the immune response (destruction of **lymphocytes**) caused by exposure to **human immunodeficiency virus (HIV)**.

**Lymphoma:** Malignant tumor of lymph nodes and lymphatic tissue.

**Hodgkin lymphoma** is an example of a lymphoma.

**Mononucleosis:** Acute infectious disease with enlargement of lymph nodes and increased numbers of **lymphocytes** and **monocytes** in the bloodstream.

**Sarcoidosis:** Inflammatory disease in which small nodules, or tubercles, form in lymph nodes and other organs. SARC/O means flesh, and -OID means resembling.

## LABORATORY TESTS AND DIAGNOSTIC PROCEDURES

Consult [Appendix 2](#) for pronunciation of terms and additional information.

**Computed tomography (CT) scan:** X-ray views in the transverse plane for the diagnosis of abnormalities in lymphoid organs (lymph nodes, spleen, and thymus gland).

**ELISA (enzyme-linked immunosorbent assay):** Test to screen for antibodies to the **human immunodeficiency virus (HIV)**, which causes **acquired immunodeficiency syndrome (AIDS)**.

**Western blot test:** A blood test to detect the presence of antibodies to specific antigens, such as the **human immunodeficiency virus**. It is regarded as a more precise test than the ELISA.

## TREATMENT PROCEDURES

**Chemotherapy:** Treatment with powerful drugs to kill cancer cells (**Hodgkin lymphoma, non-Hodgkin lymphoma, and multiple myeloma**) and viruses such as the **human immunodeficiency virus**.

**Radiotherapy (radiation therapy):** Treatment with high-dose radiation to destroy malignant lesions in the body.

## ABBREVIATIONS

<b>AIDS</b>	Acquired immunodeficiency syndrome
<b>ELISA</b>	Enzyme-linked immunosorbent assay (test to detect anti-HIV antibodies)
<b>HAART</b>	Highly active antiretroviral therapy (for AIDS)
<b>HIV</b>	Human immunodeficiency virus
<b>IgA, IgD, IgE, IgG, IgM</b>	Immunoglobulins (antibodies)
<b>MAC</b>	<i>Mycobacterium avium</i> complex (a group of pathogens that cause lung disease in patients with depressed immune systems)
<b>PCP</b>	<i>Pneumocystis pneumonia</i> (opportunistic infection seen in patients with AIDS)

## MATCHING EXERCISES

The following exercises will help you review terminology related to the lymphatic system. Answers begin on [page 292](#).

**A Match the term in Column I with its meaning in Column II.**

Column I	Column II
1. lymph nodes _____	A. Blood-forming organ in early life; later a storage organ for red blood cells and a source of lymphocytes
2. thymus _____	B. Gland in the mediastinum; produces lymphocytes, which play an important role in immunity
3. lymph _____	C. Stationary collections of lymph tissue throughout the body
4. spleen _____	D. Clear fluid, present in tissue spaces, that circulates in lymph vessels
5. lymph vessels _____	E. Small tubes that carry lymph fluid throughout the body

**B Match the combining form in Column I with its meaning in Column II.**

Column I	Column II
1. thym/o _____	A. Spleen
2. lymphangi/o _____	B. Lymph fluid
3. lymphaden/o _____	C. Thymus gland
4. splen/o _____	D. Lymph vessels
5. lymph/o _____	E. Lymph nodes (glands)

**C Match the medical term in Column I with its meaning in Column II.**

Column I	Column II
1. lymphadenopathy _____	A. Malignant tumor of lymph nodes and lymphatic tissue
2. lymphangiectasis _____	B. Acute infectious disease with enlargement of lymph nodes and increase in lymphocytes and monocytes
3. splenomegaly _____	C. Malignant tumor of a mediastinal lymphocyte-producing gland
4. lymphoma _____	D. Widening, dilation of lymph vessels
5. lymphadenectomy _____	E. Enlargement of an abdominal organ that produces lymphocytes
6. mononucleosis _____	F. Excision of lymph nodes
7. thymoma _____	G. Disease of lymph nodes

**D Match the procedure or test in Column I with its description in Column II.**

Column I	Column II
1. ELISA _____	A. Treatment with high-dose radiation to destroy malignant tissue
2. Western blot _____	B. X-ray images in a cross-sectional plane for diagnosis of lymph node abnormalities
3. chemotherapy _____	C. Precise blood test to detect antibodies to specific antigens, as in HIV infection
4. CT scan _____	D. Screening test for antibodies to the AIDS virus
5. radiotherapy _____	E. Treatment with powerful drugs to kill cancer cells

## MALE REPRODUCTIVE SYSTEM

### ANATOMY

Sperm cells are produced in the testes (*singular: testis*) and travel up into the body, through the **vas deferens**, and around the urinary bladder. The vas deferens unites with the **urethra**, which opens to the outside of the body through the **penis**. The **prostate** and the other glands near the **urethra** produce a fluid (semen) that leaves the body with sperm cells. (Modified from Chabner D-E: The Language of Medicine, ed 11, St. Louis, 2017, Elsevier.)

## TERMINOLOGY

Meanings for terminology are found in the *Mini-Dictionary*.

Combining Form	Meaning	Terminology	Meaning
<b>balan/o</b>	penis	<u>balan</u> itis _____	
<b>orch/o</b>	testis	<u>orch</u> itis _____	
<b>orchi/o</b>	testis; pl. testes	<u>orchi</u> ectomy _____	
<b>orchid/o</b>	testis	<u>orchid</u> ectomy _____	
<b>prostat/o</b>	prostate gland	<u>prostat</u> ectomy _____	
<b>scrot/o</b>	scrotum	<u>scrotal</u> _____	
<b>urethr/o</b>	urethra	<u>urethr</u> itis _____	
<b>vas/o</b>	vas deferens	<u>vas</u> ectomy _____	

## PATHOLOGY

Definitions for additional terms in **boldface** are found in the *Mini-Dictionary*.

**Benign prostatic hyperplasia:** Noncancerous enlargement of the prostate gland.

**Cryptorchism:** Condition of undescended testis. The testis is not in the scrotal sac at birth. CRYPT/O means hidden.

**Hydrocele:** Sac of clear fluid (swelling) in the scrotum. HYDR/O means water, and -CELE indicates a hernia (a bulging or swelling).

**Prostatic carcinoma:** Cancer of the prostate gland (prostate cancer).

**Sexually transmitted infections:** These affect both males and females and are spread by sexual or other genital contact. Examples are **chlamydial infection, gonorrhea, herpes genitalis, and syphilis.**

**Testicular carcinoma:** Malignant tumor of the testis. An example is a **seminoma.**

**Varicocele:** Enlarged, swollen veins near a testicle. VARIC/O means swollen veins.

## LABORATORY TESTS AND DIAGNOSTIC PROCEDURES

Consult [Appendix 2](#) for pronunciation of terms and additional information.

**Digital rectal examination (DRE):** Examination of the prostate gland with finger palpation through the rectum.

**Prostate-specific antigen (PSA):** Measurement of the amount of PSA in the blood. Higher than normal levels are associated with prostate enlargement and cancer.

**Semen analysis:** Measurement of the number, shape, and motility of sperm cells.

## TREATMENT PROCEDURES

**Orchiopexy:** Surgical fixation (-PEXY) of an undescended testicle in a young male infant.

**Transurethral resection of the prostate gland (TURP):** The removal of portions of the prostate gland with an **endoscope** inserted into the urethra.

**Photoselective vaporization of the prostate** (GreenLight PVP) is a newer technique that uses a laser to treat benign prostatic hyperplasia.

**Vasectomy:** Procedure in which the vas deferens on each side is cut, a piece is removed, and the free ends are folded and ligated (tied) with sutures. Vasectomy produces sterilization so that sperm are not released with semen.

## ABBREVIATIONS

**BPH** Benign prostatic hyperplasia

**DRE** Digital rectal examination

**GU** Genitourinary

**PSA** Prostate-specific antigen

**STI** Sexually transmitted infection; also called STD (sexually transmitted disease)

**TURP** Transurethral resection of the prostate gland

## MATCHING EXERCISES

The following exercises will help you review terminology related to the male reproductive system. Answers begin on [page 292](#).

**A** Match the term in Column I with its meaning in Column II.

Column I	Column II
1. scrotum _____	A. One of two paired male organs in the scrotum that produces sperm cells and male hormones
2. penis _____	B. External male organ, containing the urethra, through which both urine and semen (sperm cells and fluid) leave the body
3. vas deferens _____	C. Sac on the outside of the body that contains the testes
4. testis _____	D. One of two tubes that carry sperm cells from the testes to the outside of the body
5. prostate _____	E. Male organ that surrounds the base of the urinary bladder and produces fluid that leaves the body with sperm

**B Match the combining form in Column I with its meaning in Column II.**

Column I	Column II
1. prostat/o _____	A. Tube leading from the urinary bladder to the outside of the body
2. vas/o _____	B. Gland that produces fluid portion of semen
3. orch/o _____	C. Penis
4. scrot/o _____	D. Testis
5. balan/o _____	E. Tube carrying sperm cells from the testis to the ejaculatory duct and urethra
6. urethr/o _____	F. Sac containing the testes

**C Match the medical term in Column I with its meaning in Column II.**

Column I	Column II
1. urethritis _____	A. Resection of the prostate gland
2. scrotal _____	B. Inflammation of the penis
3. vasectomy _____	C. Inflammation of a testis
4. orchitis _____	D. Inflammation of the urethra
5. prostatectomy _____	E. Pertaining to the sac containing the testes
6. orchidectomy _____	F. Resection of a piece of each vas deferens
7. balanitis _____	G. Excision of a testicle

**D Match the pathologic condition in Column I with its meaning in Column II.**

Column I	Column II
1. varicocele _____	A. Undescended testicle
2. benign prostatic hyperplasia _____	B. Malignant tumor of the prostate gland
3. hydrocele _____	C. Hernia (collection of fluid) in the scrotal sac
4. testicular carcinoma _____	D. Malignant tumor; one type is a seminoma
5. prostatic carcinoma _____	E. Swollen, twisted veins near the testis
6. cryptorchism _____	F. Nonmalignant enlargement of the prostate gland

**E Match the test or procedure in Column I with its description in Column II.**

Column I	Column II
1. orchiopexy _____	A. Measurement of the number, shape, and motility of sperm cells
2. vasectomy _____	B. Measures blood levels of prostate-specific antigen
3. TURP _____	C. Examination of the prostate gland with finger palpation through the rectum
4. DRE _____	D. Removal of portions of the prostate gland with an endoscope inserted into the urethra
5. semen analysis _____	E. Surgical fixation of an undescended testicle
6. PSA test _____	F. Two tubes that carry sperm from the testicles are cut and tied off

# MUSCULOSKELETAL SYSTEM

## ANATOMY

Bones are connected to muscles that contract to move the body. Joints are the spaces between bones. Near the joints are ligaments that connect bones to other bones and tendons that connect bones to muscles. (Modified from Chabner D-E: *The Language of Medicine*, ed 11, St. Louis, 2017, Elsevier.)

For your reference, included here are anterior and posterior views of superficial muscles in the body.

The anterior superficial muscles. (Modified from Miller-Keane Encyclopedia & Dictionary of Medicine, Nursing, & Allied Health, ed 7, Philadelphia, 2003, Saunders.)

The posterior superficial muscles. (Modified from Miller-Keane Encyclopedia & Dictionary of Medicine, Nursing, & Allied Health, ed 7, Philadelphia, 2003, Saunders.)

## TERMINOLOGY

Meanings for terminology are found in the *Mini-Dictionary*.

Combining Form	Meaning	Terminology	Meaning
<b>arthr/o</b>	joint	<u>arthro</u> scopy _____	
<b>chondr/o</b>	cartilage	<u>chondro</u> ma _____	
<b>cost/o</b>	rib	<u>costo</u> chondritis _____	
<b>crani/o</b>	skull	<u>crani</u> otomy _____	
<b>ligament/o</b>	ligament	<u>ligament</u> ous _____	
<b>muscul/o</b>	muscle	<u>muscular</u> _____	
<b>my/o</b>	muscle	<u>myo</u> sarcoma _____	
<b>myos/o</b>	muscle	<u>myositis</u> _____	
<b>myel/o</b>	bone marrow	<u>myelo</u> dysplasia _____	
<b>oste/o</b>	bone	<u>osteomyelitis</u> _____	
<b>pelv/o</b>	pelvis, hipbone	<u>pelvic</u> _____	
<b>spondyl/o</b>	vertebra	<u>spondylosis</u> _____	
<b>vertebr/o</b>	vertebra	inter <u>vertebral</u> _____	
<b>ten/o</b>	tendon	<u>tenorrhaphy</u> _____	
<b>tendin/o</b>	tendon	<u>tendinitis</u> _____	

## PATHOLOGY

Definitions for additional terms in **boldface** are found in the *Mini-Dictionary*.

**Ankylosing spondylitis:** Chronic, progressive **arthritis** with stiffening (**ankylosis**) of joints, primarily of the spine and hip.

**Carpal tunnel syndrome:** Compression of the median nerve as it passes between the ligament and the bones and tendons of the wrist.

**Gouty arthritis:** Inflammation of joints caused by excessive uric acid. Also called **gout**.

**Muscular dystrophy:** An inherited disorder characterized by progressive weakness and degeneration of muscle fibers.

**Osteoporosis:** Decrease in bone density with thinning and weakening of bone.  
-POROSIS means condition of containing passages or spaces.

**Rheumatoid arthritis:** Chronic inflammation of joints; pain, swelling, and stiffening, especially in the small joints of the hands and feet. RHEUMAT/O means flowing, descriptive of the swelling in joints.

## LABORATORY TESTS AND DIAGNOSTIC PROCEDURES

Consult [Appendix 2](#) for pronunciation of terms and additional information.

**Antinuclear antibody (ANA) test:** Test in which a sample of plasma is tested for the presence of antibodies found in patients with systemic lupus erythematosus.

**Arthrocentesis:** Surgical puncture to remove fluid from a joint.

**Arthrography:** X-ray imaging of a joint.

**Arthroscopy:** Visual examination of a joint with an arthroscope.

**Bone density test:** Low-energy x-rays are used to image bones in the spinal column, pelvis, and wrist to detect areas of bone deficiency. Also called bone density scanning, dual-energy x-ray absorptiometry (DEXA), or bone densitometry.

**Bone scan:** Procedure in which a radioactive substance is injected intravenously and its uptake in bones is measured with a special scanning device.

**Calcium level:** Measurement of the amount of calcium in a sample of blood (serum). This test is important in evaluating diseases of bone.

**Electromyography (EMG):** Recording of the electrical activity of muscle tissue. This test reveals the strength of muscles.

**Erythrocyte sedimentation rate (ESR):** Measurement of the rate at which red blood cells fall to the bottom of a test tube. High sedimentation rates are associated with inflammatory diseases such as **rheumatoid arthritis**.

**Muscle biopsy:** The removal of muscle tissue for microscopic examination.

**Uric acid test:** Measurement of the amount of uric acid (nitrogenous waste) in a sample of blood. High uric acid levels are associated with gouty arthritis.

## TREATMENT PROCEDURES

**Arthroplasty:** Surgical repair of a joint. Total hip arthroplasty is the replacement of the head of the femur (thigh bone) and acetabulum (cup-shaped portion of the hip socket) with artificial parts (**prostheses**) that are cemented into the bone.

**Laminectomy:** Removal of a piece of backbone (lamina) to relieve pressure on nerves from a herniated disc.

**Microscopic discectomy:** Surgical removal of a herniated intervertebral disc with an incision that is 1 to 2 inches long and visualization of the surgical field with an operating microscope.

**Vertebroplasty:** Surgical repair of vertebrae. Special cement is injected into backbones to strengthen them and to relieve pain caused by compression fractures.

## ABBREVIATIONS

<b>ACL</b>	Anterior cruciate ligament (of the knee)
<b>ANA</b>	Antinuclear antibody
<b>C1-C7</b>	Cervical vertebrae
<b>Ca</b>	Calcium
<b>DEXA</b>	Dual-energy x-ray absorptiometry
<b>DJD</b>	Degenerative joint disease
<b>DOMS</b>	Delayed-onset muscle soreness
<b>EMG</b>	Electromyography
<b>ESR</b>	Erythrocyte sedimentation rate
<b>IM</b>	Intramuscular
<b>L1-L5</b>	Lumbar vertebrae
<b>NSAID</b>	Nonsteroidal anti-inflammatory drug (prescribed to treat joint and muscle pain)
<b>Ortho</b>	Orthopedics ( <i>or</i> orthopaedics)
<b>PT</b>	Physical therapy
<b>ROM</b>	Range of motion
<b>T1-T12</b>	Thoracic vertebrae

## MATCHING EXERCISES

The following exercises will help you review terminology related to the musculoskeletal system. Answers begin on [page 293](#).

**A** Match the term in Column I with its description in Column II.

Column I	Column II
1. cranium _____	A. Finger bones
2. clavicle _____	B. Thigh bone
3. humerus _____	C. Kneecap
4. radius _____	D. Lower arm bone on the thumb side
5. ulna _____	E. Collarbone
6. carpals _____	F. Tailbone
7. metacarpals _____	G. Breastbone
8. phalanges _____	H. Skull
9. scapula _____	I. Ankle bones
10. sternum _____	J. Lower arm bone (little finger side)
11. tarsals _____	K. Upper arm bone
12. metatarsals _____	L. Smaller of the lower leg bones
13. fibula _____	M. Hip bone
14. tibia _____	N. Lower part of the backbone near the hip
15. patella _____	O. Bones surrounding the chest cavity
16. sacrum _____	P. Larger of the lower leg bones
17. coccyx _____	Q. Hand bones
18. pelvis _____	R. Wrist bones
19. femur _____	S. Foot bones
20. ribs _____	T. Shoulder bone

**B Match the combining form in Column I with its meaning in Column II.**

Column I	Column II
1. crani/o _____	A. Backbone
2. arthr/o _____	B. Cartilage
3. oste/o _____	C. Joint
4. cost/o _____	D. Skull
5. pelv/o _____	E. Rib
6. my/o _____	F. Muscle
7. ten/o _____	G. Hip bone
8. chondr/o _____	H. Bone
9. spondyl/o _____	I. Connects muscles to bones
10. ligament/o _____	J. Connects bones to other bones

**C Match the medical term in Column I with its meaning in Column II.**

Column I	Column II
1. myelodysplasia _____	A. Incision of the skull
2. intervertebral _____	B. Inflammation of cartilage attached to ribs
3. osteomyelitis _____	C. Suture of a tendon
4. arthroscopy _____	D. Inflammation of bone and bone marrow
5. costochondritis _____	E. Pertaining to between the backbones
6. chondroma _____	F. Benign tumor of cartilage tissue
7. tenorrhaphy _____	G. Abnormal growth of bone marrow cells
8. myosarcoma _____	H. Malignant tumor of muscle tissue
9. craniotomy _____	I. Visual examination of a joint

**D Match the pathologic condition in Column I with its meaning in Column II.**

Column I	Column II
1. gouty arthritis _____	A. Chronic, progressive arthritis with stiffening of joints between the backbones
2. carpal tunnel syndrome _____	B. Compression of the median nerve in the wrist
3. rheumatoid arthritis _____	C. High levels of uric acid with inflammation of joints
4. osteoporosis _____	D. Weakness and degeneration of muscle fibers; congenital condition
5. ankylosing spondylitis _____	E. Chronic inflammation of joints, especially small bones in the hands and feet
6. muscular dystrophy _____	F. Decrease in bone density with thinning and weakening of bone

**E Match the test or procedure in Column I with its description in Column II.**

Column I	Column II
1. arthrocentesis _____	A. Recording the strength of muscle contraction
2. serum calcium _____	B. Measures sedimentation rate of red blood cells; indicates inflammation
3. electromyography _____	C. Plasma is tested for antibodies that are present in patients with systemic lupus erythematosus
4. bone scan _____	D. Removal of muscle tissue for microscopic analysis
5. ESR _____	E. Surgical puncture to remove fluid from a joint
6. ANA test _____	F. Radioactive substance is injected intravenously and uptake is measured in bone tissue
7. muscle biopsy _____	G. Measurement of an element in the blood that is necessary for normal bone formation
8. uric acid test _____	H. X-ray imaging of a joint
9. arthroscopy _____	I. Measurement of the amount of a substance in blood that is associated with gouty arthritis
10. arthrography _____	J. Visual examination of a joint using an endoscope

**F Match the treatment procedure in Column I with its description in Column II.**

Column I	Column II
1. laminectomy _____	A. Surgical repair of a joint
2. microscopic discectomy _____	B. Surgical repair of a backbone
3. arthroplasty _____	C. Removal of a herniated disc using a tiny incision and an operating microscope
4. vertebroplasty _____	D. Surgical removal of a portion of a vertebra to allow visualization and removal of a portion of a disk

# NERVOUS SYSTEM

## ANATOMY

The central nervous system consists of the brain and the spinal cord. The peripheral nervous system includes the nerves that carry messages to and from the brain and spinal cord. Spinal nerves carry messages to and from the spinal cord, and the cranial nerves (not pictured) carry messages to and from the brain.

## TERMINOLOGY

Meanings for terminology are found in the *Mini-Dictionary*.

Combining Form	Meaning	Terminology	Meaning
<b>cerebell/o</b>	cerebellum	<u>cerebellar</u> _____	
<b>cerebr/o</b>	cerebrum	<u>cerebral</u> _____	
<b>encephal/o</b>	brain	<u>encephalitis</u> _____	
<b>medull/o</b>	medulla oblongata	<u>medullary</u> _____	
<b>myel/o</b>	spinal cord	<u>myelitis</u> _____	
<b>neur/o</b>	nerve	<u>neuropathy</u> _____	

## PATHOLOGY

Definitions for additional terms in **boldface** are found in the *Mini-Dictionary*.

**Alzheimer disease:** Brain disorder marked by deterioration of mental capacity (**irreversible dementia**).

**Cerebrovascular accident:** Damage to the blood vessels of the cerebrum, leading to loss of blood supply to brain tissue; a **stroke**.

**Concussion:** Traumatic brain injury that can cause bruising, damage to blood vessels, and injury to nerves. Loss of consciousness may occur.

**Epilepsy:** Chronic brain disorder characterized by recurrent **seizures**.

**Glioblastoma:** Malignant brain tumor arising from **glial cells**. BLAST means immature.

**Hemiplegia: Paralysis** (-PLEGIA) that affects the right or the left half of the body.

**Meningitis:** Inflammation of the **meninges** (membranes surrounding the brain and spinal cord).

**Multiple sclerosis:** Destruction of the **myelin sheath** on nerve cells in the central nervous system (brain and spinal cord), with replacement by plaques of sclerotic (hard) tissue.

**Paraplegia: Paralysis** that affects the lower portion of the body. From a Greek word meaning “to strike” (-PLEGIA) on one side (PARA-). This term was previously used to describe **hemiplegia**.

**Syncope:** Fainting; sudden and temporary loss of consciousness as a result of inadequate flow of blood to the brain.

## LABORATORY TESTS AND DIAGNOSTIC PROCEDURES

Consult *Appendix 2* for pronunciation of terms and additional information.

**Cerebral angiography:** X-ray imaging of the blood vessels in the brain after the injection of contrast material into an artery.

**Cerebrospinal fluid (CSF) analysis:** Chemical tests (for sodium, chloride, protein, and glucose), cell counts, cultures, and bacterial smears on samples of CSF to detect diseases of the brain or meninges. A lumbar puncture is used to remove CSF for analysis.

**Computed tomography (CT) scan:** Cross-sectional x-ray images of the brain and spinal cord (with and without contrast).

**Electroencephalography (EEG):** Recording of the electrical activity within the brain.

**Lumbar puncture (LP):** Introduction of hollow needle into a space surrounding the spinal cord to withdraw cerebrospinal fluid (CSF) for analysis. Pressure of CSF is measured and contrast may be injected for imaging (myelography). Also known as a “spinal tap.”

**Magnetic resonance imaging (MRI):** Magnetic waves and radiofrequency waves are used to create images of the brain and spinal cord.

**Positron emission tomography (PET) scan:** Uptake of radioactive material into the brain shows how the brain uses glucose and gives information about brain function.

## TREATMENT PROCEDURES

**Stereotactic radiosurgery:** This is a nonsurgical type of radiation therapy used to treat abnormalities and small tumors of the brain. Also called Cyberknife® or stereotactic radiotherapy, this treatment can deliver precisely targeted radiation in fewer high-dose treatments than traditional therapy.

**Transcutaneous electrical nerve stimulation (TENS):** A battery-powered device delivers stimulation to nerves to relieve acute and chronic pain.

## ABBREVIATIONS

<b>AD</b>	Alzheimer disease
<b>CNS</b>	Central nervous system
<b>CSF</b>	Cerebrospinal fluid
<b>CVA</b>	Cerebrovascular accident (stroke)
<b>EEG</b>	Electroencephalography
<b>LP</b>	Lumbar puncture
<b>MS</b>	Multiple sclerosis
<b>TENS</b>	Transcutaneous electrical nerve stimulation
<b>TIA</b>	Transient ischemic attack (temporary interference with blood supply to the brain); “mini-stroke.”

## MATCHING EXERCISES

The following exercises will help you review terminology related to the nervous system. Answers begin on [page 293](#).

### A Match the term in Column I with its description in Column II.

Column I	Column II
1. cerebrum _____	A. Lower part of the brain, nearest to the spinal cord; it controls breathing and heart beat
2. spinal cord _____	B. Collection of nerves that are within the spinal cavity, surrounded by backbones
3. cerebellum _____	C. Largest part of the brain; controls body movements, thought, reasoning, vision, hearing, speech
4. medulla oblongata _____	D. Nerves that transmit messages to and from the spinal cord
5. spinal nerves _____	E. Lower back part of the brain that controls muscular coordination and balance

### B Match the combining form in Column I with its meaning in Column II.

Column I	Column II
1. cerebell/o _____	A. Nerve
2. medull/o _____	B. Cerebellum
3. myel/o _____	C. Brain
4. cerebr/o _____	D. Spinal cord
5. encephal/o _____	E. Medulla oblongata
6. neur/o _____	F. Cerebrum

**C Match the medical term in Column I with its meaning in Column II.**

Column I	Column II
1. myelitis _____	A. Disease of nerves
2. cerebral _____	B. Pertaining to the largest part of the brain
3. medullary _____	C. Pertaining to the posterior portion of the brain that controls equilibrium
4. encephalitis _____	D. Inflammation of the spinal cord
5. neuropathy _____	E. Inflammation of the brain
6. cerebellar _____	F. Pertaining to the lower part of the brain closest to the spinal cord

**D Match the pathologic condition in Column I with its meaning in Column II.**

Column I	Column II
1. cerebrovascular accident _____	A. Inflammation of the membrane surrounding the brain and spinal cord.
2. multiple sclerosis _____	B. Brain disorder marked by deterioration in mental activity (dementia)
3. concussion _____	C. Fainting
4. syncope _____	D. Paralysis on one side of the body
5. epilepsy _____	E. Damage to blood vessels in the brain; a stroke
6. meningitis _____	F. Destruction of myelin sheath around nerve cells in the CNS
7. glioblastoma _____	G. Blunt injury to the brain severe enough to cause loss of consciousness
8. paraplegia _____	H. Paralysis of the lower portion of the body
9. hemiplegia _____	I. Malignant tumor of the brain
10. Alzheimer disease _____	J. Chronic brain disorder with seizure activity

**E Match the test or procedure in Column I with its description in Column II.**

Column I	Column II
1. lumbar puncture _____	A. Uptake of radioactive material in the brain shows how the brain uses glucose
2. CSF analysis _____	B. Chemical tests, cell counts, cultures, and smears of fluid surrounding the brain and spinal cord
3. cerebral angiography _____	C. Record of the electrical activity in the brain
4. electroencephalogram _____	D. Procedure to remove cerebrospinal fluid; measurement of pressure and injection of contrast
5. PET scan _____	E. X-ray image of blood vessels in the brain after injection of contrast
6. MRI _____	F. A battery-powered device delivers stimulation to nerves to relieve acute and chronic pain
7. stereotactic radiosurgery _____	G. Cross-sectional x-ray images of the brain and spinal cord
8. CT scan _____	H. Magnetic and radiofrequency waves create images of the brain and spinal cord tissue
9. TENS _____	I. Nonsurgical type of radiation therapy used to treat abnormalities and small tumors of the brain; also called Cyberknife®

# RESPIRATORY SYSTEM

## ANATOMY

Air enters the **nose** and travels to the **pharynx** (throat). From the pharynx, air passes through the **epiglottis** and **larynx** (voice box) into the **trachea** (windpipe). The trachea splits into two tubes, the **bronchial tubes** that carry air into the lungs. The bronchial tubes divide into smaller tubes, called **bronchioles**, that end in **small alveoli**, or **air sacs**. The thin walls of these sacs allow oxygen to pass through them into tiny capillaries containing red blood cells. Red blood cells transport the oxygen to all parts of the body. In a similar manner, gaseous waste (carbon dioxide) leaves the blood by entering the alveoli and traveling out of the body through bronchioles, bronchial tubes, trachea, larynx, pharynx, and the nose. (Modified from Chabner D-E: The Language of Medicine, ed 11, St. Louis, 2017, Elsevier.)

**TERMINOLOGY**

Meanings for terminology are found in the *Mini-Dictionary*.

Combining Form	Meaning	Terminology	Meaning
<b>adenoid/o</b>	adenoid	<u>adeno</u> idectomy _____	
<b>alveol/o</b>	alveoli (air sacs)	<u>alveolar</u> _____	
<b>bronch/o</b>	bronchial tube	<u>bronch</u> oscopy _____ <u>bronch</u> itis _____	
<b>bronchiol/o</b>	bronchiole	<u>bronchiol</u> itis _____	
<b>cyan/o</b>	blue	<u>cyan</u> osis _____	
<b>epiglott/o</b>	epiglottis	<u>epiglott</u> itis _____	
<b>laryng/o</b>	larynx	<u>laryngeal</u> _____	
<b>nas/o</b>	nose	<u>nasal</u> _____	
<b>rhin/o</b>	nose	<u>rhinorr</u> hea _____	
<b>pharyng/o</b>	pharynx	<u>pharyng</u> itis _____	
<b>phren/o</b>	diaphragm	<u>phrenic</u> _____	
<b>pneumon/o</b>	lung	<u>pneumon</u> ectomy _____	
<b>pulmon/o</b>	lung	<u>pulmonary</u> _____	
<b>tonsill/o</b>	tonsils	<u>tonsill</u> itis _____	
<b>trache/o</b>	trachea	<u>trache</u> itis _____ <u>trache</u> ostomy _____	

## PATHOLOGY

Definitions for additional terms in **boldface** are found in the *Mini-Dictionary*.

**Asphyxia:** Deficiency of oxygen in the blood and increase in carbon dioxide in blood and tissues. Major sign is a complete absence of breathing, leading to loss of consciousness or death.

**Asthma:** Spasm and narrowing of bronchi, leading to bronchial airway obstruction.

**Atelectasis:** Collapsed lung (ATEL/O means incomplete, and -ECTASIS indicates dilation or expansion).

**Emphysema:** Hyperinflation of air sacs with destruction of alveolar walls.

Along with **chronic bronchitis**, emphysema is a type of **chronic obstructive pulmonary disease (COPD)**.

**Hemoptysis:** Spitting up of blood.

**Hemothorax:** Blood from the respiratory tract in the pleural cavity (space between the **pleural membranes**).

**Pneumoconiosis:** Abnormal condition of dust (CONI/O) in the lungs.

**Pneumonia:** Abnormal condition of the lungs marked by inflammation and collection of infected material in air sacs (pus or products of the inflammatory reaction).

**Tuberculosis:** Infectious and inflammatory disease caused by bacteria (bacilli).

The lungs and other organs are affected. Signs and symptoms are cough, weight loss, night sweats, **hemoptysis**, and pleuritic pain.

## LABORATORY TESTS AND DIAGNOSTIC PROCEDURES

Consult [Appendix 2](#) reference for pronunciation of terms and additional information.

**Bronchoscopy:** Visual examination of the bronchial tubes with an endoscope.

**Chest x-ray film:** X-ray image of the chest in an AP (anteroposterior), PA (posteroanterior), or lateral (side) view.

**Computed tomography (CT) scan:** Cross-sectional x-ray images of the chest.

**Laryngoscopy:** Visual examination of the larynx via the placement of a flexible tube (laryngoscope) through the nose or mouth and into the larynx.

**Magnetic resonance imaging (MRI):** Magnetic waves and radiofrequency waves create images of the chest in three planes of the body.

**Pulmonary angiography:** X-ray images are taken of the blood vessels in the lung after injection of contrast into a blood vessel. This procedure has been largely replaced by computed tomography (CT of the lungs).

**Pulmonary function test (PFT):** Measurement of the ventilation (breathing capability) of the lungs. A **spirometer** measures the air taken into and breathed out of the lungs.

**Sputum test:** Examination of mucus coughed up from a patient's lungs to detect infection.

**Tuberculin test:** Agents are applied to the skin with punctures or injection and the reaction is noted. Redness and swelling result in people sensitive to the test substance and indicate previous or current infection with **tuberculosis**.

**Ventilation-perfusion scan:** A nuclear medicine test that uses radioactive material (radiopharmaceutical) to examine airflow (ventilation) and blood flow (perfusion) in the lungs.

## TREATMENT PROCEDURES

**Endotracheal intubation:** Tube is placed through the nose or mouth into the trachea to establish an airway during surgery and for placement on a respirator (a machine that moves air into and out of the lungs).

**Thoracentesis:** Needle is inserted through the skin between the ribs and into the pleural space to drain a **pleural effusion**.

**Thoracotomy:** Incision of the chest to remove a lung (**pneumonectomy**) or a portion of a lung (**lobectomy**).

**Tracheostomy:** Creation of an opening into the trachea through the neck and the insertion of a tube to create an airway.

## ABBREVIATIONS

<b>ABG</b>	Arterial blood gas
<b>ARDS</b>	Acute respiratory distress syndrome
<b>CO<sub>2</sub></b>	Carbon dioxide (gas expelled from the lungs)
<b>COPD</b>	Chronic obstructive pulmonary disease (chronic bronchitis and emphysema)
<b>CPAP</b>	Continuous positive airway pressure (machine used to keep airway open)
<b>CPR</b>	Cardiopulmonary resuscitation (technique to restore breathing and heart rate)
<b>CXR</b>	Chest x-ray (film or image)
<b>O<sub>2</sub></b>	Oxygen (gas entering the bloodstream through the lungs)
<b>MDI</b>	Metered-dose inhaler (that delivers specific amount of medication to the lungs)
<b>PE</b>	Pulmonary embolism (blockage of vessels in the lung by a blood clot)
<b>PEEP</b>	Positive end-expiratory pressure (method of mechanical ventilation)
<b>PFT</b>	Pulmonary function test (measurement of the breathing capability of the lung)
<b>SOB</b>	Shortness of breath
<b>URI</b>	Upper respiratory infection
<b>VATS</b>	Video-assisted thoracic surgery (using small incisions and an endoscope)
<b>VQ</b>	Ventilation-perfusion scan (also called VQ scan)

## MATCHING EXERCISES

The following exercises will help you review terminology related to the respiratory system. Answers begin on [page 293](#).

**A** Match the term in Column I with its description in Column II.

Column I	Column II
1. nose _____	A. Throat
2. epiglottis _____	B. Windpipe
3. larynx _____	C. Muscle that separates the chest from the abdomen
4. pharynx _____	D. Flap of cartilage over the “mouth” of the trachea
5. lung _____	E. Small bronchial tube
6. diaphragm _____	F. Structure on the face that filters/warms air entering the body
7. trachea _____	G. Thin-walled sac through which gases can pass into and out of the bloodstream
8. bronchial tube _____	H. One of two tubes that carry air from the windpipe to the lungs
9. bronchiole _____	I. Voice box
10. air sac _____	J. One of two paired organs in the chest through which oxygen enters and carbon dioxide leaves the bloodstream

**B Match the combining form in Column I with its meaning in Column II.**

Column I	Column II
1. pharyng/o _____	A. Diaphragm
2. bronch/o _____	B. Air sac
3. bronchiol/o _____	C. Windpipe
4. nas/o or rhin/o _____	D. Nose
5. laryng/o _____	E. Throat
6. phren/o _____	F. Voice box
7. trache/o _____	G. Tube that carries air from the windpipe to the lung
8. epiglott/o _____	H. Lung
9. alveol/o _____	I. Small bronchus
10. pneumon/o _____	J. Epiglottis

**C Match the medical term in Column I with its meaning in Column II.**

Column I	Column II
1. pulmonary _____	A. Discharge from the nose
2. rhinorrhea _____	B. Pertaining to an air sac
3. pneumonectomy _____	C. Inflammation of the throat
4. bronchoscopy _____	D. Pertaining to a lung
5. laryngeal _____	E. New opening of the windpipe to the outside of the body
6. pharyngitis _____	F. Pertaining to the nose
7. phrenic _____	G. Visual examination of the bronchus
8. tracheostomy _____	H. Resection of a lung
9. alveolar _____	I. Pertaining to the voice box
10. nasal _____	J. Pertaining to the diaphragm

**D Match the pathologic condition in Column I with its meaning in Column II.**

Column I	Column II
1. atelectasis _____	A. Collapsed lung
2. hemothorax _____	B. Condition of dust particles in the lung
3. asphyxia _____	C. Spitting up blood
4. emphysema _____	D. Infectious disease caused by bacilli; lungs and other organs are affected
5. asthma _____	E. Inflammation and infection of alveoli
6. hemoptysis _____	F. Blood in the pleural space
7. tuberculosis _____	G. Extreme decrease in oxygen and increase in carbon dioxide in the blood
8. pneumonia _____	H. Hyperinflation of air sacs and destruction of alveolar walls
9. pneumoconiosis _____	I. Spasm and narrowing of bronchial tubes leading to airway obstruction

**E Match the test or procedure in Column I with its description in Column II.**

Column I	Column II
1. pulmonary angiography _____	A. Radiographic image in AP, PA, or lateral view
2. laryngoscopy _____	B. Material expelled by coughing is analyzed
3. ventilation-perfusion scans _____	C. Visual examination of bronchial tubes
4. PFTs _____	D. After administration of radioactive material (by injection or inhalation), images reveal distribution in lung tissue
5. chest x-ray _____	E. Magnetic waves produce images of the chest in three planes
6. bronchoscopy _____	F. Measurements of the ventilation capability of the lung using a spirometer
7. sputum test _____	G. X-ray images of blood vessels in the lung
8. MRI _____	H. Visual examination of the voice box
9. tuberculin test _____	I. Cross-sectional x-ray images of the chest
10. chest CT scan _____	J. Agents are applied to the skin with punctures, and reaction is noted

**F Match the treatment procedure in Column I with its description in Column II.**

Column I	Column II
1. tracheostomy _____	A. A tube is placed through the nose or mouth into the windpipe to establish an airway
2. thoracentesis _____	B. Creation of an opening into the windpipe through the neck and insertion of a tube to create an airway
3. endotracheal intubation _____	C. Incision of the chest to remove a lung or a portion of a lung
4. thoracotomy _____	D. Insertion of a needle through the skin between the ribs and into the pleural space to drain a pleural effusion

**SKIN AND SENSE ORGANS**

**ANATOMY**

**SKIN**  
(derm/o, dermat/o, cutane/o)

**HAIR**  
(pil/o, trich/o)

**NAIL**  
(onych/o, ungu/o)

The skin and sense organs receive messages (touch sensations, light waves, sound waves) from the environment and send them to the brain via nerves. These messages are interpreted in the brain, making sight, hearing, and tactile (touch) perception of the environment possible. (Modified from Chabner D-E: The Language of Medicine, ed 11, St. Louis, 2017, Elsevier.)

## TERMINOLOGY

Meanings for terminology are found in the *Mini-Dictionary*.

Combining Form	Meaning	Terminology	Meaning
<b>cutane/o</b>	skin	sub <u>cutaneous</u> _____	
<b>derm/o</b>	skin	epi <u>dermis</u> _____	
<b>dermat/o</b>	skin	<u>dermatology</u> _____	
<b>onych/o</b>	nail	<u>onycholysis</u> _____	
<b>ungu/o</b>	nail	sub <u>ungual</u> _____	
<b>pil/o</b>	hair	<u>pilosebaceous</u> _____	
<b>trich/o</b>	hair	<u>trichotillomania</u> _____	
<b>ocul/o</b>	eye	<u>ocular</u> _____	
<b>ophthalm/o</b>	eye	<u>ophthalmoscope</u> _____	
<b>phak/o</b>	lens of the eye	<u>aphakia</u> _____	
<b>retin/o</b>	retina	<u>retinopathy</u> _____	
<b>aur/o</b>	ear	<u>aural discharge</u> _____	
<b>ot/o</b>	ear	<u>otitis</u> _____	
<b>myring/o</b>	eardrum	<u>myringotomy</u> _____	
<b>tympan/o</b>	eardrum	<u>tympanoplasty</u> _____	

## PATHOLOGY

Definitions for additional terms in **boldface** are found in the *Mini-Dictionary*.

**Alopecia:** Absence of hair from areas where it normally grows; baldness.

**Cataract:** Clouding (opacity) of the lens of the eye, causing impairment of vision or blindness.

**Conjunctivitis:** Inflammation of the **conjunctiva**.

**Glaucoma:** Increase in pressure (fluid accumulation) within the chamber at the front of the eye.

**Melanoma:** Malignant tumor of pigmented cells (MELAN/O means black) that arises from a nevus (benign mole) in the skin.

**Nevus:** Pigmented lesion in or on the skin; a mole.

**Stye or sty:** Pus-filled (purulent) infection of glands near the eyelid (most often caused by bacteria). Also called **hordeolum**.

**Tinnitus:** Abnormal noise (ringing, buzzing, roaring) sound in the ears.

## LABORATORY TESTS AND DIAGNOSTIC PROCEDURES

Consult [Appendix 2](#) for pronunciation of terms and additional information.

**Allergy test:** Procedure in which allergy-causing substances are placed on the skin and a reaction is noted. In the patch test, a patch with a suspected allergen is placed on the skin. The scratch test involves making several scratches and inserting a small amount of allergen in the scratches.

**Bacterial and fungal tests:** Procedures in which samples from skin lesions are taken to determine the presence of bacterial infection or fungal growth.

**Fluorescein angiography:** Fluorescein (a contrast substance) is injected intravenously and the movement of blood in the back of the eye is observed by ophthalmoscopy. It is used to detect diabetic or hypertensive retinopathy and also degeneration of the macular (central) area of the retina.

**Ophthalmoscopy:** Visual examination of the interior of the eye.

**Otoscopy:** Visual examination of the interior of the ear (to the eardrum).

**Skin biopsy:** Procedure in which samples of skin lesions are removed and sent to the pathology laboratory for microscopic examination.

**Slit-lamp microscopy:** Examination of the anterior eye structures (such as the cornea) using an instrument that projects intense light through a narrow opening for optimal visualization.

**Tuning fork test:** Procedure in which a vibration source (tuning fork) is placed in front of the opening to the ear to test air conduction of sound waves. The tuning fork is also placed on the mastoid bone behind the ear to test bone conduction of sound waves.

## ABBREVIATIONS

<b>ENT</b>	Ears, nose, throat
<b>HEENT</b>	Head, eyes, ears, nose, throat
<b>PERRLA</b>	<i>Pupils equal, round, reactive to light and accommodation</i>
<b>VA</b>	Visual acuity (clarity of vision)
<b>VF</b>	Visual field

## MATCHING EXERCISES

The following exercises will help you review terminology related to the skin and sense organs. Answers begin on [page 294](#).

### A Match the term in Column I with its description in Column II.

Column I	Column II
1. epidermis _____	A. Oil-producing gland in the skin
2. sebaceous gland _____	B. Gland in the skin that produces a watery, salt-containing fluid
3. dermis _____	C. Innermost layer of the skin, composed of fatty tissue
4. subcutaneous tissue _____	D. Middle layer of the skin, containing hair follicles, connective tissue, blood vessels, and glands
5. sweat gland _____	E. Outer layer of the skin

### B Match the term in Column I with its description in Column II.

Column I	Column II
1. retina _____	A. White, outer coat of the eyeball
2. conjunctiva _____	B. Membrane that separates the outer and middle parts of the ear
3. pupil _____	C. Transparent structure behind the pupil that bends light rays so that they focus on the back of the eye
4. lens _____	D. Nerve that carries messages from the inner ear to the brain
5. cornea _____	E. Transparent layer over the front of the eye that bends light so that it is focused on the back of the eye
6. sclera _____	F. Black center of the eye through which light enters
7. iris _____	G. Layer of sensitive cells (rods and cones) at the back of the eye
8. eardrum _____	H. Nerve at the back of the eye that transmits light waves to the brain
9. auditory canal _____	I. Colored, pigmented portion of the eye
10. auditory nerve _____	J. Passageway leading into the ear from the outside of the body
11. optic nerve _____	K. Thin, protective membrane over the front of the eye

**C Match the combining form in Column I with its meaning in Column II.**

Column I	Column II
1. derm/o _____	A. Eye
2. phak/o _____	B. Hair
3. retin/o _____	C. Skin
4. myring/o _____	D. Posterior, sensitive cell layer of the eye
5. aur/o _____	E. Nail
6. ophthalm/o _____	F. Eardrum
7. ungu/o _____	G. Lens of the eye
8. pil/o _____	H. Ear

**D Match the medical term in Column I with its meaning in Column II.**

Column I	Column II
1. ocular _____	A. Disease of the rod and cone layer of eye (sensitive cells at the back of the eye)
2. otitis _____	B. Pertaining to under the nail
3. subcutaneous _____	C. Absence of the lens of the eye
4. myringotomy _____	D. Inflammation of the ear
5. aphakia _____	E. Pertaining to the eye
6. epidermis _____	F. Pertaining to under the skin
7. retinopathy _____	G. Incision of the eardrum
8. ophthalmoscope _____	H. Outer layer of the skin
9. tympanoplasty _____	I. Instrument to visually examine the eye
10. subungual _____	J. Surgical repair of the eardrum

**E Match the pathologic condition in Column I with its meaning in Column II.**

Column I	Column II
1. melanoma _____	A. Clouding of the lens of the eye, causing impairment of vision
2. glaucoma _____	B. Absence of hair from areas where it normally grows
3. conjunctivitis _____	C. Pigmented lesion on the skin; mole
4. tinnitus _____	D. Increase in pressure within the chamber at the front of the eye
5. cataract _____	E. Abnormal noise (ringing, buzzing) or sound in the ears
6. nevus _____	F. Malignant tumor of pigmented cells in the skin
7. alopecia _____	G. Inflammation of the mucous membrane lining the inner surface of the eyelid

**F Match the test or procedure in Column I with its description in Column II.**

Column I	Column II
1. skin biopsy _____	A. Samples from skin lesions are examined to detect presence of microorganisms
2. slit-lamp microscopy _____	B. Visual examination of the interior of the eye
3. tuning fork tests _____	C. Patch test; scratch test
4. fluorescein angiography _____	D. Skin lesions are removed and sent to pathology laboratory for microscopic examination
5. otoscopy _____	E. Dye is injected intravenously, and movement of blood through blood vessels in the back of the eye is observed with an ophthalmoscope
6. allergy test _____	F. Visual examination of the ear to the eardrum
7. bacterial and fungal tests _____	G. Microscopic examination of the anterior eye structures, such as the cornea, under intense light
8. ophthalmoscopy _____	H. A vibration source is placed in front of the opening of the ear to test air conduction of sound waves

## URINARY SYSTEM

### ANATOMY (FEMALE URINARY TRACT)

Urine is formed as waste materials, such as urea, are filtered from the blood into the tubules of the **kidney**. Urea is a nitrogenous waste product formed as proteins are used in cells. Urine passes from the kidney tubules into the central collecting section of the kidney, the **renal pelvis**. Each renal pelvis leads directly to a **ureter**, which takes the urine to the **urinary bladder**. The bladder releases urine to the **urethra**, and urine leaves the body. (Modified from Chabner D-E: The Language of Medicine, ed 11, St. Louis, 2017, Elsevier.)

## TERMINOLOGY

Meanings for terminology are found in the *Mini-Dictionary*.

Combining Form	Meaning	Terminology	Meaning
cyst/o	urinary bladder	cystoscopy _____	
vesic/o	urinary bladder	intravesical _____	
nephr/o	kidney	nephritis _____	
ren/o	kidney	renal _____	
pyel/o	renal pelvis	pyelogram _____	
ureter/o	ureter	ureterectomy _____	
urethr/o	urethra	urethritis _____	

## PATHOLOGY

Definitions for additional terms in **boldface** are found in the *Mini-Dictionary*.

**Albuminuria:** Abnormal condition of protein (albumin) in the urine.

**Anuria:** Abnormal condition of no urine production.

**Dysuria:** Painful urination.

**Glycosuria:** Abnormal condition of glucose in the urine.

**Hematuria:** Abnormal condition of blood in the urine.

**Nephrolithiasis:** Abnormal condition of stones in the kidney.

**Renal failure:** Condition in which the kidneys stop functioning and do not produce urine.

**Uremia:** Condition of high levels of **urea** (nitrogenous waste material) in the blood.

## LABORATORY TESTS AND DIAGNOSTIC PROCEDURES

Consult [Appendix 2](#) for pronunciation of terms and additional information.

**Blood urea nitrogen (BUN):** Measures the amount of urea (nitrogenous waste) in the blood.

**Cystoscopy:** Visual examination of the urinary bladder with a cystoscope (endoscope).

**Kidneys, ureters, bladder (KUB):** X-ray images of the kidneys and urinary tract made without the use of contrast material.

**Retrograde pyelogram (RP):** Contrast material is injected through a catheter (a flexible, tubular instrument) into the urethra and bladder, and x-ray images are taken of the urethra, bladder, and ureters.

**Voiding cystourethrogram (VCUG):** X-ray films of the bladder and urethra taken after the bladder is filled with a contrast material and while the patient is expelling urine. Also called **cystogram**.

**Urography:** X-ray imaging of the urinary tract after injection of contrast material; pyelography.

## TREATMENT PROCEDURES

**Dialysis:** Waste materials (**urea, creatinine, and uric acid**) are separated from the blood by a machine (**hemodialysis**). Alternatively, in peritoneal dialysis, an intra-abdominal catheter (a flexible tubular instrument), delivers a special fluid into the abdominal cavity. After several hours, the fluid containing waste materials that have seeped into it from the blood is drained.

**Lithotripsy:** Shock waves are beamed into a patient to crush urinary tract stones. The stone fragments then pass out of the body with urine. Also called **extracorporeal shock wave lithotripsy (ESWL)**.

**Renal transplantation:** A donor kidney is transferred to a recipient, whose kidneys have both failed.

**Urinary catheterization:** A catheter (a flexible tubular instrument) is passed through the urethra and into the urinary bladder for short-term or long-term drainage of urine.

## ABBREVIATIONS

<b>ARF</b>	Acute renal failure
<b>BUN</b>	Blood urea nitrogen (measures kidney function)
<b>CAPD</b>	Continuous ambulatory peritoneal dialysis
<b>CKD</b>	Chronic kidney disease (rising BUN and serum creatinine levels affect many body systems)
<b>GFR</b>	Glomerular filtration rate (measured to document stages of kidney disease)
<b>HD</b>	Hemodialysis
<b>KUB</b>	Kidneys, ureters, bladder (series of x-ray images made without contrast)
<b>RP</b>	Retrograde pyelogram
<b>UA</b>	Urinalysis
<b>UTI</b>	Urinary tract infection
<b>VCUG</b>	Voiding cystourethrogram

## MATCHING EXERCISES

The following exercises will help you review terminology related to the urinary system. Answers begin on [page 294](#).

### A Match the term in Column I with its description in Column II.

Column I	Column II
1. urinary bladder _____	A. Tube that leads from the bladder to the outside of the body
2. kidney _____	B. Central section of the kidney
3. renal pelvis _____	C. Organ behind the abdomen that makes urine by filtering wastes from the blood
4. ureter _____	D. One of two tubes that carry urine from the kidney to the urinary bladder
5. urethra _____	E. Muscular sac that holds urine and releases it to leave the body through the urethra

### B Match the combining form in Column I with its meaning in Column II.

Column I	Column II
1. ureter/o _____	A. Urinary bladder
2. urethr/o _____	B. Tube leading from the urinary bladder to the outside of the body
3. pyel/o _____	C. Kidney
4. cyst/o, vesic/o _____	D. Tube leading from the kidney to the urinary bladder
5. nephr/o, ren/o _____	E. Renal pelvis (central collecting basin of the kidney)

**C Match the medical term in Column I with its meaning in Column II.**

Column I	Column II
1. pyelogram _____	A. X-ray record of the renal pelvis
2. urethritis _____	B. Visual examination of the urinary bladder
3. nephritis _____	C. Resection of a ureter
4. intravesical _____	D. Pertaining to within the urinary bladder
5. cystoscopy _____	E. Inflammation of the kidney
6. ureterectomy _____	F. Pertaining to the kidney
7. renal _____	G. Inflammation of the urethra

**D Match the pathologic condition in Column I with its meaning in Column II.**

Column I	Column II
1. dysuria _____	A. Kidneys stop functioning and fail to produce urine
2. hematuria _____	B. Abnormal condition of protein in urine
3. uremia _____	C. Blood in the urine
4. renal failure _____	D. No urine production
5. nephrolithiasis _____	E. High levels of urea in the bloodstream
6. albuminuria _____	F. Sugar in the urine
7. glycosuria _____	G. Painful urination
8. anuria _____	H. Abnormal condition of kidney stones

**E** Match the test or procedure in Column I with its description in Column II.

Column I	Column II
1. KUB _____	A. Measurement of amount of nitrogenous wastes in the blood
2. dialysis _____	B. Visual examination of the urinary bladder
3. VCUg _____	C. X-ray images of the kidneys and urinary tract without contrast
4. lithotripsy _____	D. Tube is passed through the urethra into the urinary bladder for short- or long-term drainage of urine
5. renal transplantation _____	E. Shock waves are beamed into the patient to crush stones in the kidney or ureter
6. cystoscopy _____	F. Nitrogenous waste materials are separated from the blood by a machine
7. BUN _____	G. After the bladder is filled with contrast, x-ray images are taken of the bladder as the patient is expelling urine
8. retrograde pyelogram _____	H. Contrast material is injected via a catheter into the bladder, and x-ray images are taken of the ureters, bladder, and urethra
9. urinary catheterization _____	I. A kidney from a donor is surgically implanted in a patient whose kidneys have failed

# Diagnostic Tests and Procedures

This resource contains a color-coded list of common diagnostic tests and procedures. Below is information related to the types of tests/procedures.

- **Radiology, Ultrasound, and Imaging Procedures**

In many procedures, a *contrast* substance (sometimes referred to as a *dye*) is introduced into the bloodstream, the gastrointestinal tract, or spinal cord so that a body part can be viewed while x-ray pictures are taken. The contrast substance (often containing barium or iodine) blocks the transmission of the x-ray and appears dense on the x-ray image. It outlines the body part that it fills.

The suffix **-GRAPHY**, meaning process of recording, is used in many terms describing imaging procedures. The suffix **-GRAM**, meaning a record, also is used and describes the actual image that is produced by this procedure.

- **Nuclear Medicine: Radionuclide Scans**

In these diagnostic tests, radioactive material (*radionuclide* or *radioisotope*) is injected intravenously or inhaled and then detected with a scanning device in the organ in which it accumulates. X-rays, ultrasound waves, or magnetic waves are not used.

- **Clinical Procedures**

These procedures are performed on patients to establish a correct diagnosis of an abnormal condition. In some instances, the procedure also may be used to treat the condition.

- **Laboratory Tests**

These tests are performed on samples of a patient's blood, *plasma* (fluid portion of the blood), *serum* (plasma minus clotting proteins and produced after blood has clotted), urine, feces, *sputum* (mucus coughed up from the lungs), *cerebrospinal fluid* (fluid within the spaces around the spinal cord and brain), and skin.

In the pronunciation of each term, the syllable that gets the accent is in CAPITAL LETTERS.

*Italicized* terms indicate important additional terminology.

Terms in SMALL CAPITAL LETTERS are defined elsewhere in this section.

Definitions of medical terms in this section are also on the Student Evolve Resource.

## A

**Abdominocentesis** (ab-dom-in-o-sen-TE-sis): See PARACENTESIS.

**Acid phosphatase test** (AH-sid FOS-fah-tays): Measurement of the amount of an enzyme called *acid phosphatase* in serum. Enzyme levels are elevated in metastatic prostate cancer. Moderate elevations occur in bone disease and metastatic breast cancer.

**Alanine transaminase (ALT) test** (AL-ah-noon tranz-AM-ih-nays): Measurement of the amount of the enzyme called *alanine transaminase* in serum. The enzyme is normally present in blood but accumulates in blood with damage to liver cells. Formerly called SGPT.

**Albumin test** (al-BU-min): Measurement of the amount of albumin (a large protein found in blood and tissues) in both serum and urine. A decreased albumin level in serum indicates malnutrition or liver disease or may occur with extensive loss of protein in the urine or intestines, or from the skin, as in a burn. The presence of albumin in the urine (*albuminuria*) indicates malfunction of the kidney.

**Alkaline phosphatase test** (AL-kah-lin FOS-fah-tase): Measurement of the amount of *alkaline phosphatase* (an enzyme found in cells) in serum. Levels are elevated in liver diseases (such as hepatitis and hepatoma) and in bone disease and cancer metastatic to bone or liver. On laboratory reports, usually abbreviated as *alk phos* or *ALK PHOS*.

**Allergy test** (AL-er-je test): A small quantity of suspected allergic substance is applied to the skin or injected under the skin, and any reaction is noted.

**Alpha-fetoprotein test** (al-fah-fe-to-PRO-teen): Determination of the presence of a protein called alpha-fetoprotein in serum. The protein normally is present in the serum of the fetus, infant, and pregnant woman. In fetuses with abnormalities of the brain and spinal cord, the protein leaks into the amniotic fluid surrounding the fetus, so it is an indicator of a spinal tube defect (spina bifida) or anencephaly (lack of brain development). High levels are found in patients with cancer of the liver and other malignant diseases (testicular and ovarian cancers). Serum levels monitor the effectiveness of cancer treatment. Elevated levels are also seen in benign liver diseases such as cirrhosis and viral hepatitis. On laboratory reports, usually abbreviated *AFP*.

**Amniocentesis** (am-ne-o-sen-TE-sis): Surgical puncture to remove fluid from the sac (amnion) that surrounds the fetus in the uterus. The fluid contains cells from the fetus that can be examined with a microscope for chromosomal analysis. Levels of chemicals in amniotic fluid also can detect defects in the fetus.

**ANA test:** See ANTINUCLEAR ANTIBODY TEST.

**Angiography** (an-je-OG-rah-fe) or **angiogram** (AN-je-o-gram): X-ray imaging of blood vessels. A contrast substance is injected into a blood vessel (vein or artery), and x-ray images are taken of the vessel. In *cerebral angiography*, x-ray images show blood vessels in the brain. In *coronary angiography*, x-rays detect abnormalities in vessels that bring blood to the heart. Angiograms can detect blockage by clots, cholesterol plaques, tumors, or aneurysms (ballooning or dilating of the vessel wall). Angiography is performed frequently to view arteries and is often used interchangeably with *arteriography*. It is also used to view veins (*venography*), to detect blood clots or pulmonary emboli.

**Antinuclear antibody test** (an-tih-NU-kle-ar AN-tih-bod-e test): A sample of plasma is tested for the presence of antibodies that are found in patients with systemic lupus erythematosus. On laboratory reports, usually abbreviated *ANA*.

**Arteriography** (ar-teer-e-OG-rah-fe) or **arteriogram** (ar-TEER-e-oh-gram): X-ray recording of an artery and its branches after injection of a contrast substance into an artery. *Coronary arteriography* is the visualization of arteries that travel across the outer surface of the heart and bring blood to the heart muscle.

**Arthrocentesis** (ar-thro-sen-TE-sis): Puncture to remove fluid from a joint. This usually is done through the skin with a *percutaneous* needle.

**Arthrography** (arth-ROG-rah-fe): X-ray examination of the inside of a joint with a contrast medium.

**Aspartate transaminase (AST) test:** Measurement of the enzyme *aspartate transaminase* in serum. The enzyme normally is present in blood but accumulates when there is damage to the heart or to liver cells. Formerly called *SGOT*.

**Aspiration** (as-pih-RA-shun): Withdrawal of fluid from a cavity or sac by suction through a needle or tube. The term *aspiration pneumonia* refers to an infection caused by inhalation of food or an object into the lungs.

**Audiometry** (aw-de-OM-eh-tre): Test using sound waves of various frequencies (e.g., 500 Hz), up to 8000 Hz, to quantify the extent and type of hearing loss. An *audiogram* is the record produced by this test.

**Auscultation** (aw-skul-TA-shun): Process of listening for sounds produced within the body. This is most often performed with the aid of a stethoscope to determine the condition of the heart and lungs and blood vessels or to detect the fetal heartbeat.

## B

**Bacterial and fungal tests** (bak-TER-e-al and FUNG-al tests): Samples from skin lesions or other sites (e.g., blood, bone marrow, sputum) are cultured in a laboratory or analyzed microscopically to diagnose bacterial or fungal conditions.

**Barium enema:** See LOWER GASTROINTESTINAL EXAMINATION and BARIUM TESTS.

**Barium swallow:** See ESOPHAGOGRAPHY, BARIUM TESTS, and UPPER GASTROINTESTINAL EXAMINATION.

**Barium tests** (BAH-re-um tests): X-ray examinations with a liquid barium mixture that is swallowed or given by enema to outline the surface of the gastrointestinal tract. These studies may locate disorders in the esophagus (*esophagogram*), duodenum, small intestine (*small bowel follow-through*), or colon (*barium enema*). Taken before or during the examination, barium causes the intestinal tract to stand out in silhouette when viewed through a *fluoroscope* (see FLUOROSCOPY) or seen on an x-ray image. The *barium swallow* is used to examine the upper gastrointestinal tract, and the *barium enema* is for examination of the lower gastrointestinal tract. These tests are complemented by ENDOSCOPY (see page 304).

**Bence Jones protein test** (bens jonz PRO-teen): Measurement of the Bence Jones protein in serum or urine. Bence Jones protein is a fragment of a normal serum protein, an immunoglobulin, produced in greatly excessive amounts by cancerous bone marrow cells (myeloma cells). Normally it is not found in either blood or urine, but in *multiple myeloma* (a malignant condition of bone marrow), high levels of Bence Jones protein may be detected in urine.

**Bilirubin test** (bil-ih-RU-bin): Measurement of the amount of bilirubin, an orange-brown pigment, in serum and urine. Bilirubin is derived from breakdown of hemoglobin, the oxygen-carrying protein in red blood cells. Its presence in high concentration in serum and urine causes *jaundice* (yellow coloration of the skin) and may indicate disease of the liver, obstruction of bile ducts, or a type of anemia due to excessive destruction of red blood cells.

**Biopsy** (BI-op-se): Removal of a piece of tissue from the body for subsequent examination under a microscope. The procedure is performed with a surgical knife or by needle aspiration, or *core biopsy*, or via an endoscopic approach (using a special forceps-like instrument inserted through a hollow flexible tube.) *Excisional biopsy* means that the entire tissue to be examined is removed. An *incisional biopsy* is the removal of only a small amount of tissue, and a *needle* or *core biopsy* indicates that tissue is pierced with a hollow needle and fluid and/or cells are withdrawn by aspiration for microscopic examination.

**Blood chemistry profile:** A comprehensive blood test that is a biochemical examination of various substances in the blood using a computerized laboratory analyzer. Tests include measurements of albumin (liver and kidney), alkaline phosphatase (liver and bone), AST (liver and heart muscle) and ALT (liver), bilirubin (liver), calcium (bones), creatinine (kidney), electrolytes (acid-base balance), globulin (liver and immune disorders), lipids (such as cholesterol and triglycerides), phosphorus (bones), and urea (kidney). Also called *sequential multiple analysis* (SMA). SMA-6, SMA-12, and SMA-18 indicate the number of blood tests performed.

**Blood culture** (blud KUL-chur): Test to determine whether infection is present in the bloodstream. A sample of blood is added to a special medium (food) that promotes the growth of microorganisms. The medium is then examined by a medical technologist for evidence of bacteria or other microbes.

**Blood Differential test** (blud dih-fer-EN-shul): See WHITE BLOOD CELL (WBC) COUNT.

**Blood urea nitrogen (BUN) test** (blud u-RE-ah NI-tro-jen): Measurement of the amount of urea (nitrogen-containing waste material) in serum. A high level of serum urea indicates poor kidney function because it is the kidney's job to remove

urea from the bloodstream and filter it into urine. On laboratory reports, usually abbreviated *BUN*. Urea is a product of the breakdown of proteins.

**Bone density test** (bone DEN-sih-te test): Low-energy x-rays are used for this study, which measures bone thickness and reveals areas of bone deficiency (*osteopenia*) and *osteoporosis* (bones become thinner, more fragile, and likely to break). This study is most often performed on the lower spine or hips. Also called *bone densitometry* or *DEXA* (dual-energy x-ray absorptiometry).

**Bone marrow biopsy** (bone MAH-ro BI-op-se): Removal of a small amount of bone marrow via a needle biopsy. The cells are then examined with a microscope. The liquid content of the marrow cavity is withdrawn by *aspiration* and examined separately from the rest of the biopsy sample. Often the hip bone (iliac crest) is used, and the biopsy is helpful in determining the number and type of blood cells in the bone marrow.

**Bone scan:** A radioactive substance (usually a TECHNETIUM isotope) is injected intravenously, and its uptake in bones is detected with a scanning device. Tumors in bone can be detected by increased uptake of the radioactive material in the areas of the lesions.

**Brain scan:** A radioactive substance is injected intravenously. It collects in any lesion that disturbs the natural barrier that exists between blood vessels and normal brain tissue (blood–brain barrier), allowing the radioactive substance to enter the brain tissue. A scanning device detects the presence of the radioactive substance and thus can identify an area of tumor, abscess, or hematoma. This procedure has largely been replaced by COMPUTED TOMOGRAPHY or MAGNETIC RESONANCE IMAGING.

**Bronchoscopy** (brong-KOS-ko-pe): Visual examination of the bronchial passages through a flexible tube (endoscope) inserted into the airway. The lining of the bronchial tubes can be seen, and tissue may be removed for biopsy. The tube is usually inserted through the mouth or nose but can also be directly inserted into the airway during mediastinoscopy. Sedation is required for this procedure.

## C

**CA-125 test:** Blood test measuring CA-125, a protein released into the bloodstream by ovarian cancer cells. Measurement of CA-125 determines response to treatment.

**Calcium test** (KAL-se-um): Measurement of the amount of calcium in serum, plasma, or whole blood. Low blood levels cause abnormal functioning of nerves and muscles, and high blood levels may be due to loss of calcium from bones, excessive intake of calcium, disease of the parathyroid glands, or cancer. On laboratory reports, usually given as the symbol *Ca*.

**Carbon dioxide test** (KAR-bon di-OK-side): Blood test that measures all forms of carbon dioxide (gas produced by cells and eliminated by the lungs) in blood. On laboratory reports, abbreviated *CO<sub>2</sub>*.

**Carcinoembryonic antigen test** (kar-sih-no-em-bree-ON-ik AN-ti-jen): A plasma test for a protein normally found in the blood of human fetuses and produced in healthy adults in only a very small amount. High levels of this antigen may be a sign of one of a variety of cancers, especially colon or pancreatic cancer. This test monitors the response of patients to cancer treatment. On laboratory reports, usually abbreviated *CEA*.

**Cardiac catheterization** (KAR-de-ak kath-eh-ter-ih-ZA-shun): Procedure in which a catheter (tube) is passed via vein or artery into the chambers of the heart to measure the blood flow out of the heart and the pressures and oxygen content in the heart chambers. Contrast material is also introduced into heart chambers, and x-ray pictures are taken to show heart and heart valve structure.

**Cardiac enzyme tests** (CAR-dee-ak EN-zym tests): Measurements of enzymes released into the bloodstream after a heart attack. Examples are creatine kinase (CK) and troponin I and troponin T.

**Catheterization** (kath-eh-ter-ih-ZA-shun): Introduction of a hollow, flexible tube into a vessel or cavity of the body to withdraw or instill fluids. Catheterization also is used to measure pressure in vessels and to inject contrast material for outlining vessels or heart chambers. Male and female *Foley catheters* are used for urinary catheterization. *Cardiac catheterization* involves insertion of a catheter into a large vein or artery; from there, it is threaded through the circulation system to the heart. Contrast can be administered to visualize blood vessels for diagnosis and treatment procedures.

**Cerebral angiography:** See ANGIOGRAPHY.

**Cerebrospinal fluid (CSF) analysis** (seh-re-bro-SPI-nal FLU-id a-NAL-i-sis): Measurement of cerebrospinal fluid for pressure, protein and sugar content, blood cells, and malignant cells. The fluid also is cultured to detect microorganisms. Chemical tests are performed on specimens of the fluid removed by *lumbar puncture*. Abnormal conditions such as meningitis, tumor involving the spinal canal, and encephalitis are detected by analysis of the spinal fluid. On laboratory reports, usually abbreviated *CSF*.

**Chest x-ray:** An x-ray image of the chest wall, lungs, and heart. It may show infection (as in pneumonia or tuberculosis), emphysema, damage due to occupational exposure (asbestosis), lung tumors, fluid accumulation (PLEURAL EFFUSION), or heart enlargement. Also called *chest film* (or *chest x-ray film*) and *chest radiograph*.

**Cholangiography** (ko-lan-je-OG-rah-fe) or **cholangiogram** (ko-LAN-je-o-gram): X-ray recording or record of bile ducts. Contrast material is given by intravenous injection (*IV cholangiogram*) and collects in the gallbladder and bile ducts. Also, contrast can be introduced (through the skin) using a percutaneously placed needle inserted into an intrahepatic duct (*percutaneous transhepatic cholangiography*). X-ray images of bile ducts are obtained to identify obstructions caused by tumors or stones. This procedure has largely been replaced by COMPUTED TOMOGRAPHY and MAGNETIC RESONANCE IMAGING, and by ULTRASONOGRAPHY for stones.

**Cholesterol tests** (ko-LES-ter-ol): Measurement of the amount of cholesterol (substance found in animal fats and oils, egg yolks, and milk and produced by the

liver) in serum. Normal values for adults are 120 to 200 mg/dL. Levels above 200 mg/dL indicate a need for further testing and efforts to reduce cholesterol level, because high levels are associated with blockage of arteries and heart disease. Blood also is tested for the presence of a lipoprotein substance that is a combination of cholesterol and protein. High levels (optimal level is 60 to 100 mg/dL) of high-density lipoprotein (*HDL*) cholesterol in the blood are beneficial because HDL cholesterol promotes the removal and excretion of excess cholesterol from the blood serum, whereas high levels of low-density lipoprotein (*LDL*) are associated with the development of atherosclerosis (optimal level is 100 mg/dL or less). The ratio of HDL to LDL is most important.

**Chorionic villus sampling** (kor-e-ON-ik VIL-us SAM-pling): Removal of a small piece of placental tissue for microscopic or genetic analysis to detect fetal abnormalities.

**Colonoscopy** (ko-lon-OS-ko-pe): Visual examination of the colon using a flexible tube (endoscope) inserted through the rectum and passed into the large bowel. Biopsy samples may be taken and benign growths, such as polyps, removed through the endoscope. The removal of a polyp is a *polypectomy* (pol-ih-PEK-to-me).

**Colposcopy** (kol-POS-ko-pe): Visual examination of the vagina and cervix through a special microscope inserted into the vagina. The vaginal walls are held apart with a speculum so that all tissues can be viewed.

**Complete blood count (CBC)**: Determination of the numbers of leukocytes (white blood cells), erythrocytes (red blood cells), and platelets (clotting cells). The CBC is useful in diagnosis of anemia, infection, and blood cell disorders, such as leukemia.

**Computed tomography** (kom-PU-ted to-MOG-rah-fe) or **CT** and **CT scan**: X-ray examination that shows images of the body in cross-section. Contrast material may be used (injected into the bloodstream) to highlight structures such as the liver, brain, or blood vessels, and barium can be swallowed to outline gastrointestinal organs. X-ray images, obtained as the x-ray tube rotates (helical CT) around the body, are processed by a computer to show “slices” of body tissues, most often within the head, chest, and abdomen.

**Conization** (ko-nih-ZA-shun): Removal of a cone-shaped sample of uterine cervix tissue. This sample is then examined with a microscope for evidence of cancerous growth. The special shape of the tissue sample allows the pathologist to examine the transitional zone of the cervix, where cancers are most likely to develop.

**Coronary arteriography**: See ARTERIOGRAPHY.

**Creatine kinase test** (KRE-ah-tin KI-nas): Measurement of levels of creatine kinase, a blood enzyme. Creatine kinase (*CK*) is normally found in heart muscle, brain tissue, and skeletal muscle. The presence of one form (*isoenzyme*) of creatine kinase (either CK-MB or CK2) in the blood is strongly indicative of recent myocardial infarction (heart attack) because the enzyme is released from heart muscle when the muscle is damaged or dying.

**Creatinine test** (kre-AT-tih-noon): Measurement of the amount of creatinine, a nitrogen-containing waste material, in serum or plasma. It is the most commonly used test for kidney function. Because creatinine normally is produced as a protein breakdown product in muscle and is excreted by the kidney in urine, an elevation in the creatinine level in the blood indicates abnormal kidney function. Elevations also are seen in patients on high-protein diets and with dehydration.

**Creatinine clearance test** (kre-AT-tih-noon KLEER-ans): Measurement of the rate at which creatinine is cleared (filtered) by the kidneys from the blood. A low creatinine clearance indicates that the kidneys are not functioning effectively to clear creatinine from the bloodstream and filter it into urine.

**Culdocentesis** (kul-do-sen-TE-sis): Surgical puncture to remove fluid from the cul-de-sac (the space between the rectum and the uterus) through a thin, hollow needle inserted through the vagina into this space. The fluid is then analyzed for evidence of cancerous cells, infection, or blood cells.

**Culture** (KUL-chur): Test in which a sample of body fluids (such as urine, blood, sputum) is mixed with or applied to a sterile growth medium, and if present, bacteria, fungi, or viruses are allowed to grow for several days. Microorganisms that grow out are then identified. In *sensitivity* testing, culture plates containing a specific microorganism are prepared and antibiotic-containing disks are applied to the culture surface. After overnight incubation, the area surrounding the disk (where growth was inhibited) is measured to determine whether the antibiotic is effective against the specific organism. Stool samples may also be cultured.

**Cystography** (sis-TOG-rah-fe) or **cystogram** (SIS-to-gram): X-ray recording of the urinary bladder with a contrast medium so that the outline of the urinary bladder can be seen clearly. A contrast substance is injected via catheter into the urethra and urinary bladder, and x-ray images are made. A *voiding cystourethrogram* is an x-ray image of the urinary tract made while the patient is urinating.

**Cystoscopy** (sis-TOS-ko-pe): Visual examination of the urinary bladder through a thin tube or cystoscope (endoscope) inserted into the urethra and then passed into the bladder. This procedure is used to visualize inflammation and tumors of the bladder, to remove stones, and to perform a biopsy of suspicious areas.

## D

**Digital rectal examination** or **DRE** (DIJ-ih-tal REK-tal eks-am-ih-NA-shun): The physician inserts a gloved finger into the patient's rectum to detect rectal cancer and as a primary method to detect prostate cancer. Stool on the removed glove is tested for occult blood, a possible sign of disease.

**Digital subtraction angiography** (DIJ-ih-tal sub-TRAK-shun an-je-OG-rah-fe): A unique x-ray technique for viewing blood vessels by taking two images and subtracting one from the other. Images are first obtained without contrast material and then again after contrast is injected into blood vessels. The first image is then subtracted from the second so that the final image (sharp and precise) shows only contrast-filled blood vessels and not the surrounding tissue.

**Dilation and curettage** or **D&C** (di-LA-shun and kur-eh-TAJ): A series of probes of increasing size are systematically inserted through the vagina into the opening of

the cervix. The cervix is thus dilated (widened) so that a curette (spoon-shaped instrument) can be inserted to remove tissue from the lining of the uterus. The tissue is then examined with a microscope.

**Doppler ultrasound** (DOP-ler UL-trah-sownd): Technique that focuses sound waves on blood vessels and measures blood flow as echoes bounce off red blood cells. Arteries or veins in the arms, neck, legs, or abdomen are examined to detect vessels that are occluded (blocked) by clots or atherosclerosis.

## E

**Echocardiography** (eh-ko-kar-de-OG-rah-fe) or **echocardiogram** (eh-ko-KAR-de-o-gram): Imaging of the heart by introducing high-frequency sound waves through the chest into the heart. The sound waves are reflected back from the heart, and echoes showing heart structure are displayed on a recording machine. It is a highly useful diagnostic tool in the evaluation of diseases of the valves that separate the heart chambers and diseases of the heart muscle.

**Electrocardiography** or **ECG/EKG** (e-lek-tro-kar-de-OG-rah-fe): Connection of electrodes (wires or “leads”) to the body to record electrical impulses from the heart. The *electrocardiogram* is the actual record produced. This test is useful in discovering abnormalities in heart rhythms and for diagnosing heart disorders.

**Electroencephalography** or **EEG** (e-lek-tro-en-sef-ah-LOG-rah-fe): Connection of electrodes (wires or “leads”) to the scalp to record electricity coming from within the brain. The *electroencephalogram* is the actual record produced. This test is useful in the diagnosis and monitoring of epilepsy and in the investigation of neurologic disorders. It also is used to evaluate patients in coma (brain inactivity) and in the study of sleep disorders.

**Electrolyte panel** (e-LEK-tro-lyt PAH-nul): Determination of the concentrations of *electrolytes* (chemical substances capable of conducting an electric current) in serum or whole blood. When dissolved in water, salts, such as sodium chloride, break apart into charged particles (*ions*). The common positively charged electrolytes are *sodium* ( $\text{Na}^+$ ), *potassium* ( $\text{K}^+$ ), *calcium* ( $\text{Ca}^{2+}$ ), and *magnesium* ( $\text{Mg}^{2+}$ ). The common negatively charged electrolytes are *chloride* ( $\text{Cl}^-$ ) and *bicarbonate* ( $\text{HCO}_3^-$ ). These charged particles should be present at all times for proper functioning of cells. An electrolyte imbalance occurs when serum concentration is either too high or too low. Calcium imbalance can affect the bones, kidneys, gastrointestinal tract, and neuromuscular activity, and sodium imbalance will affect blood pressure, nerve functioning, and fluid levels surrounding cells. Potassium ion imbalance impairs heart and muscular activity.

**Electromyography** or **EMG** (e-lek-tro-mi-OG-rah-fe): Recording of the electrical activity of muscle tissue using electrodes attached to the skin or inserted into the muscle. This procedure detects neuromuscular abnormalities.

**Electrophoresis:** See SERUM PROTEIN ELECTROPHORESIS.

**ELISA** (eh-LI-zah): A laboratory assay (test) for the presence of antibodies to abnormal proteins such as tumor antigens or viruses, such as HIV. ELISA is an acronym for *enzyme-linked immunosorbent assay*. It also is known as *EIA* or *enzyme immunoassay*.

**Endoscopic retrograde cholangiopancreatography** or **ERCP** (en-do-SKOP-ik REH-tro-grayd kol-an-je-o-pan-kre-ah-TOG-rah-fe): X-ray recording of the bile ducts, pancreas, and pancreatic duct using radiopaque contrast injected through an endoscope, passed through the mouth, esophagus, and duodenum into the bile and pancreatic ducts, and x-ray images are then obtained.

**Endoscopic ultrasonography** or **E-US** (en-do-SKOP-ik ul-trah-so-NOG-rah-fe): Sound waves are generated from a tube inserted through the mouth and into the esophagus. The sound waves bounce off internal structures and are detected by surface coils. This study can detect enlarged cancerous lymph nodes and tumors in the chest and upper abdomen. This procedure is used for *staging* (evaluation of size and spread) of gastric and esophageal tumors.

**Endoscopy** (en-DOS-ko-pe): Inspection of an organ or body cavity through a narrow, tube-like instrument (endoscope) inserted into the organ or cavity. The endoscope is placed through a natural opening (the mouth or anus) or into a surgical incision, such as through the abdominal wall. Endoscopes contain bundles of glass fibers that carry light (fiberoptic); some instruments are equipped with a small forceps-like device that withdraws a sample of tissue for microscopic study (biopsy). Examples of endoscopy are bronchoscopy, colonoscopy, esophagoscopy, gastroscopy, and laparoscopy.

**Erythrocyte sedimentation rate** (eh-RITH-ro-site sed-ih-men-TA-shun rate): Measurement of the rate at which red blood cells (erythrocytes) in well-mixed venous blood settle to the bottom (sediment) of a test tube. If the rate of sedimentation is markedly rapid (elevated rate), it may indicate inflammatory conditions, such as rheumatoid arthritis, or conditions that produce excessive proteins in the blood. On laboratory reports, usually abbreviated *ESR* or *sed rate*.

**Esophagogastroduodenoscopy** or **EGD** (eh-SOF-ah-go-GAS-tro-du-o-den-NOS-ko-pe): Visual examination of the esophagus, stomach, and first part of the small intestine using an endoscope inserted through the mouth and down the throat.

**Esophagography** (eh-sof-ah-GOG-rah-fe) or **esophagogram** (eh-SOF-ah-go-gram): X-ray recording or record of the esophagus performed after barium sulfate is swallowed. This test is part of a BARIUM SWALLOW and UPPER GASTROINTESTINAL EXAMINATION.

**Esophagoscopy** (eh-sof-ah-GOS-ko-pe): Visual examination of the esophagus performed through an endoscope inserted into the mouth and down the throat. This procedure allows detection of ulcers, tumors, or other lesions.

**Estradiol assay** (es-trah-DI-ol AS-a): Test for the concentration of estradiol, which is the predominant form of estrogen (female hormone) in serum, plasma, or urine.

**Estrogen receptor assay** (ES-tro-jen re-SEP-tor AS-a): Test performed on a breast biopsy specimen to determine whether a sample of tumor contains an estrogen receptor protein. If the protein is present (positive result) on breast cancer cells, this indicates that estrogens can stimulate growth of the tumor. Then treatment with an anti-estrogen drug would retard tumor growth. If the assay result is

negative (the protein is not present), then the tumor cells would not be killed by anti-estrogen drug treatment.

**Excisional biopsy** (ek-SIH-zhin-al BI-op-se): See BIOPSY.

**Exophthalmometry** (eks-of-thal-MOM-eh-tre): Measurement of the extent of protrusion of the eyeball in *exophthalmos*. Exophthalmos may be caused by tumors behind the eye, or by an overactive thyroid gland.

**F**

**Fluorescein angiography** (flur-uh-seen an-je-OG-rah-fe): Fluorescein (a contrast substance) is injected intravenously and the movement of blood is observed by ophthalmoscopy. It is used to detect diabetes or hypertensive retinopathy and also degeneration of the macular (central) area of the retina.

**Fluoroscopy** (flur-OS-ko-pe): An x-ray examination that uses a fluorescent screen rather than a photographic plate to show images of the body in motion. X-rays that have passed through the body strike a screen covered with a fluorescent substance that emits yellow-green light. Internal organs are seen directly (still images are stored either on film or on a computer as digital images) and in motion. Fluoroscopy is used to guide the insertion of catheters and to direct organ biopsy, and may be enhanced with barium ingestion. CT-guided biopsy is used most often now.

**Frozen section** (fro-zen SEK-shun): Technique for (or method of) rapid preparation of a biopsy sample for examination during an actual surgical procedure. Tissue is taken from the operating room to the pathology laboratory and frozen. It is then thinly sliced, stained, and immediately examined with a microscope to determine whether the sample is benign or malignant and to determine the status of margins around a tumor.

**G**

**Gallbladder ultrasound** (GAWL-blah-der UL-trah-sownd): Sound waves are used to visualize gallstones. This procedure has replaced the x-ray test known as cholecystography.

**Gallium scan** (GAL-e-um scan): Radioactive gallium (gallium citrate) is injected into the bloodstream and is detected in the body with a scanning device that produces an image of the areas where gallium collects. Gallium accumulates in sites where cells are dividing, such as certain tumors and areas of inflammation.

**Gastroscopy** (gas-TROS-ko-pe): Visual examination of the stomach through an endoscope inserted down through the esophagus, for either diagnostic inspection or biopsy. When the upper portion of the small intestine is also visualized, the procedure is called *esophagogastroduodenoscopy (EGD)*.

**Glucose test** (GLU-kos test): Measurement of the amount of glucose (sugar) in serum and plasma. High levels of glucose (*hyperglycemia*) indicate the presence of diabetes mellitus. Glucose also is measured in urine, where its presence also usually indicates diabetes mellitus. The *fasting blood sugar test* is measurement of blood sugar after a patient has fasted.

**Glucose tolerance test** (GLU-kos TOL-er-ans test): Test to determine how the body responds to glucose. In the first part of this test, blood and urine samples are taken after the patient has fasted. Then a solution of 100 grams of glucose is given by mouth. Additional blood and urine samples are obtained a half hour after the glucose is taken and again at intervals of up to 2 hours to determine the rate of rise in and then the fall of glucose in the blood. This test will diagnose diabetes mellitus.

**H**

**Hematocrit** (he-MAT-o-krit): Measurement of the percentage blood volume occupied by red blood cells. The normal range is 40% to 50% in males and 37% to 47% in females. A low hematocrit indicates anemia. On laboratory reports, usually abbreviated *Hct* or *HCT*.

**Hemoccult test** (he-mo-KULT test): Examination of small sample of stool for otherwise in apparent occult (hidden) traces of blood. The sample is placed on the surface of a collection kit and reacts with a chemical (e.g., guaiac). A positive result may indicate bleeding from polyps, ulcers, or malignant tumors. This is an important screening test for colon cancer. Also called a STOOL GUAIAIC TEST.

**Hemoglobin assay** (HE-mo-glo-bin AS-a): Measurement of the concentration of hemoglobin (protein that carries oxygen in red blood cells) in blood. The normal blood hemoglobin ranges are 13.0 to 17.0 g/dL in adult males and 12.0 to 15.0 g/dL in adult females. On laboratory reports, usually abbreviated *Hb* (or *hgb* or *Hgb*).

**Holter monitoring** (HOL-ter MON-ih-ter-ing): Electrocardiographic recording of heart activity over an extended period of time. The Holter monitor device is worn by the patient as normal daily activities are performed. It detects heart rhythm abnormalities. Also called *ambulatory electrocardiography*.

**Human chorionic gonadotropin assay** (HU-man kor-e-ON-ik go-nad-o-TRO-pin AS-a): Measurement of the concentration of human chorionic gonadotropin (a hormone secreted by cells of the fetal placenta) in urine. It is detected in urine within days after fertilization of egg and sperm cells and provides the basis of the most commonly used pregnancy test. It also is elevated in patients with certain tumors. On laboratory reports, usually abbreviated *HCG* or *hCG*.

**Hysterosalpingography** (his-ter-o-sal-ping-OG-rah-fe) or **hysterosalpingogram** (his-ter-o-sal-PING-o-gram): X-ray recording (imaging) or record of the uterus and fallopian tubes. Contrast material is inserted through the vagina into the uterus and fallopian tubes, and x-ray images are obtained to detect blockage or tumor.

**Hysteroscopy** (his-ter-OS-ko-pe): Visual examination of the uterus using an endoscope passed through the uterine neck or cervix into the uterus.

**I**

**Immunoassay** (im-u-no-AS-a): A method of testing blood and urine for the concentration of various chemicals, such as hormones, drugs, or proteins. The technique makes use of the immunological reaction between antigens and antibodies. An *assay* is a determination of the amount of any particular substance in fluid or tissue.

**Immunoglobulin test** (im-u-no-GLOB-u-lin test): Measurement (in serum) of proteins (antibodies) that bind to and destroy foreign substances (antigens). Immunoglobulins are made by cells of the immune system.

**Immunohistochemistry** (im-u-no-his-to-KEM-is-tre): An antibody tagged with a fluorescent label or dye is spread over a tissue biopsy specimen and used to detect the presence of a particular antigen produced by the tissue or a tumor or infection.

**Incisional biopsy** (in-SIZH-un-al BI-op-se): See BIOPSY.

**Intravenous pyelography**: See UROGRAPHY.

## K

**Kidneys, ureters, bladder** (KID-nee-z, UR-eh-ter-z, BLAH-der) or **KUB**: X-ray images of the kidney, ureters, and urinary bladder, made without contrast material.

## L

**Laparoscopy** (lap-ah-ROS-ko-pe): Examination of the abdominal cavity through an endoscope inserted into the abdomen. After the patient receives a local anesthetic, a laparoscope is placed through an incision in the abdominal wall. This procedure gives the physician a view of the abdominal cavity, the surface of the liver and spleen, and the pelvic region. Laparoscopy can be used to remove some organs (such as the gallbladder, appendix, and ovary) and tumors and for fallopian tube ligation to prevent pregnancy.

**Laryngoscopy** (lah-rin-GOS-ko-pe): Visual examination of the voice box (larynx) through an endoscope inserted down the trachea (airway). The laryngoscope transmits a magnified image of the larynx through a system of lenses and mirrors. The procedure can reveal tumors and explain changes in the voice. Sputum samples and tissue biopsy specimens are obtained by using brushes or forceps attached to the laryngoscope.

**Lipid tests** (LIP-id tests): Lipids are fatty substances such as cholesterol and triglycerides. See CHOLESTEROL and TRIGLYCERIDE.

**Lipoprotein tests** (li-po-PRO-teen tests): See CHOLESTEROL.

**Liver function tests** (LIV-er FUNG-shun tests): See ALKALINE PHOSPHATASE, BILIRUBIN, ALT, and AST.

**Lower gastrointestinal examination** (LO-wer gas-tro-in-TES-tin-al ek-zam-ih-NA-shun): X-ray pictures of the colon taken after a liquid contrast substance called barium sulfate is inserted through a plastic tube (enema) into the rectum and large intestine (colon). If a tumor is present in the colon, it may appear as an obstruction or irregularity. Also known as a BARIUM ENEMA.

**Lumbar puncture** or **LP** (LUM-bar PUNK-shur): Introduction of a hollow needle into a space surrounding the spinal cord to withdraw fluid for analysis. Contrast material may be injected for imaging. Medicines may be introduced for treating disease involving the central nervous system.

## M

**Magnetic resonance imaging** or **MRI** (mag-NET-ik REZ-o-nans IM-ah-jing): A powerful magnetic field is created surrounding the whole patient, or only the head, and water molecules are aligned and then relaxed, generating electromagnetic currents that provide a detailed picture of organs and blood vessels. A computer produces images of body structures at successive depths (as with CT slices). This procedure is particularly useful for imaging tumors of the brain and spinal cord and abnormalities of the lungs and abdominal and pelvic organs. No x-rays are used, and the study may be performed with intravenous contrast material (gadolinium), depending on the purpose of the evaluation. In *magnetic resonance angiography* (*MRA* or *MR angiography*), blood vessels are examined in key areas of the body such as the brain, kidneys, pelvis, legs, lungs, and heart.

**Mammography** (mah-MOG-rah-fe) or **mammogram** (MAM-o-gram): X-ray recording or record of the breast. X-rays of low voltage are beamed at the breast, and images are produced. Mammography detects abnormalities in breast tissue, such as breast cancer. In *stereotactic breast biopsy*, a hollow needle is passed through the skin into a suspicious lesion with the help of mammographic imaging. Breast tomosynthesis, also called 3D mammography, creates 3-dimensional images of the breast and aids in detection early breast disease.

**Mediastinoscopy** (me-de-ah-stih-NOS-ko-pe): Procedure for viewing structures in the mediastinum through an endoscope inserted into this space (in the chest between the lungs and in front of the heart). A *mediastinoscope* is introduced through a small incision in the neck while the patient is under anesthesia. This procedure is used to biopsy lymph nodes and suspected tumors within the mediastinum.

**MUGA scan** (MUH-gah scan): Test that uses radioactive technetium to measure the rate of cardiac output of blood by a *multiple-gated acquisition* (MUGA) technique. Also called *technetium-99m ventriculography*.

**Muscle biopsy** (MUH-sl BI-op-se): A sample of muscle tissue is removed and analyzed microscopically.

**Myelography** (mi-eh-LOG-rah-fe) or **myelogram** (MI-eh-lo-gram): X-ray recording of the spinal cord after injection of contrast. This procedure has been largely replaced by MRI for detecting tumors or ruptured “slipped” disks between vertebrae (backbones).

## N

**Nasogastric intubation** (na-zo-GAS-trik in-tu-BA-shun): Insertion of a tube through the nose into the stomach to withdraw fluid for analysis or to give nutrition directly into the stomach.

**Needle biopsy** (NE-dl BI-op-se): See BIOPSY.

## O

**Occult blood test:** See HEMOCCULT TEST.

**Ophthalmoscopy** (of-thal-MOS-ko-pe): Visual examination of the eye. A physician uses an *ophthalmoscope* to look directly into the eye, evaluating the optic nerve,

retina, and blood vessels in the back of the eye and the lens in the front of the eye for cataracts. In *fluorescein angiography*, a contrast substance is injected intravenously, and movement of the dye through blood vessels in the back of the eye is observed with ophthalmoscopy.

**Otoscopy** (o-TOS-ko-pe): Visual examination of the interior of the ear. A physician uses an *otoscope* inserted into the ear canal to check for obstructions (e.g., wax), infection, fluid, and eardrum perforation or scarring.

## P

**Palpation** (pal-PA-shun): Examination by touch. This is a technique of manual physical examination by which a doctor feels underlying tissues and organs through the skin.

**Pap smear** (pap smear): Insertion of a cotton swab or wooden spatula into the vagina to obtain a sample of cells from the outer surface of the cervix (neck of the uterus). The cells are then smeared on a glass slide, preserved, and sent to the laboratory for microscopic examination. This test for cervical cancer was developed by and named after the late Dr. George Papanicolaou. Results are graded and reported as negative (no abnormalities) or ranging from mildly abnormal (presence of ASC or abnormal squamous cells) to high-grade squamous intraepithelial lesion (HSIL).

**Paracentesis** (pah-rah-sen-TE-sis): Surgical puncture of the membrane surrounding the abdomen (peritoneum) to remove fluid from the abdominal cavity. Fluid is drained for analysis and to prevent its accumulation in the abdomen. Also known as *abdominocentesis*

**PCR test:** Blood test to find and analyze DNA and RNA in viruses, diagnose genetic diseases, and do DNA fingerprinting. Multiple copies of DNA or RNA are made. PCR stands for *polymerase chain reaction* and can detect very small amounts of RNA or DNA.

**Pelvic exam** (PEL-vik ek-ZAM): Physician inserts fingers into the vagina while keeping the other hand over the abdomen to palpate the uterus and ovaries. This examination checks the uterus and ovaries for enlargement, cysts, tumors, or abnormal bleeding. It is also known as an internal exam or a bimanual exam.

**Percussion** (per-KUSH-un): The technique of striking a part of the body with short, sharp taps of the fingers to determine the size, density, and position of the underlying parts by the sound obtained. Percussion is commonly used over the lungs to detect fluid, atelectasis, and infection, and on the abdomen to examine the liver.

**Phlebotomy** (feh-BOT-o-me): Puncture of a vein to remove samples of blood for analysis. Also called *venipuncture*.

**PKU test:** Test that determines whether the urine of a newborn baby contains substances called *phenylketones*. If these ketones are present, the baby is diagnosed with a condition called *phenylketonuria (PKU)*. PKU affects infants who lack a specific enzyme. When the enzyme is missing, high levels of *phenylalanine* (an amino acid) accumulate in the blood, affecting the infant's brain and causing mental retardation. This situation is prevented by placing the infant on a special diet that prevents accumulation of phenylalanine in the bloodstream.

**Platelet count** (PLAYT-let kownt): Determination of the number of clotting cells (platelets) in a sample of blood.

**Positron emission tomography** or **PET scan** (POZ-ih-tron e-MISH-un to-MOG-rah-fe scan): A radioactive substance (usually an isotope incorporated into a sugar-like molecule) that releases radioactive particles called positrons is injected and travels to specialized areas of the body. Because of the way in which the positrons are released, cross-sectional color pictures can be made showing the location of the radioactive substance. The most common use for PET scans is to detect cancer and examine the effects of cancer therapy by showing biochemical changes in tumors. Tumors pick up the radioactive substance (isotope) and appear as "hot spots" (areas of high glucose uptake) on the film. Also, PET scans can be performed on the heart to assess blood flow to heart muscle and to evaluate patients for coronary artery disease. PET scans of the brain are used to evaluate patients with memory disorders, seizure disorders, and brain tumors. Metabolically active parts of the brain appear as hot spots. *PET-CT* scans combine PET and CT imaging technology to aid localization of "hot" areas.

**Potassium test** (po-TAS-e-um test): Measurement of the concentration of potassium in serum. Potassium is an important chemical for regulating electrical currents and maintaining the cell membrane charge. Muscle and nerve function depends on movement of potassium and other electrolytes across the cell membrane. On laboratory reports, usually given as the symbol  $K^+$ . See also ELECTROLYTES.

**Pregnancy test** (PREG-nan-se test): Measurement in blood or urine of *human chorionic gonadotropin*, or hCG, a hormone secreted by the placenta early in pregnancy.

**Proctosigmoidoscopy** (prok-to-sig-moy-DOS-ko-pe): Examination of the first 10 to 12 inches of the rectum and colon using an endoscope inserted through the anus. When the sigmoid colon is visualized with a longer (20-inch) flexible endoscope, the procedure is called *sigmoidoscopy*. The procedure detects polyps, malignant tumors, and sources of bleeding.

**Progesterone receptor assay** (pro-JES-teh-rone re-SEP-tor AS-a): Test to determine whether a sample of tumor contains a progesterone receptor protein. A positive test result identifies that a breast cancer tumor would be responsive to antihormone therapy.

**Prostate-specific antigen (PSA) test** (PROS-tat speh-SIH-fic AN-tih-jen): Blood test that measures the amount of an antigen elevated in patients with prostatic cancer and in some with an inflamed prostate gland. On laboratory reports, usually abbreviated *PSA*.

**Protein electrophoresis:** See SERUM PROTEIN ELECTROPHORESIS.

**Prothrombin time** (pro-THROM-bin time): Measurement of the activity of factors in the blood that participate in clotting. Deficiency of any of these factors can lead to a prolonged prothrombin time and difficulty in blood clotting. The test is important as a monitor for patients taking anticoagulants, substances that block the activity of blood clotting factors but increase the risk of bleeding.

**Pulmonary angiography** (PUL-mo-nair-e an-je-OG-rah-fe): X-ray images of blood vessels of the lung are obtained after injection of contrast. This procedure has been largely replaced by COMPUTED TOMOGRAPHY of the lung.

**Pulmonary function test** (PUL-mo-nair-e FUNG-shun test): Measurement of the volume and flow rate (ventilation) of air taken into and exhaled from the lungs by means of an instrument called a *spirometer*. Test results may be abnormal in patients with asthma, chronic bronchitis, emphysema, or occupational exposures to asbestos, chemicals, and dusts.

**Pulmonary perfusion scan** (PUL-mo-nair-e per-FU-shun scan): Radioactive particles are injected intravenously and travel rapidly to areas of the lung that are adequately filled with blood. Regions of obstructed blood flow caused by tumor, blood clot, swelling, and inflammation can be seen as nonradioactive areas on the scan.

**Pulmonary ventilation scan** (PUL-mo-nair-e ven-tih-LA-shun scan): Radioactive gas is inhaled, and a special camera detects its presence in the lungs. The scan is used to detect lung segments that fail to fill with the radioactive gas. Lack of filling is usually due to diseases that obstruct the bronchial tubes and air sacs. This scan is also used in the evaluation of lung function before surgery.

**Pyelography** or **pyelogram**: See UROGRAPHY.

## R

**Red blood cell (RBC) count**: Test in which the number of erythrocytes in a sample of blood is counted. A low RBC count may indicate anemia. A high count can indicate *polycythemia vera*.

**Rheumatoid factor assay** (ROO-mah-toyd FAK-tor AS-a): Detection of the abnormal protein *rheumatoid factor* in the serum. This factor is found in patients with rheumatoid arthritis and some other autoimmune diseases.

## S

**Semen analysis** (SE-men ah-NAL-ih-sis): Microscopic examination of sperm cells to detect number, viability, and motility of sperm cells.

**Serum enzyme tests** (SE-rum EN-zym tests): see CARDIAC ENZYME TESTS.

**Serum protein electrophoresis test** (SE-rum PRO-teen e-lek-tro-for-E-sis test): A procedure that separates proteins through their migration in an electric current. The material tested, such as serum, containing various proteins, is placed on gel or in liquid, and under the influence of an electric current, the proteins separate (-PHORESIS means separation) so that they can be identified and measured. The procedure is also known as *protein electrophoresis*.

**Sigmoidoscopy** (sig-moy-DOS-ko-pe): See PROCTOSIGMOIDOSCOPY.

**Skin biopsy** (skin BI-op-se): Procedure in which samples of skin lesions are removed and sent to the pathology laboratory for microscopic examination.

**Skin tests:** Tests in which substances are applied to the skin or injected under the skin and the reaction of immune cells in the skin is observed. These tests detect the patient's sensitivity to substances such as dust or pollen. They also can indicate whether the person has been exposed to the bacteria that cause tuberculosis or diphtheria.

**Slit-lamp microscopy** (slit-lamp mi-KROS-ko-pe): Examination of the anterior eye structures (such as the cornea) using an instrument that projects intense light through a narrow opening for optimal visualization.

**SMA:** See BLOOD CHEMISTRY PROFILE.

**Small bowel follow-through:** See BARIUM TESTS and UPPER GASTROINTESTINAL EXAMINATION.

**Sodium level:** Measurement of the concentration of sodium ( $\text{Na}^+$ ) in serum. Sodium is one of the most important elements in the body. It is the chief *electrolyte* in fluid outside cells, and it exchanges with potassium within cells during muscle contraction or nerve conduction. Excess sodium is excreted by the kidneys, and sodium is thus involved in water (fluid) balance and acid-base chemical balance during muscle contraction or nerve conduction.

**Sonography:** See ULTRASONOGRAPHY.

**Sputum test** (SPU-tum test): Examination of mucus coughed up from the patient's lungs to detect tumor or infection. The sputum is examined microscopically, analyzed chemically, and cultured for the presence of microorganisms.

**Stool culture** (stool KUL-chur): Stool (feces) is placed in a growth medium (culture) and analyzed microscopically for evidence of microorganisms (bacteria).

**Stool guaiac test** (stool GWI-ak test): See HEMOCCULT TEST.

**Stress test:** Electrocardiography performed during exercise. With intense exercise, the ECG may become abnormal as a result of poor blood flow through blocked arteries. This study may reveal hidden heart disease or confirm the cause of cardiac signs and symptoms.

## T

**Technetium Tc-99m sestamibi scan** (tek-NE-she-um Tc-99m ses-tah-MIH-be scan): Sestamibi, tagged with technetium-99, is injected, and the radioactivity is not taken up in areas of decreased blood flow (ischemia). This procedure can be used with an *exercise tolerance test (ETT-MIBI)* to help define areas of poor blood flow to the heart muscle.

**Thallium-201 scintigraphy** (THAL-e-um-201 sin-TIH-grah-fe): Thallium-201 is injected into a vein, and images of blood flow through the heart muscle are recorded. Cold spots correlate with areas of myocardial infarction. *Sestamibi scans* also are used to assess the status of blood flow through heart muscle during an *exercise tolerance test (ETT-MIBI)*. It also is useful in localizing disease of the parathyroid glands.

**Thoracentesis** (thor-ah-sen-TE-sis): Insertion of a needle into the chest to remove fluid from the space surrounding the lungs (pleural cavity). After injection of a local anesthetic, a hollow needle is placed through the skin and muscles of the back and into the space between the lungs and chest wall. Fluid is then withdrawn by applying suction. Excess fluid (*pleural effusion*) may be a sign of infection, heart failure, or malignant disease. This procedure is used to diagnose conditions, to drain a pleural effusion, or to re-expand a collapsed lung (*atelectasis*). This procedure can also be used to drain fluid (pleural effusion) from the pleural cavity.

**Thoracoscopy** (thor-ah-KOS-ko-pe): Visual examination of the surface of the lungs using an endoscope inserted through an incision in the chest. *VATS* is *video-assisted thoracoscopy* (or *thorascopy*).

**Thyroid function tests** (THI-royd FUNG-shun tests): Tests that measure the levels of thyroid hormones, such as *thyroxine* (T4) and *triiodothyronine* (T3), in serum. *Thyroid-stimulating hormone* (TSH), which is produced by the pituitary gland and stimulates the release of T4 and T3 from the thyroid gland, is also measured in serum. These tests diagnose hypothyroidism and hyperthyroidism, and are helpful in monitoring response to thyroid treatment.

**Thyroid scan and uptake** (THI-royd scan and UP-take): In a thyroid scan, radioactive iodine (the radiotracer) is injected intravenously or swallowed and then collects in the thyroid gland. A scanning device (probe) detects the radiotracer in the gland tissue, producing an image that shows the size, shape, and position of the thyroid. The thyroid uptake test, or *radioactive iodine uptake* (RAIU) test, evaluates the function of the thyroid. Radioactive iodine is swallowed, and a probe is placed over the thyroid gland to detect increased or decreased activity, as shown by the thyroid's ability to absorb the radiotracer. This test also can be used to detect areas of poor uptake (cold nodules), which may be cancerous.

**Tomography** (to-MOG-rah-fe) or **tomogram** (TO-mo-gram): X-ray recording or record that shows an organ in depth. Several pictures ("slices") are taken of an organ by moving the x-ray tube and film in sequence to blur out certain regions and bring others into sharper focus. Tomograms of the kidney and lung are examples.

**Triglycerides test** (tri-GLIS-er-ides test): Determination of the amount of triglycerides (fatty substances) in the serum. Elevated triglyceride levels (normal is 150 to 200 mg/dL) are considered to be an important risk factor for the development of heart disease.

**Troponin test** (tro-PO-nin): Measurement of levels of proteins *troponin I* and *troponin T* in blood is used to indicate the presence and degree of myocardial injury, as from a heart attack.

**Tuning fork tests** (TOO-ning fork tests): Procedure in which a vibration source (tuning fork) is placed in front of the opening to the ear to test air conduction of sound waves. The tuning fork is also placed on the mastoid bone behind the ear to test bone conduction of sound waves.

**Tuberculin test** (too-BUR-ku-lin tests): Agents are applied to the skin with punctures or injection and the reaction is noted. Redness and swelling result in people sensitive to the test substance and indicate previous or current infection with tuberculosis.

## U

**Ultrasonography** (ul-trah-so-NOG-rah-fe) or **ultrasound imaging** (UL-trah-sownd IM-a-jing): Images are produced by beaming high-frequency sound waves (not x-rays) into the body and capturing the echoes that bounce off organs. These echoes are then processed to produce an image showing the difference between fluid and solid masses and the general position of organs. Because ultrasound images are captured in real time, they can show structure and movement of internal organs, as well as blood flowing through blood vessels. Ultrasonography is particularly useful for detecting gallstones, fibroid tumors of the uterus and ovarian tumors and cysts (*pelvic ultrasonography*), enlargement of the heart or defects in heart valves (*echocardiography*), blood flow through major arteries and veins (*Doppler ultrasound*), and enlargement of lymph nodes in the abdomen and chest. Also called *sonography*.

**Upper gastrointestinal examination** (UP-er gas-tro-in-TES-tin-al ek-zam-ih-NA-shun): X-ray pictures are taken of the esophagus (BARIUM SWALLOW), duodenum, and small intestine after a liquid contrast substance (barium sulfate) is swallowed. In a *small bowel follow-through*, pictures are taken at increasing time intervals to follow the progress of barium through the small intestine. Identification of obstructions or ulcers is possible.

**Uric acid test** (UR-ik AS-id test): Measurement of the amount of uric acid (a nitrogen-containing waste material from breakdown of DNA and RNA) in the serum. High serum levels are associated with a type of arthritis called *gout*. In gout, uric acid accumulates as crystals in joints and in tissues. High levels of uric acid may also cause kidney stones.

**Urinalysis** (u-rih-NAL-ih-sis): Examination of urine as an aid in the diagnosis of disease. Routine urinalysis involves the observation of unusual color or odor; determination of specific gravity (amount of materials dissolved in urine); chemical tests (for protein, sugar, acetone); and microscopic examination for bacteria, blood cells, and sediment. Urinalysis is used to detect abnormal functioning of the kidneys and bladder, infections, and diabetes mellitus. On laboratory reports, usually abbreviated *UA*.

**Urography** (u-ROG-rah-fe) or **urogram** (U-ro-gram): X-ray recording (imaging) of the kidney and urinary tract. If x-ray pictures are taken after contrast material is injected intravenously, the procedure is called *intravenous urography* (*descending or excretion urography*) or *intravenous pyelography* (*IVP*). If x-ray pictures are taken after introduction of contrast directly into the bladder through the urethra, the study is called a *cystogram*. If contrast flows up the ureters into the kidneys, the procedure is called *retrograde urography* or *retrograde pyelography*. PYEL/O means renal pelvis (the collecting chamber of the kidney).

## V

**Venography** (ve-NOG-rah-fe): X-ray examination of veins performed after contrast material is injected into veins. It is used to detect *deep vein thrombosis*, *pulmonary emboli*, or *venous insufficiency*.

**Ventilation-perfusion scan** or **V/Q scan**: Nuclear medicine test that uses radioactive materials (radiopharmaceuticals) to examine air flow (ventilation) and blood flow (perfusion) in the lungs. The purpose of this scan is find evidence of a blood clot (pulmonary embolism) in the lungs. Scans are performed together. If ventilation occurs in a segment that is not perfused, the mismatch implies a pulmonary embolism. When the scans match, abnormalities may reflect pneumonia or other lung disease.

**Viral load test for HIV**: Measures the number of viral particles in the blood. It is used to determine the effectiveness of antiviral treatment.

**Voiding cystourethrogram** (voy-ding sis-to-u-RE-thro-gram) or **VCUG**: X-ray films of the bladder and urethra taken after the bladder is filled with a contrast material and while the patient is expelling urine.

## W

**Western blot** (WES-tern blot): Test used to detect infection by *HIV* (the AIDS virus). It is more specific than the ELISA. A patient's serum is mixed with purified proteins from HIV, and the reaction is examined. If the patient has made antibodies to HIV, those antibodies react with the purified HIV proteins, and the test result is positive.

**White blood cell (WBC) count**: Determination of the number of leukocytes in the blood. Higher-than-normal counts can indicate the presence of infection or leukemia. A *differential* (differential count) is the percentages of different types of white blood cells (neutrophils, eosinophils, basophils, lymphocytes, and monocytes) in a sample of blood. It gives more specific information about leukocytes and aids in the diagnosis of infection, allergic diseases, disorders of the immune system, and various forms of leukemia.

<b>Abbreviations</b> .....	<b>318</b>
<b>Acronyms</b> .....	<b>329</b>
<b>Symbols</b> .....	<b>330</b>
<b>Eponyms</b> .....	<b>331</b>

## ABBREVIATIONS

### A

<b>AB</b>	abortion
<b>Ab</b>	antibody
<b>ABC</b>	aspiration, biopsy, cytology
<b>abd</b>	abdomen
<b>ABG</b>	arterial blood gas
<b>a.c., ac</b>	before meals ( <i>ante cibum</i> )
<b>ACE</b>	angiotensin-converting enzyme (ACE inhibitors treat hypertension)
<b>ACL</b>	anterior cruciate ligament (of knee)
<b>ACS</b>	acute coronary syndrome (myocardial infarction, unstable angina)
<b>ACTH</b>	adrenocorticotrophic hormone (secreted by the pituitary gland)
<b>AD</b>	Alzheimer disease
<b>ADD</b>	attention deficit disorder
<b>ADH</b>	antidiuretic hormone (secreted by the pituitary gland)
<b>ADHD</b>	attention deficit/hyperactivity disorder
<b>ad lib</b>	freely as desired ( <i>ad libitum</i> )
<b>AED</b>	automated external defibrillator
<b>AICD</b>	automatic implantable cardioverter-defibrillator
<b>AIDS</b>	acquired immunodeficiency syndrome
<b>alb</b>	albumin (protein)
<b>ALL</b>	acute lymphocytic leukemia
<b>alk phos</b>	alkaline phosphatase (enzyme elevated in liver disease)
<b>ALS</b>	amyotrophic lateral sclerosis (Lou Gehrig disease)
<b>ALT</b>	alanine transaminase (enzyme elevated in liver disease); formerly called SGPT
<b>AMI</b>	acute myocardial infarction
<b>AML</b>	acute myelocytic (myelogenous) leukemia
<b>ANA</b>	antinuclear antibody; test for rheumatoid arthritis
<b>AP or A/P</b>	anteroposterior (front to back)
<b>A&amp;P</b>	auscultation and percussion
<b>aq</b>	water ( <i>aqua</i> )
<b>ARDS</b>	acute respiratory distress syndrome
<b>AS</b>	aortic stenosis
<b>ASD</b>	atrial septal defect
<b>ASHD</b>	arteriosclerotic heart disease
<b>AST</b>	aspartate transaminase (elevated in liver and heart disease); formerly called SGOT
<b>AV</b>	arteriovenous; atrioventricular
<b>A&amp;W</b>	alive and well

### B

<b>BE</b>	barium enema
<b>B cells</b>	white blood cells (lymphocytes) produced in bone marrow
<b>b.i.d., bid</b>	twice a day ( <i>bis in die</i> )
<b>BM</b>	bowel movement; bone marrow
<b>BMT</b>	bone marrow transplant
<b>BP, B/P</b>	blood pressure
<b>BPH</b>	benign prostatic hypertrophy (hyperplasia)

<b>Bronch</b>	bronchoscopy
<b>bs</b>	blood sugar; bowel sounds; breath sounds
<b>BSE</b>	breast self-examination
<b>BSO</b>	bilateral salpingo-oophorectomy
<b>BUN</b>	blood urea nitrogen (test of kidney function)
<b>BW</b>	birth weight
<b>Bx, bx</b>	biopsy

## C

<b>c̄</b>	with ( <i>cum</i> )
<b>C1, C2</b>	first cervical vertebra, second cervical vertebra
<b>CA</b>	cancer; carcinoma; cardiac arrest; chronologic age
<b>Ca</b>	calcium
<b>CABG</b>	coronary artery bypass graft
<b>CAD</b>	coronary artery disease
<b>CAPD</b>	continuous ambulatory peritoneal dialysis
<b>cap</b>	capsule
<b>cath</b>	catheter; catheterization
<b>CBC</b>	complete blood count
<b>cc</b>	cubic centimeter (1 cc equals 1/1000 liter, or 1 mL)
<b>CC</b>	chief complaint
<b>CCU</b>	coronary care unit; critical care unit
<b>CF</b>	cystic fibrosis
<b>Chemo</b>	chemotherapy
<b>CHF</b>	congestive heart failure
<b>Chol</b>	cholesterol
<b>CIN</b>	cervical intraepithelial neoplasia
<b>CIS</b>	carcinoma in situ
<b>CKD</b>	chronic kidney disease
<b>cm</b>	centimeter (1 cm is 1/100 meter)
<b>CLL</b>	chronic lymphocytic leukemia
<b>CML</b>	chronic myelocytic (myelogenous) leukemia
<b>CNS</b>	central nervous system
<b>c/o</b>	complains of
<b>CO<sub>2</sub></b>	carbon dioxide
<b>COPD</b>	chronic obstructive pulmonary disease
<b>CP</b>	cerebral palsy; chest pain
<b>CPAP</b>	continuous positive airway pressure (provided by machine to aid breathing in patients with sleep apnea)
<b>CPD</b>	cephalopelvic disproportion
<b>CPR</b>	cardiopulmonary resuscitation
<b>C&amp;S, C+S</b>	culture and sensitivity (testing)
<b>C-section, CS</b>	cesarean section
<b>CSF</b>	cerebrospinal fluid
<b>CT scan</b>	computed tomography scan (x-ray images in cross-sectional view)
<b>CVA</b>	cerebrovascular accident (stroke)
<b>c/w</b>	compare with; consistent with
<b>CX, CXR</b>	chest x-ray (image)
<b>Cx</b>	cervix
<b>cysto</b>	cystoscopy

**D**

<b>D&amp;C</b>	dilation (dilatation) and curettage (of the uterine lining)
<b>DES</b>	diethylstilbestrol (estrogen causing defects in children whose mothers took the drug during pregnancy)
<b>DEXA (DXA)</b>	dual-energy x-ray absorptiometry
<b>DIC</b>	disseminated intravascular coagulation
<b>diff.</b>	differential (percentages of types of white blood cells)
<b>DJD</b>	degenerative joint disease
<b>DKA</b>	diabetic ketoacidosis
<b>DM</b>	diabetes mellitus
<b>DNA</b>	deoxyribonucleic acid
<b>DNR</b>	do not resuscitate
<b>DOB</b>	date of birth
<b>DOE</b>	dyspnea on exertion
<b>DOMS</b>	delayed-onset muscle soreness
<b>DRE</b>	digital rectal examination
<b>DT</b>	delirium tremens (caused by alcohol withdrawal)
<b>DTR</b>	deep tendon reflex
<b>DUB</b>	dysfunctional uterine bleeding
<b>DVT</b>	deep vein thrombosis
<b>Dx</b>	diagnosis

**E**

<b>EBV</b>	Epstein-Barr virus (cause of mononucleosis)
<b>ECC</b>	emergency cardiac care
<b>ECG</b>	electrocardiography
<b>ECHO</b>	echocardiography
<b>ECMO</b>	extracorporeal membrane oxygenator
<b>ECT</b>	electroconvulsive therapy
<b>ED</b>	emergency department; erectile dysfunction
<b>EDD</b>	expected date of delivery
<b>EEG</b>	electroencephalography
<b>EENT</b>	eyes, ears, nose, throat
<b>EGD</b>	esophagogastroduodenoscopy
<b>EKG</b>	electrocardiography ( <i>ECG</i> is preferred)
<b>ELISA</b>	enzyme-linked immunosorbent assay (e.g., used as an AIDS test)
<b>EMG</b>	electromyography
<b>ENT</b>	ears, nose, throat
<b>eos.</b>	eosinophils (type of white blood cell)
<b>ER</b>	emergency room; estrogen receptor
<b>ERCP</b>	endoscopic retrograde cholangiopancreatography
<b>ESR</b>	erythrocyte sedimentation rate; see <i>sed rate</i>
<b>ESRD</b>	end-stage renal disease
<b>ESWL</b>	extracorporeal shock wave lithotripsy
<b>ET</b>	endotracheal
<b>ETOH</b>	ethyl alcohol (ethanol)
<b>ETT</b>	exercise tolerance test; endotracheal tube

**F**

<b>FBS</b>	fasting blood sugar
<b>FDA</b>	U.S. Food and Drug Administration
<b>FDG-PET</b>	fluorodeoxyglucose positron emission tomography (nuclear medicine test)
<b>Fe</b>	iron
<b>FEV</b>	forced expiratory volume
<b>FH</b>	family history
<b>FHR</b>	fetal heart rate
<b>FSH</b>	follicle-stimulating hormone (secreted by the pituitary gland)
<b>F/U, f/u</b>	follow-up
<b>FUO</b>	fever of unknown (undetermined) origin
<b>Fx</b>	fracture

**G**

<b>G</b>	gravida (a pregnant woman)
<b>g, gm</b>	gram
<b>Ga</b>	gallium (element used in nuclear medicine diagnostic tests)
<b>GB</b>	gallbladder
<b>GC</b>	gonococcus (bacterial cause of gonorrhea; another name for <i>Neisseria gonorrhoeae</i> )
<b>Gd</b>	gadolinium (widely used MRI contrast agent)
<b>GERD</b>	gastroesophageal reflux disease
<b>GH</b>	growth hormone (secreted by the pituitary gland)
<b>GI</b>	gastrointestinal
<b>Grav. 1, 2, 3</b>	gravida—a woman who has had a first, second, or third pregnancy of any duration
<b>GFR</b>	glomerular filtration rate
<b>gt, gtt</b>	drop, drops
<b>GTT</b>	glucose tolerance test
<b>GU</b>	genitourinary
<b>GVHD</b>	graft-versus-host disease
<b>Gy</b>	gray (unit of irradiation)
<b>GYN, gyn</b>	gynecology

**H**

<b>H</b>	hydrogen
<b>h, hr</b>	hour
<b>HAART</b>	highly active antiretroviral therapy (for AIDS)
<b>Hb, hgb, Hgb</b>	hemoglobin
<b>HbA1c</b>	glycosylated hemoglobin (measured to test for diabetes)
<b>HBV</b>	hepatitis B virus
<b>HCG, hCG</b>	human chorionic gonadotropin (secreted during pregnancy)
<b>Hct, HCT</b>	hematocrit
<b>HCV</b>	hepatitis C virus
<b>HD</b>	hemodialysis (performed by artificial kidney machine); heart disease
<b>HDL</b>	high-density lipoprotein (associated with decreased incidence of coronary artery disease)

<b>HEENT</b>	head, ears, eyes, nose, throat
<b>Hg</b>	mercury
<b>Hgb, hgb, Hb</b>	hemoglobin
<b>HIPAA</b>	Health Insurance Portability and Accountability Act (of 1996)
<b>HIV</b>	human immunodeficiency virus
<b>h/o</b>	history of
<b>H<sub>2</sub>O</b>	water
<b>H&amp;P</b>	history and physical (examination)
<b>HPV</b>	human papillomavirus
<b>HRT</b>	hormone replacement therapy
<b>h.s.</b>	at bedtime ( <i>hora somni</i> ); write out so as not to confuse with hs (half strength)
<b>HSG</b>	hysterosalpingography
<b>HSV-1, HSV-2</b>	herpes simplex virus type 1, type 2
<b>HTN</b>	hypertension (high blood pressure)
<b>Hx</b>	History

**I**

<b>I</b>	iodine
<b><sup>131</sup>I</b>	radioactive isotope of iodine
<b>I&amp;D</b>	incision and drainage
<b>IBD</b>	inflammatory bowel disease (ulcerative colitis and Crohn disease)
<b>IBS</b>	irritable bowel syndrome (of unknown etiology)
<b>ICD</b>	implantable cardioverter-defibrillator
<b>ICU</b>	intensive care unit
<b>ID</b>	infectious disease
<b>IgA, IgD, IgE, IgG, IgM</b>	immunoglobulins (antibodies)
<b>IM</b>	intramuscular; infectious mononucleosis
<b>INH</b>	isoniazid (drug to treat tuberculosis)
<b>INR</b>	international normalized ratio (system for reporting results of blood coagulation tests)
<b>I&amp;O</b>	intake and output (measurement of patient's fluids)
<b>IOL</b>	intraocular lens (implant)
<b>IUD</b>	intrauterine device (contraceptive)
<b>IV</b>	intravenous
<b>IVF</b>	<i>in vitro</i> fertilization
<b>IVP</b>	intravenous pyelography; intravenous push

**K**

<b>K</b>	potassium
<b>kg</b>	kilogram (1 kg is 1000 grams)
<b>KS</b>	Kaposi sarcoma (malignant lesion associated with AIDS)
<b>KUB</b>	kidneys, ureters, bladder (x-ray study without contrast)

**L**

<b>L, l</b>	left; liter; lower
<b>L1, L2</b>	first lumbar vertebra, second lumbar vertebra

<b>LA</b>	left atrium
<b>LAD</b>	left anterior descending artery (of the heart); lymphadenopathy
<b>lat</b>	lateral
<b>LBP</b>	low back pain; low blood pressure
<b>LDH</b>	lactate dehydrogenase (elevations associated with heart attacks)
<b>LDL</b>	low-density lipoprotein (high levels associated with heart disease)
<b>LE</b>	lupus erythematosus
<b>LEEP</b>	loop electrocautery excision procedure
<b>LES</b>	lower esophageal sphincter
<b>LFTs</b>	liver function tests
<b>LLQ</b>	left lower quadrant (of the abdomen)
<b>LMP</b>	last menstrual period
<b>LP</b>	lumbar puncture
<b>LPN</b>	licensed practical nurse
<b>LTB</b>	laryngotracheal bronchitis (croup)
<b>LUQ</b>	left upper quadrant (of the abdomen)
<b>LV</b>	left ventricle
<b>LVAD</b>	left ventricular assist device (bridge to cardiac transplantation)
<b>L&amp;W</b>	living and well
<b>lymphs</b>	lymphocytes
<b>lytes</b>	electrolytes

**M**

<b>m</b>	meter; milli (one thousandth)
<b>MAC</b>	monitored anesthesia care
<b>MCH</b>	mean corpuscular hemoglobin (amount in each red blood cell)
<b>MCHC</b>	mean corpuscular hemoglobin concentration (amount per unit of blood)
<b>MCV</b>	mean corpuscular volume (size of individual red blood cell)
<b>MD, M.D.</b>	doctor of medicine; muscular dystrophy
<b>MDI</b>	metered-dose inhaler
<b>MDS</b>	myelodysplastic syndrome (a bone marrow disorder)
<b>metas</b>	metastases
<b>mg</b>	milligram (1 mg is 1/1000 gram)
<b>Mg</b>	magnesium
<b>MH</b>	marital history; mental health
<b>MI</b>	myocardial infarction (heart attack)
<b>mL</b>	milliliter (1 mL is 1/1000 liter)
<b>mm</b>	millimeter (1 mm is 1/1000 meter)
<b>mm Hg</b>	millimeters of mercury (units for measurement of blood pressure)
<b>mono</b>	monocytes (type of white blood cell)
<b>MRA</b>	magnetic resonance angiography
<b>MRI</b>	magnetic resonance imaging
<b>MRSA</b>	methicillin-resistant <i>Staphylococcus aureus</i>
<b>MS</b>	mental status; mitral stenosis; multiple sclerosis
<b>MSW</b>	medical social worker
<b>MTD</b>	maximum tolerated dose
<b>MVP</b>	mitral valve prolapse
<b>myop</b>	myopia (nearsightedness)

**N**

<b>N</b>	nitrogen
<b>Na</b>	sodium
<b>NB</b>	newborn
<b>NED</b>	no evidence of disease
<b>NG tube</b>	nasogastric tube
<b>NICU</b>	neonatal intensive care unit
<b>NKA</b>	no known allergies
<b>NPO</b>	nothing by mouth ( <i>nil per os</i> )
<b>NSAID</b>	nonsteroidal anti-inflammatory drug
<b>NSR</b>	normal sinus rhythm (of the heart)
<b>NT</b>	not tender (to touch)
<b>NTP</b>	normal temperature and pressure
<b>N+V</b>	nausea and vomiting

**O**

<b>O<sub>2</sub></b>	oxygen
<b>OA</b>	osteoarthritis
<b>OB</b>	obstetrics
<b>OD</b>	doctor of optometry
<b>OR</b>	operating room
<b>ORIF</b>	open reduction plus internal fixation (to set a broken bone)
<b>ORTH, ortho.</b>	orthopedics <i>or</i> orthopaedics
<b>os</b>	mouth
<b>OSA</b>	obstructive sleep apnea
<b>OT</b>	occupational therapy
<b>OV</b>	office visit

**P**

<b>p̄</b>	after; following
<b>P</b>	phosphorus; plan; posterior; pressure; pulse; pupil
<b>PA</b>	posteroanterior (back to front); pulmonary artery
<b>PAC</b>	premature atrial contraction
<b>PaCO<sub>2</sub>, PaCO<sub>2</sub></b>	arterial pressure of carbon dioxide in the blood; may also be written “arterial PCO <sub>2</sub> ”
<b>PACS</b>	picture archival communications system
<b>palp</b>	palpable; palpation (examine by touch)
<b>PaO<sub>2</sub>, PaO<sub>2</sub></b>	arterial pressure of oxygen in the blood; may also be written “arterial PO <sub>2</sub> ”
<b>Pap smear</b>	Papanicolaou smear (preparation of cells from the cervix and vagina for microscopic examination)
<b>para</b>	paracentesis (abdominocentesis)
<b>Para 1, 2, 3</b>	Woman who has produced one, two, or three viable offspring; unipara, bipara, tripara
<b>p.c., pc</b>	after meals ( <i>post cibum</i> )
<b>PCI</b>	percutaneous coronary intervention
<b>PCP</b>	Pneumocystis pneumonia (opportunistic infection seen in patients with AIDS)

<b>PE</b>	physical examination; pulmonary embolus
<b>PEEP</b>	positive end-expiratory pressure
<b>per</b>	by
<b>PERRLA</b>	pupils equal, round, reactive to light and accommodation
<b>PET</b>	positron emission tomography
<b>PE tube</b>	pressure-equalizing tube (ventilating tube for the eardrum)
<b>PFT</b>	pulmonary function test
<b>pH</b>	hydrogen ion concentration (measurement of acidity or alkalinity of a solution)
<b>PH</b>	past history
<b>PI</b>	present illness
<b>PID</b>	pelvic inflammatory disease
<b>PKU</b>	phenylketonuria (disease due to lack of an enzyme in infants)
<b>PM</b>	afternoon ( <i>post meridiem</i> ); postmortem
<b>PMH</b>	past medical history
<b>PMS</b>	premenstrual syndrome
<b>PND</b>	paroxysmal nocturnal dyspnea; postnasal drip
<b>p/o</b>	postoperative
<b>p.o., po</b>	by mouth ( <i>per os</i> )
<b>polys</b>	polymorphonuclear leukocytes (neutrophils)
<b>poplit</b>	popliteal (behind the knee)
<b>post-op</b>	after operation
<b>PP</b>	after meals ( <i>postprandial</i> ); after birth ( <i>postpartum</i> )
<b>PPD</b>	purified protein derivative (skin test for tuberculosis)
<b>pre-op</b>	before operation (preoperative)
<b>prep</b>	prepare for
<b>p.r.n., prn</b>	as needed ( <i>pro re nata</i> )
<b>procto</b>	proctoscopy (visual examination of the anus and rectum)
<b>pro time</b>	prothrombin time (test of blood clotting)
<b>PSA</b>	prostate-specific antigen (screening test for prostate cancer)
<b>pt</b>	patient
<b>PT</b>	physical therapy; prothrombin time
<b>PTA</b>	prior to admission (to hospital)
<b>PTCA</b>	percutaneous transluminal coronary angioplasty (balloon angioplasty)
<b>PTH</b>	parathyroid hormone
<b>PTR</b>	patient to return
<b>PTSD</b>	post-traumatic stress disorder
<b>PTT</b>	partial thromboplastin time (test of blood clotting)
<b>PVC</b>	premature ventricular contraction (abnormal heart rhythm)
<b>PVD</b>	peripheral vascular disease
<b>PVT</b>	paroxysmal ventricular tachycardia
<b>PWB</b>	partial weight bearing
<b>Px</b>	prognosis

## Q

<b>q</b>	every ( <i>quaque</i> )
<b>q.d.</b>	each (every) day ( <i>quaque die</i> ); better to write out “each day,” because can be misread as q.i.d.
<b>q.h.</b>	each (every) hour ( <i>quaque hora</i> )
<b>q2h</b>	each (every) two hours ( <i>quaque secunda hora</i> )
<b>q.i.d.</b>	four times a day ( <i>quater in die</i> )

<b>q.n.</b>	each (every) night ( <i>quaque nox</i> )
<b>q.n.s.</b>	quantity not sufficient ( <i>quantum non sufficit</i> )
<b>q.s.</b>	quantity sufficient ( <i>quantum sufficit</i> )
<b>qt</b>	quart

**R**

<b>R, r</b>	respiration; right
<b>RA</b>	rheumatoid arthritis; right atrium
<b>rad</b>	radiation absorbed dose
<b>RBC, rbc</b>	red blood cell (count)
<b>REM</b>	rapid eye movement
<b>RIA</b>	radioimmunoassay (minute quantities are measured)
<b>RLQ</b>	right lower quadrant (of the abdomen)
<b>R/O, r/o</b>	rule out
<b>ROM</b>	range of motion
<b>ROS</b>	review of systems; reactive species
<b>RP</b>	retrograde pyelography (urography)
<b>RR</b>	recovery room; respiration rate
<b>RRR</b>	regular rate and rhythm (of the heart)
<b>RT</b>	radiation therapy; radiologic technologist; respiratory therapist
<b>RUQ</b>	right upper quadrant (of the abdomen)
<b>RV</b>	right ventricle (of the heart)
<b>Rx</b>	treatment; therapy; prescription ( <i>recipe</i> , “to take”)

**S**

$\bar{s}$	without ( <i>sine</i> )
<b>S1, S2</b>	first sacral vertebra, second sacral vertebra
<b>S-A node</b>	sinoatrial node (pacemaker of the heart)
<b>SAD</b>	seasonal affective disorder
<b>SARS</b>	severe acute respiratory syndrome
<b>SBFT</b>	small bowel follow-through (x-ray study of the small intestine with contrast)
<b>sed rate</b>	erythrocyte sedimentation rate (time it takes red blood cells to settle out of blood)
<b>segs</b>	segmented white blood cells (granulocytes)
<b>SERM</b>	selective estrogen receptor modulator (tamoxifen is an example)
<b>s.gl.</b>	without glasses
<b>SGOT</b>	see <i>AST</i>
<b>SGPT</b>	see <i>ALT</i>
<b>SH</b>	serum hepatitis; social history
<b>sig.</b>	“let it be labeled” (directions or medical instructions)
<b>SIDS</b>	sudden infant death syndrome
<b>SIRS</b>	systemic inflammatory response syndrome (severe bacteremia)
<b>SLE</b>	systemic lupus erythematosus
<b>SMA-12</b>	blood chemistry profile including 12 different studies or assays (sequential <i>multiple analysis</i> )
<b>SOAP</b>	subjective (symptoms perceived by the patient) data, objective (exam findings) data, assessment (evaluation of condition), plan (goals for treatment)

<b>SOB</b>	shortness of breath
<b>S/P, s/p</b>	status post (previous disease condition)
<b>SPECT</b>	single-photon emission computed tomography
<b>sp. gr.</b>	specific gravity
<b>SSRI</b>	selective serotonin reuptake inhibitor (antidepressant drug)
<b>staph</b>	staphylococci (bacteria)
<b>STAT, stat</b>	immediately ( <i>statim</i> )
<b>STD</b>	sexually transmitted disease (older name for STI)
<b>STI</b>	sexually transmitted infection
<b>strep</b>	streptococci (bacteria)
<b>sub-Q</b>	subcutaneous (under the skin)
<b>Sx</b>	signs and symptoms
<b>Sz</b>	seizure

**T**

<b>T</b>	temperature; time
<b>T1, T2</b>	first thoracic vertebra, second thoracic vertebra
<b>T3</b>	triiodothyronine (thyroid gland hormone)
<b>T4</b>	thyroxine (thyroid gland hormone)
<b>T&amp;A</b>	tonsillectomy and adenoidectomy
<b>tab</b>	tablet
<b>TAB</b>	therapeutic abortion
<b>TAH-BSO</b>	total abdominal hysterectomy–bilateral salpingo-oophorectomy
<b>TB</b>	tuberculosis
<b>T cells</b>	lymphocytes originating in the thymus gland
<b>TEE</b>	transesophageal echocardiography
<b>TENS</b>	transcutaneous electrical nerve stimulator
<b>TFT</b>	thyroid function test
<b>THR</b>	total hip replacement
<b>TIA</b>	transient ischemic attack
<b>t.i.d., tid</b>	three times a day ( <i>tris in die</i> )
<b>TLC</b>	total lung capacity
<b>TM</b>	tympanic membrane
<b>TMJ</b>	temporomandibular joint
<b>TNM</b>	tumor-node-metastasis (staging system for cancer)
<b>TPN</b>	total parenteral nutrition (administration of IV solution to maintain nutrition)
<b>TPR</b>	temperature, pulse, respiration
<b>TSH</b>	thyroid-stimulating hormone (secreted by the pituitary gland)
<b>TTE</b>	transthoracic echocardiography
<b>TUR, TURP</b>	transurethral resection of the prostate gland
<b>TVH</b>	total vaginal hysterectomy
<b>Tx</b>	treatment

**U**

<b>UA, U/A</b>	urinalysis
<b>UE</b>	upper extremity
<b>UGI</b>	upper gastrointestinal
<b>umb</b>	navel (umbilical cord region)
<b>ung</b>	ointment

<b>U/O</b>	urine output
<b>URI</b>	upper respiratory infection
<b>U/S, u/s</b>	ultrasound (imaging examination)
<b>UTI</b>	urinary tract infection
<b>UV</b>	ultraviolet

**V**

<b>VA</b>	visual acuity
<b>VATS</b>	video-assisted thoracoscopy
<b>VC</b>	vital capacity (of lungs)
<b>VCUG</b>	voiding cystourethrogram
<b>VEGF</b>	vascular endothelial growth factor
<b>VF</b>	visual field; ventricular fibrillation
<b>Vfib</b>	ventricular fibrillation
<b>VS, V/S</b>	vital signs; versus
<b>VSD</b>	ventricular septal defect
<b>VSS</b>	vital signs stable
<b>V tach, VT</b>	ventricular tachycardia (abnormal heart rhythm)

**W**

<b>WBC, wbc</b>	white blood cell (count)
<b>W/C</b>	wheelchair
<b>wd</b>	wound
<b>WDWN</b>	well-developed and well-nourished
<b>WNL</b>	within normal limits
<b>WT, wt</b>	weight
<b>w/u</b>	workup

**X**

<b>XRT</b>	radiation therapy
------------	-------------------

**Y**

<b>y, yr</b>	year(s)
<b>y/o</b>	year(s) old

## ACRONYMS\*

An *acronym* is the name for an abbreviation that forms a pronounceable “word.”

<b>ACE</b> (ace)	angiotensin- <b>con</b> verting <b>enz</b> yme
<b>AIDS</b> (aydz)	acquired <b>imm</b> une <b>def</b> iciency <b>synd</b> rome
<b>Apgar</b> (apgahr)	<b>a</b> ppearance, <b>p</b> ulse, <b>g</b> rimace, <b>a</b> ctivity, <b>r</b> espiration (letters spell out name of originator of scoring system, Virginia Apgar)
<b>BUN</b> (bun)	<b>b</b> lood <b>urea</b> <b>n</b> itrogen
<b>CABG</b> (cabbage)	coronary <b>a</b> rtery <b>b</b> ypass <b>g</b> raft (grafting)
<b>CAT</b> (cat)	computerized <b>a</b> xial <b>t</b> omography (older name for CT)
<b>CPAP</b> (seepap)	continuous <b>p</b> ositive <b>a</b> irway <b>p</b> ressure
<b>ELISA</b> (eliza)	<b>e</b> nzyme- <b>l</b> inked <b>i</b> mmunosorbent <b>a</b> ssay
<b>GERD</b> (gird)	<b>g</b> astroesophageal <b>r</b> eflux <b>d</b> isease
<b>HAART</b> (heart)	<b>h</b> ighly <b>a</b> ctive <b>a</b> ntiretroviral <b>t</b> herapy
<b>HIPAA</b> (hippah)	<b>H</b> ealth <b>I</b> nsurance <b>P</b> ortability and <b>A</b> ccountability <b>A</b> ct of 1996
<b>LASER</b> (layzer)	light <b>a</b> mplification by <b>s</b> timulated <b>e</b> mission of <b>r</b> adiation
<b>LASIK</b> (laysick)	<b>l</b> aser <b>i</b> n <b>s</b> itu <b>k</b> eratomileusis
<b>LEEP</b> (leap)	loop <b>e</b> lectrocautery <b>e</b> xcision <b>p</b> rocedure
<b>MAC</b> (mack)	<b>m</b> onitored <b>a</b> nesthesia <b>c</b> are
<b>MICU</b> (mickyou)	<b>m</b> edical <b>i</b> ntensive <b>c</b> are <b>u</b> nit
<b>MIS</b> (miss)	<b>m</b> inimally <b>i</b> nvasive <b>s</b> urgery
<b>MODS</b> (modz)	<b>m</b> ultiorgan <b>d</b> ysfunction <b>s</b> yndrome
<b>MUGA</b> (muh-guh)	<b>m</b> ultiple- <b>g</b> ated <b>a</b> cquisition (scan)
<b>NICU</b> (nickyou)	<b>n</b> eonatal <b>i</b> ntensive <b>c</b> are <b>u</b> nit
<b>NSAID</b> (ensayd)	<b>n</b> onsteroidal <b>a</b> nti- <b>i</b> nflammatory <b>d</b> rug
<b>PACS</b> (packs)	<b>p</b> icture <b>a</b> rchival <b>c</b> ommunications <b>s</b> ystem
<b>PALS</b> (pals)	<b>p</b> ediatric <b>a</b> dvanced <b>l</b> ife <b>s</b> upport
<b>PEEP</b> (peep)	<b>p</b> ositive <b>e</b> nd- <b>e</b> xpiratory <b>p</b> ressure
<b>PEG</b> (peg)	<b>p</b> ercutaneous <b>e</b> ndoscopic <b>g</b> astrostomy
<b>PERRLA</b> (perlah)	<b>p</b> upils <b>e</b> qual, <b>r</b> ound, <b>r</b> eactive to <b>l</b> ight and <b>a</b> ccommodation
<b>PET</b> (pet)	<b>p</b> ositron <b>e</b> mission <b>t</b> omography
<b>PICC</b> (pick)	<b>p</b> eripherally <b>i</b> nserted <b>c</b> entral <b>c</b> atheter
<b>PICU</b> (pickyou)	<b>p</b> ediatric <b>i</b> ntensive <b>c</b> are <b>u</b> nit
<b>PIP</b> (pip)	<b>p</b> roximal <b>i</b> nter <b>p</b> halangeal (joint)
<b>pixel</b> (picksul)	<b>p</b> icture <b>e</b> lement
<b>PUVA</b> (poovah)	<b>p</b> сорalen <b>u</b> ltraviolet <b>A</b>
<b>REM</b> (rem)	<b>r</b> apid <b>e</b> ye <b>m</b> ovement
<b>SAD</b> (sad)	<b>s</b> easonal <b>a</b> ffective <b>d</b> isorder
<b>SARS</b> (sarz)	<b>s</b> evere <b>a</b> cute <b>r</b> espiratory <b>s</b> yndrome
<b>SERM</b> (serm)	<b>s</b> elective <b>e</b> strogen <b>r</b> eceptor <b>m</b> odulator
<b>SICU</b> (sickyou)	<b>s</b> urgical <b>i</b> ntensive <b>c</b> are <b>u</b> nit
<b>SIDS</b> (sidz)	<b>s</b> udden <b>i</b> nfant <b>d</b> eath <b>s</b> yndrome

\*Modified from Chabner D-E: *The Language of Medicine*, ed 11, Philadelphia, 2017, Elsevier.

<b>SIRS</b> (sirz)	systemic <b>i</b> nflammatory <b>r</b> esponse <b>s</b> yndrome
<b>SMAC</b> (smack)	sequential <b>m</b> ultiple <b>a</b> nalyzer <b>c</b> omputer (for blood testing)
<b>SOAP</b> (soap)	subjective, <b>o</b> bjective, <b>a</b> ssessment, <b>p</b> lan (formatted approach to nursing care)
<b>SPECT</b> (spekt)	single- <b>p</b> hoton <b>e</b> mission <b>c</b> omputed <b>t</b> omography
<b>SPORE</b> (spore)	specialized <b>p</b> rogram of <b>r</b> esearch <b>e</b> xcellence
<b>TENS</b> (tenz)	transcutaneous <b>e</b> lectrical <b>n</b> erve <b>s</b> timulation
<b>TRUS</b> (truss)	transrectal <b>u</b> ltrasound
<b>TURP</b> (turp)	transurethral <b>r</b> esection of the <b>p</b> rostate
<b>VATS</b> (vatz)	video- <b>a</b> ssisted <b>t</b> horacoscopy
<b>voxel</b> (vocksul)	<b>v</b> olume <b>e</b> lement (of CT scan)

## SYMBOLS\*

=	equals
≠	does not equal
+	positive
-	negative
↑	above, increase
↓	below, decrease
♀	female
♂	male
→	to (in the direction of)
>	is greater than
<	is less than
1°	first-degree (burn, heart block); primary
2°	second-degree (burn, heart block); secondary
3	dram
%	percent
°	degree; hour
:	ratio ("is to")
±	plus or minus (either positive or negative)
'	foot
"	inch
∴	therefore
@	at, each
c̄	with ( <i>cum</i> )
s̄	without ( <i>sine</i> )
#	pound; number
≈	approximately, about
Δ	change, change in
<b>p</b>	short arm of a chromosome
<b>q</b>	long arm of a chromosome

\*Modified from Chabner D-E: *The Language of Medicine*, ed 10, Philadelphia, 2014, Elsevier.

## EPONYMS

### **Achilles tendon**

(Achilles, Greek mythologic hero)

This tendon connects the calf muscles to the heel. It lies at the only part of Achilles' body that was still vulnerable after his mother dipped him as an infant into the river Styx, when she held him by the heel.

### **Alzheimer disease**

(Alois Alzheimer, German neurologist, 1864-1915)

Progressive mental deterioration marked by confusion, memory failure, and disorientation.

### **Apgar score**

(Virginia Apgar, American anesthesiologist, 1909-1974)

Evaluation of an infant's physical condition, usually performed 1 minute and then 5 minutes after birth. Highest score is 10. An Apgar rating of 9/10 is a score of 9 at 1 minute and 10 at 5 minutes.

### **Asperger syndrome**

(Hans Asperger, Austrian psychiatrist, 1906-1980)

Developmental disorder characterized by impairment of social interactions (resembling autism) but lacking in delays in language development and mental functioning.

### **Bell palsy**

(Charles Bell, Scottish surgeon, 1774-1842)

Unilateral (one-sided) paralysis of the facial nerve.

### **Barlow syndrome**

(John Barlow, South African cardiologist, born 1924)

Mitral valve prolapse.

### **Barrett esophagus**

(Norman Barrett, Australian thoracic surgeon, 1903-1979)

Abnormal changes in the lining of the esophagus, resulting from acid reflux from the stomach.

### **Burkitt lymphoma**

(Denis Burkitt, English surgeon in Africa, 1911-1993)

Malignant tumor of lymph nodes; chiefly seen in central Africa. The Epstein-Barr virus is associated with this lymphoma.

### **Cheyne-Stokes respiration**

(John Cheyne, Scottish physician, 1777-1836; William Stokes, Irish physician, 1804-1878)

Abnormal pattern of breathing with alternating periods of stoppage of breathing and deep, rapid breathing.

### **Colles fracture**

(Abraham Colles, Irish surgeon, 1773-1843)

Break (fracture) of the radius (bone near the wrist).

### **Crohn disease**

(Burrill B. Crohn, American physician, 1884-1983)

Chronic inflammatory bowel disease of unknown origin; usually affecting the ileum (last part of the small intestine), colon, or any part of the gastrointestinal tract.

**Cushing syndrome**

(Harvey W. Cushing, American surgeon, 1869-1939)

Disorder resulting from chronic, excessive production of cortisol from the adrenal cortex. It can also result from administration of glucocorticoids (cortisone) in large doses for long periods of time.

**Duchenne muscular dystrophy**

(Guillaume Benjamin Amand Duchenne, French neurologist, 1806-1875)

Abnormal, inherited condition that infants are born with; marked by progressive hardening of muscles in the leg and hips (pelvis).

**Epstein-Barr virus**

(Michael A. Epstein, English pathologist, born 1921; Yvonne M. Barr, English virologist, born 1932)

The herpesvirus that causes infectious mononucleosis and is associated with malignant conditions such as nose and throat cancer, Burkitt lymphoma, and Hodgkin lymphoma.

**eustachian tube**

(Bartolomeo Eustachio, Italian anatomist, 1524-1574)

A tube that joins the throat and the middle ear cavity.

**Ewing sarcoma**

(James Ewing, American pathologist, 1866-1943)

Malignant tumor that develops from bone marrow, usually in long bones or the hip (pelvis).

**fallopian tube**

(Gabriele Falloppio, Italian anatomist, 1523-1562)

One of a pair of tubes or ducts leading from the ovary to the upper portion of the uterus.

**Foley catheter**

(Frederic Foley, American physician, 1891-1966)

Rubber tube that is placed in the urethra to provide drainage of urine.

**Giardia**

(Alfred Giardia, French biologist, 1846-1908)

One-celled organism (protozoan) that causes gastrointestinal infection with diarrhea, abdominal cramps, and weight loss. Cause of infection usually is fecally contaminated water.

**Hodgkin lymphoma**

(Thomas Hodgkin, English physician, 1798-1866)

Malignant tumor of the lymph nodes.

**Horner syndrome**

(Johann Friedrich Horner, Swiss ophthalmologist, 1831-1886)

Partial ptosis (prolapse or drooping) of the upper eyelid, along with other signs of damage to nerves controlling the eye muscles and face.

**Huntington disease**

(George S. Huntington, American physician, 1851-1916)

Rare, hereditary condition marked by chronic, progressively worsening dance-like movements (chorea) and mental deterioration, resulting in dementia.

**Kaposi sarcoma**

(Moricz Kaposi, Austrian dermatologist, 1837-1902)

Malignant neoplasm of cells that line blood and lymph vessels. Soft brownish or purple papules appear on the skin. The tumor can metastasize to lymph nodes and internal organs. It often is associated with AIDS.

**Marfan syndrome**

(Bernard-Jean A. Marfan, French pediatrician, 1858-1942)

Hereditary condition that affects bones, muscles, the cardiovascular system (leading to aneurysms) and eyes (lens dislocation). Affected people have long, “spidery” extremities, underdeveloped muscles, and easily movable joints.

**Meniere disease**

(Prosper Meniere, French physician, 1799-1862)

Chronic disease of the inner ear with recurrent episodes of dizziness (vertigo), hearing loss, and ringing in the ears (tinnitus).

***Neisseria gonorrhoeae***

(Albert L. S. Neisser, Polish dermatologist, 1855-1916)

A type of bacterium that causes gonorrhea (sexually transmitted infection).

**Paget disease**

(James Paget, English surgeon, 1814-1899)

Disease of bone, often affecting middle-aged or elderly people; marked by bone destruction and poor bone repair.

**Pap test**

(George Papanicolaou, Greek physician in the United States, 1883-1962)

Method of examining stained cells obtained from the cervix and vagina. It is a common way to detect cervical cancer.

**Parkinson disease**

(James Parkinson, English physician, 1755-1824)

Slowly progressive degenerative neurological disorder marked by tremors, mask-like facial appearance, shuffling gait (manner of walking), and muscle rigidity and weakness.

**Raynaud phenomenon**

(Maurice Raynaud, French physician, 1834-1881)

Intermittent attacks of loss of blood flow (ischemia) in the extremities of the body (fingers, toes, ears, and nose). Episodes most often are caused by exposure to cold.

**Reye syndrome**

(R. Douglas Reye, Austrian pathologist, 1912-1978)

Acute brain disease (encephalopathy) and disease of internal organs following an acute viral infection.

**Rinne test**

(Heinrich A. Rinne, German otologist, 1819-1868)

Hearing test using a vibrating tuning fork placed against a bone behind the patient’s ear (mastoid bone).

**Rorschach test**

(Herman Rorschach, Swiss psychiatrist, 1884-1922)

Personality test based on a patient's interpretation of 10 inkblots.

**Salmonella**

(Daniel E. Salmon, American pathologist, 1850-1914)

Type of bacterium (rod-shaped) that causes typhoid fever and types of gastroenteritis (inflammation of the stomach and intestines).

**Shigella**

(Kiyoshi Shiga, Japanese bacteriologist, 1870-1957)

Type of bacterium that causes severe infectious gastroenteritis (inflammation of stomach and intestines) and dysentery (diarrhea, abdominal pain, and fever).

**Sjögren syndrome**

(Heinrik S.C. Sjögren, Swedish ophthalmologist, 1899-1986)

Abnormal dryness of the mouth, eyes, and mucous membranes, caused by deficient fluid production. It is a disorder of the immune system.

**Snellen test**

(Herman Snellen, Dutch ophthalmologist, 1834-1908)

Test of visual clarity (acuity) using a special chart. Letters, numbers, or symbols are arranged on the chart in decreasing size from top to bottom.

**Tay-Sachs disease**

(Warren Tay, English ophthalmologist, 1843-1927; Bernard Sachs, American neurologist, 1858-1944)

Inherited disorder of nerve degeneration caused by deficiency of an enzyme. Most affected children die between the ages of 2 and 4 years.

**Tourette syndrome**

(George Gilles de la Tourette, French neurologist, 1857-1927)

Condition marked by abnormal facial grimaces, inappropriate speech, involuntary movements (tics) of eyes, arms, and shoulders.

**von Willebrand disease**

(Erick A. von Willebrand, Finnish physician, 1870-1949)

Inherited blood disorder marked by abnormally slow blood clotting; caused by deficiency in a blood clotting factor (factor VIII).

**Weber tuning fork test**

(Hermann D. Weber, English physician, 1823-1918)

Test of hearing by placing the stem of vibrating tuning fork in the center of the person's forehead.

**Whipple procedure**

(Allen O. Whipple, American surgeon, 1881-1963)

Surgical to remove a portion of the pancreas and the stomach and the entire first part of the small intestine (duodenum). Used in the treatment of pancreatic cancer and other conditions.

**Wilms tumor**

(Max Wilms, German surgeon, 1867-1918)

Malignant tumor of the kidney occurring in young children.

# **Quick Drug Reference**

## Top 50 Prescribed Medications

Rank	Generic Name	Brand Name	Use
1.	Levothyroxine	Synthroid®	Thyroid hormone to treat low thyroid condition
2.	Hydrocodone/APAP	Vicodin®	Pain relief
3.	Amoxicillin	Amoxil®	Antibiotic; treats bacterial infection
4.	Lisinopril	Prinivil®	Treats high blood pressure; ACE inhibitor
5.	Esomeprazole	Nexium®	Treats acid reflux in treatment of GERD
6.	Atorvastatin	Lipitor®	Lowers cholesterol levels
7.	Simvastatin		Lowers cholesterol levels
8.	Clopidogrel	Plavix®	Antiplatelet; prevents platelets from clumping together and forming blood clots
9.	Montelukast	Singulair®	Reduces wheezing and shortness of breath (asthma attacks)
10.	Rosuvastatin	Crestor®	Lowers cholesterol levels
11.	Metoprolol	Lopressor®	Treats abnormal heart rhythms and high blood pressure; beta blocker
12.	Escitalopram	Lexapro®	Antidepressant
13.	Azithromycin	Zithromax®	Antibiotic; treats bacterial infections
14.	Albuterol	ProAir® HFA	Asthma inhaler
15.	Hydrochlorothiazide HCTZ		Diuretic; increases production of urine (water pill)
16.	Metformin	Glucophage®	Antidiabetic; reduces blood sugar in type 2 diabetes
17.	Sertraline	Zoloft®	Antidepressant
18.	Ibuprofen	Advil®	NSAID; reduces inflammation and pain
19.	Zolpidem	Ambien®	Treats insomnia (difficulty sleeping)
20.	Furosemide	Lasix®	Diuretic; increases production of urine (water pill)
21.	Omeprazole	Prilosec®	Treats acid reflux in treatment of GERD
22.	Trazodone	Desyrel®	Antidepressant
23.	Valsartan	Diovan®	A2RB; treats high blood pressure
24.	Tramadol	Ultram®	Pain relief
25.	Duloxetine	Cymbalta®	Antidepressant
26.	Warfarin	Coumadin®	Blood thinner; treats blood clots (anticoagulant)
27.	Amlodipine	Norvasc®	Calcium channel blocker; treats high blood pressure

Rank	Generic Name	Brand Name	Use
28.	Oxycodone/APAP	Percocet®	Pain relief
29.	Quetiapine	Seroquel®	Antipsychotic; treats severe mental disorders
30.	Promethazine	Phenergan®	Antihistamine; treats allergy symptoms
31.	Fluticasone	Flonase®	Nasal spray for allergy relief
32.	Alprazolam	Xanax®	Antianxiety
33.	Clonazepam	Klonopin®	Antianxiety
34.	Benazepril	Lotensin®	Treats high blood pressure; ACE inhibitor
35.	Meloxicam	Mobic®	NSAID; reduces inflammation and pain
36.	Citalopram	Celexa®	Antidepressant
37.	Cephalexin	Keflex®	Antibiotic; treats bacterial infection
38.	Tiotropium	Spiriva®	Inhaler medicine to open airways treats and improve breathing in COPD
39.	Gabapentin	Neurontin®	Treats seizures (epilepsy) and nerve pain
40.	Aripiprazole	Abilify®	Antipsychotic; treats severe mental disorders
41.	Potassium	K-Tab®	Treats low levels of potassium (important electrolyte)
42.	Cyclobenzaprine	Flexeril®	Muscle relaxant
43.	Methylprednisolone	Medrol®	Corticosteroid drug to reduce inflammation
44.	Methylphenidate	Concerta®	Stimulant medication to treat ADHD
45.	Loratadine	Claritin®	Allergy relief
46.	Carvedilol	Coreg®	Treats heart failure (CHF)
47.	Carisoprodol	Soma®	Muscle relaxant
48.	Digoxin	Lanoxin®	Treats heart failure (CHF)
49.	Memantine	Namenda®	Treats Alzheimer disease
50.	Atenolol	Tenormin®	Treats abnormal heart rhythms and high blood pressure; beta blocker

**Abbreviations:**

A2RB = Angiotensin 2 Receptor Blocker

ACE = Angiotensin-Converting Enzyme

ADHD = Attention-Deficit Hyperactivity Disorder

APAP = Acetaminophen ®

CHF = Congestive Heart Failure

COPD = Chronic Obstructive Pulmonary Disease

GERD = Gastroesophageal Reflux Disease

HCTZ = Hydrochlorothiazide

HFA = Hydrofluoroalkane—type of inhaler

NSAID: Nonsteroidal Anti-inflammatory Drug

**APPENDIX 5**

# **Allied Health Careers**

Title/Description	Education Requirements	Certification or Licensure Requirements	National Association or Additional Information
<p><b>Audiologist</b> Works with people who have hearing problems by using testing devices to measure hearing loss.</p>	<p>Clinical doctoral degree—Doctor of Audiology (AuD) graduate degree, including 9 to 12 months of clinical experience.</p>	<p>In addition to complying with state license requirements (which may include requirement for teaching certification for a particular practice setting), ASHA offers Certification of Clinical Competency in Audiology (CCC-A).</p>	<p>American Speech-Language-Hearing Association (ASHA) 1080 Rockville Pike Rockville, MD 20852 800-498-2071</p> <p>American Academy of Audiology (AAA) 11730 Plaza America Dr., Suite 300 Reston, VA 20190 800-AAA-2336</p>
<p><b>Blood bank technologist</b> Collects, types, and prepares blood and its components for transfusions and laboratory tests.</p>	<p>Baccalaureate degree in clinical laboratory science or other physical science degree, plus a 12-month program in blood bank technology. Some programs also offer master's degrees.</p>	<p>Certification through Board of Registry of the American Society of Clinical Pathologists (ASCP) (<a href="http://www.ascp.org">www.ascp.org</a>).</p>	<p>American Association of Blood Banks (AABB) 8101 Glenbrook Road Bethesda, MD 20814 301-215-6482</p>
<p><b>Chiropractor</b> Treats health problems associated with the muscular, nervous, and skeletal systems, especially the spine.</p>	<p>College degree plus 4 years of resident instruction in a college of chiropractics.</p>	<p>Must pass the National State Board Exam.</p>	<p>American Chiropractic Association (ACA) Public Information Department 1702 Clarendon Blvd. Arlington, VA 22209 703-276-8880</p>
<p><b>Clinical laboratory technologist (CLT)</b> (also see <i>Medical laboratory technologist</i>) (CLT, CLS, MLT, MLS) Performs tests to examine and analyze body fluids, tissues and cells.</p>	<p>2-year associate's degree or 12-month certificate program.</p>	<p>Certification available through the following: Board of Registry of the American Society for Clinical Pathology, American Medical Technologists Association, the National Credentialing Agency for Laboratory Personnel, and Board of Registry of the American Association of Bioanalysts.</p>	<p>American Medical Technologists Association (AMTA) 710 Higgins Road Park Ridge, IL 60068 847-823-5169</p>

Title/Description	Education Requirements	Certification or Licensure Requirements	National Association or Additional Information
<p><b>Dental assistant</b> Assists a dentist with dental procedures.</p>	<p>Typically, 9- to 11-month program at a community college, vocational school, or career school. It is also possible to work as a dental assistant without attending a program and learn on the job.</p>	<p>In most states, certification is optional. Person is eligible to take exam if a graduate of an accredited dental assisting program or has 2 years of work experience. Exam for Certified Dental Assistant (CDA) is administered by the American Dental Assistants Association.</p>	<p>American Dental Assistants Association (ADAA) 35 E. Wacker Dr., Suite 1730 Chicago, IL 60601 312-541-1550</p>
<p><b>Dental hygienist</b> Provides preventive dental care and teaches the practice of good oral hygiene.</p>	<p>2-year associate's degree or 4-year baccalaureate degree.</p>	<p>State requirements vary. In most states, the person must graduate from an accredited dental hygiene program, pass the state-authorized licensure exam, and pass the comprehensive written exam. On passing the exam, the dental hygienist becomes a Registered Dental Hygienist (RDH).</p>	<p>American Dental Hygienists Association (ADHA) 444 N. Michigan Ave., Suite 3400 Chicago, IL 60611 312-440-8900</p>
<p><b>Dental laboratory technician</b> Prepares materials (crowns, bridges) for use by a dentist.</p>	<p>A 2-year program at a community, vocational, or technical college, either an associate's degree or certificate. The person also can work as a dental laboratory technician with on-the-job training.</p>	<p>In most states, certification to become a Certified Dental Technician (CDT) is optional.</p>	<p>National Board of Certification for Dental Laboratory Technicians (NBCDLT) 1530 Metropolitan Blvd. Tallahassee, FL 32308 850-224-0711</p>
<p><b>Diagnostic medical sonographer</b> Performs diagnostic ultrasound procedures.</p>	<p>From 1 to 4 years for certificate, associate's degree, or baccalaureate degree.</p>	<p>Optional certification exam through American Registry of Diagnostic Medical Sonographers, with the designation Registered Diagnostic Medical Sonographer (RDMS).</p>	<p>Society of Diagnostic Medical Sonographers (SDMS) 2745 Dallas Pkwy., Suite 350 Plano, TX 75093 214-473-8057</p>

Title/Description	Education Requirements	Certification or Licensure Requirements	National Association or Additional Information
<p><b>Dietitian/nutritionist</b> Plans nutrition programs and supervises the preparation and serving of meals.</p>	<p>2-year component within a baccalaureate or master's degree program, plus internship of 6 months to 2 years.</p>	<p>National certification exam to become a Certified Registered Dietitian (CRD) through the Commission on Dietetic Registration.</p>	<p>American Dietetic Association (ADA) 120 S. Riverside Plaza, Suite 2000 Chicago, IL 60606 312-899-0400, ext 5500</p>
<p><b>ECG technician (cardiovascular technician)</b> Operates an electrocardiograph to record ECGs and for Holter monitoring and stress tests.</p>	<p>Training often done on the job in 8- to 16-week programs. Longer programs are also available.</p>	<p>Optional</p>	<p>Alliance of Cardiovascular Professionals (ACP) P.O. Box 2007 Midlothian, VA 23113 804-632-0078</p>
<p><b>Emergency medical technician</b> 1. First responder 2. Basic (EMT-B) 3. Intermediate (EMT-I) 4. Paramedic (EMT-P) Gives immediate care and transports sick or injured to medical facilities.</p>	<p>Four levels: <i>First responder:</i> 40 hours <i>EMT Basic:</i> 120 hours <i>EMT Intermediate:</i> 200 to 400 hours <i>EMT Paramedic:</i> 1000+ hours</p>	<p>Administered by the National Registry of Emergency Medical Technicians (NREMT) for each level from EMT-B, EMT-I, and EMT-Paramedic.</p>	<p>National Association of Emergency Medical Technicians (NAEMT) P.O. Box 1400 Clinton, MS 39060 800-34-NAEMT</p>
<p><b>Health information management professional</b> 1. Health information technician (HIT) 2. Health information administrator (HIA) Designs, manages, and administers the use of health care data and information.</p>	<p>Two levels: <i>Health Information Technician (HIT):</i> 2-year associate's degree <i>Health Information Administrator (HIA):</i> 4-year baccalaureate degree</p>	<p>On completion of the education program, a test is required through the national association (AHIMA) to become a Registered Health Information Technician (RHIT) or Registered Health Information Administrator (RHIA).</p>	<p>American Health Information Management Association (AHIMA) 233 N. Michigan Ave., Suite 2150 Chicago, IL 60601 312-233-1100</p>

Title/Description	Education Requirements	Certification or Licensure Requirements	National Association or Additional Information
<p><b>Home health aide</b> Cares for elderly, disabled, and ill persons in their own homes, helping them live there instead of in an institution.</p>	Often on-the-job training or technical/career college.	National Association for Home Care & Hospice offers optional certification.	National Association for Home Care & Hospice (NAHCH) ( <a href="http://www.nahc.org">www.nahc.org</a> ) 202-547-7424
<p><b>Licensed practical nurse (LPN)</b> Cares for sick, injured, convalescing, and handicapped persons, under the direct supervision of physicians and registered nurses; provides basic bedside care.</p>	Approximately 1-year program, with 36 to 28 semester hours.	Must pass the National Council Licensure Examination for Practical Nurses (NCLEX-PN).	National Federation for Licensed Practical Nurses (NFLPN) 1418 Aversboro Road Garner, NC 27529 919-779-0046
<p><b>Medical assistant</b> Helps physicians examine and treat patients and performs tasks to keep offices running smoothly.</p>	Associate's degree, certificate, and diploma programs available. Medical assistants can focus on either administrative or clinical duties or both.	Optional certifications available. Exam to become a Certified Medical Assistant (CMA) through the AAMA or a Registered Medical Assistant (RMA) through American Medical Technologists Association (see next entry).	American Association of Medical Assistants (AAMA) 20 N. Wacker Dr., Suite 1575 Chicago, IL 60606 800-228-2262
<p><b>Medical laboratory technologist</b> (also see <i>Clinical laboratory technologist [CLT]</i>) Performs routine tests and laboratory procedures.</p>	A 2-year associate's degree or a 12-month certificate program.	Certification available through the following: Board of Registry of the American Society for Clinical Pathology, the American Medical Technologists Association, the National Credentialing Agency for Laboratory Personnel, and the Board of Registry of the American Association of Bioanalysts.	American Medical Technologists Association (AMTA) 710 Higgins Road Park Ridge, IL 60068 847-823-5169  American Society of Clinical Laboratory Science (ASCLS) 6701 Democracy Blvd., Suite 300 Bethesda, MD 20817 301-657-2768

Title/Description	Education Requirements	Certification or Licensure Requirements	National Association or Additional Information
<p><b>Nuclear medicine technologist</b> Performs radioactive tests and procedures under the supervision of a nuclear medicine physician, who interprets the results.</p>	<p>Professional portion of the program is 1-2 years within an associate's or baccalaureate degree program.</p>	<p>On completion of an accredited program, certification exam is available through the Nuclear Medicine Technology Certification Board.</p>	<p>Society of Nuclear Medicine— Technologist Section (SNMITS) 1850 Samuel Morse Dr. Reston, VA 22090 703-708-9000</p> <p>American Society of Radiologic Technologists (ASRT) 1500 Central Ave. SE Albuquerque, NM 87123</p>
<p><b>Nurse anesthetist</b> Aids in the delivery of anesthesia during surgery.</p>	<p>RN with baccalaureate degree plus 24-month anesthesiology training course (leading to a master's degree).</p>	<p>Required exam by the Council on Certification for Nurse Anesthetists, to become a Certified Registered Nurse Anesthetist (CRNA).</p>	<p>Association of Nurse Anesthetists (ANA) 222 S. Prospect Ave. Park Ridge, IL 60068 847-692-7050 Additional information: National League of Nursing</p>
<p><b>Nursing aide</b> (nursing assistant, orderly, hospital attendant) Helps care for physically or mentally ill, injured, or disabled patients confined to nursing, hospital, or residential care facilities; also known as nursing assistants or hospital attendants.</p>	<p>Often on-the-job training or technical/career college.</p>	<p>Optional certification is available through state nursing registries for Certified Nursing Assistant (CNA).</p>	<p>National Association of Health Care Assistants (NAHCA) 1201 L St. Washington, DC 20005 202-454-1288</p>

Title/Description	Education Requirements	Certification or Licensure Requirements	National Association or Additional Information
<p><b>Occupational therapist (OT)</b> Helps people with mentally, physically, developmentally, or emotionally disabling conditions to develop, recover, or maintain daily living and working skills.</p>	<p>Two levels: <i>Baccalaureate degree</i>: 4-5 year program <i>Masters degree</i>: additional 2.5 years</p>	<p>National certification exam through National Board for Certification of Occupational Therapy (NBCOT). All states also regulate occupational therapists. Upon passing the exam, the occupational therapist becomes an Occupational Therapist Registered (OTR).</p>	<p>American Occupational Therapy Association (AOTA) 4720 Montgomery Lane P.O. Box 31220 Bethesda, MD 20824 301-652-2682</p>
<p><b>Occupational therapy assistant (OTA)</b> Under the direction of an occupational therapist, the OTA works with patients to restore or enhance activities of daily living.</p>	<p>2-year associate's degree or 1-year certificate program.</p>	<p>National certification exam for OTA administered by: National Board for Certification of Occupational Therapy (NBCOT). Many states also regulate occupational therapy assistants.</p>	<p>American Occupational Therapy Association (AOTA) 4720 Montgomery Lane P.O. Box 31220 Bethesda, MD 20824 301-652-2682</p>
<p><b>Ophthalmic professional</b> 1. Ophthalmic assistant 2. Ophthalmic technician/technologist Helps ophthalmologists provide medical eye care.</p>	<p>Two levels: <i>Assistant</i>: less than 1 year <i>Technician/technologist</i>: 1-2 years</p>	<p>After 1 year on the job, the person may test to become a Certified Ophthalmic Medical Assistant (COMA) through the Joint Commission on Allied Health Professionals in Ophthalmology (JCAHPO).</p>	<p>Association of Technical Personnel in Ophthalmology (ATPO) 2025 Woodland Dr. St. Paul, MN 55125 651-731-7233</p>
<p><b>Pharmacy technician</b> Under the direction of licensed pharmacists, dispenses, distributes, and administers medications prescribed.</p>	<p>Usually 15 weeks (minimum 600 hours) of training required; can be on the job or through a career, technical, or community college.</p>	<p>Optional through the AAPT and Pharmacy Technician Certification Board, to become a Certified Pharmacy Technologist (CPhT).</p>	<p>American Association of Pharmacy Technologists (AAPT) P.O. Box 1447 Greensboro, NC 27402 877-368-4771</p>

Title/Description	Education Requirements	Certification or Licensure Requirements	National Association or Additional Information
<p><b>Phlebotomist</b> Draws and tests blood under the supervision of a medical technologist or laboratory manager.</p>	<p>Minimum 100 hours of clinical instruction.</p>	<p>Optional certification available through the following: American Medical Technologists Association, National Credentialing Agency for Laboratory Personnel, and Board of Registry of the American Association of Bioanalysts.</p>	<p>American Medical Technologists Association (AMTA) 710 Higgins Road Park Ridge, IL 60068 847-823-5169</p> <p>American Society of Phlebotomy Technicians (ASPT) P.O. Box 1831 Hickory, NC 28603 828-294-0078</p> <p>National Phlebotomy Association (NPA) 1901 Brightseat Road Landover, MD 20785 301-386-4200</p>
<p><b>Physical therapist (PT)</b> Improves mobility, relieves pain, and prevents or limits permanent physical disabilities of patients experiencing injuries or disease.</p>	<p>Most programs are doctoral degree programs granting a doctorate in physical therapy (DPT); a few master's degree programs are still offered.</p>	<p>On completion of accredited program, national exam is required. Other requirements vary by state.</p>	<p>American Physical Therapy Association (APTA) 111 North Fairfax St. Alexandria, VA 22314 703-684-2782</p>
<p><b>Physical therapy assistant (PTA)</b> Under the direction of a physical therapist, works with patients to improve mobility.</p>	<p>Most programs are associate's degree programs, 1 year of which is for technical courses and clinical experience.</p>	<p>Most states require physical therapy assistants to be licensed, registered, or certified.</p>	<p>American Physical Therapy Association (APTA) 111 North Fairfax St. Alexandria, VA 22314 703-684-2782</p>
<p><b>Physician assistant (PA)</b> Examines, diagnoses, and treats patients under the direct supervision of a physician.</p>	<p>Varies, but commonly a 25- to 27-month program in addition to at least 2 years of undergraduate study.</p>	<p>All states require passage of national exam through National Commission on Certification of Physician Assistants (NCCPA). To practice, PAs must also meet any additional state criteria and have a sponsoring physician.</p>	<p>American Association of Physician Assistants (AAPA) 950 N. Washington St. Alexandria, VA 22314 703-836-2272</p> <p>National Commission on Certification of Physician Assistants (NCCPA) 12000 Findley Road, Suite 200 Duluth, GA 30097 678-417-8100</p>

Title/Description	Education Requirements	Certification or Licensure Requirements	National Association or Additional Information
<p><b>Radiation therapist</b> Prepares cancer patients for treatment and examinations, and administers medications (this career is a specialty within imaging technology—see next entry).</p>	<p>After becoming a radiographer, 1 to 2 years of training.</p>	<p>Certification through American Registry of Radiologic Technologists (ARRT).</p>	<p>American Society of Radiologic Technologists (ASRT) 1500 Central Ave. SE Albuquerque, NM 87123 505-298-4500 American Registry of Radiologic Technologists (ARRT) 1255 Northland Dr. Mendota Heights, MN 55120 651-687-0048</p>
<p><b>Radiographer/radiologic technologist</b> Produces x-ray images of parts of the body for use in diagnosing medical problems.</p>	<p>2- to 4-year training program resulting in degree or certificate.</p>	<p>Certification through American Registry of Radiologic Technologists (ARRT).</p>	<p>American Society of Radiologic Technologists (ASRT) 1500 Central Ave. SE Albuquerque, NM 87123 505-298-4500  American Registry of Radiologic Technologists (ARRT) 1255 Northland Dr. Mendota Heights, MN 55120 651-687-0048</p>
<p><b>Registered nurse (RN)</b> Cares for sick and injured people by assessing and recording symptoms, assisting physicians during treatments and examinations, and administering medications.</p>	<p>ADN—community college or technical school, 2 years Diploma—hospital-based, often 3 years BSN—baccalaureate degree program, 4 years</p>	<p>All registered nurses must pass the NCLEX-RN, administered by the National Council of Licensure Examinations for RN.</p>	<p>American Nursing Association (ANA) 600 Maryland Ave. SW, Suite 100 Washington, DC 20024 800-274-4ANA  National League of Nursing (NLN) 61 Broadway, 33rd Floor New York, NY 10006 212-363-5555</p>

Title/Description	Education Requirements	Certification or Licensure Requirements	National Association or Additional Information
<p><b>Respiratory therapist</b> Evaluates, treats, and cares for patients with breathing disorders.</p>	<p><i>Entry level:</i> 2-year associate's degree program. <i>Advanced level:</i> 2- to 4-year program with baccalaureate or graduate degree.</p>	<p>Certification through National Board for Respiratory Care for Certified Respiratory Therapist (CRT).</p>	<p>American Association for Respiratory Care (AARC) 11030 Ables Lane Dallas, TX 75229 972-243-2272</p>
<p><b>Speech-language pathologist</b> Assesses and treats persons with speech, language, voice, and fluency disorders.</p>	<p>2-year master's degree plus typically 9 to 12 months of clinical experience.</p>	<p>49 states require compliance with state licensure standards and/or a teacher certification. Exam administered by ASHA for Certification of Clinical Competency in Speech-Language Pathology (CCC-SLP).</p>	<p>American Speech-Language-Hearing Association (ASHA) 1080 Rockville Pike Rockville, MD 20852 800-498-2071</p>

**GLOSSARY 1**

# **Mini-Dictionary**

Pronunciation of each term is given with its meaning. The syllable that gets the accent is in CAPITAL LETTERS. Terms in SMALL CAPITAL LETTERS are defined elsewhere in this glossary.

## A

**Abdomen** (AB-do-men): Space below the chest that contains organs such as the stomach, liver, intestines, and gallbladder. The abdomen lies between the diaphragm and the pelvis.

**Abdominal** (ab-DOM-ih-nal): Pertaining to the abdomen.

**Abdominal cavity** (ab-DOM-ih-nal KAV-ih-te): See [ABDOMEN](#).

**Ablation** (ab-LA-shun): Removal of abnormal tissue by surgical or mechanical means.

**Abnormal** (ab-NOR-mal): Pertaining to being away (AB-) from the norm; irregular.

**Acquired immunodeficiency syndrome** (ah-KWYRD im-u-no-deh-FISH-en-se SIN-droh-m) or **AIDS**: Suppression or deficiency of the immune response caused by exposure to the HUMAN IMMUNODEFICIENCY VIRUS (HIV).

**Acromegaly** (ak-ro-MEG-ah-le): Enlargement of extremities as a result of thickening of the bones and soft tissues; it is caused by excessive secretion of growth hormone from the pituitary gland (after completion of puberty).

**Acute** (uh-KYOOT): Sharp, sudden, and intense for a short period of time.

**Acute myocardial ischemia** (ah-KUT mi-o-KAR-de-al is-KE-me-ah): Sudden decrease in blood flow to the heart muscle.

**Adenectomy** (ad-eh-NEK-to-me): Removal of a gland.

**Adenitis** (ad-eh-NI-tis): Inflammation of a gland.

**Adenocarcinoma** (ah-deh-no-kar-sih-NO-mah): Cancerous tumor derived from glandular cells.

**Adenoidectomy** (ah-deh-noyd-EK-to-me): Removal of the adenoids.

**Adenoids** (AD-eh-noydz): Lymphatic tissue in the upper part of the throat near the nasal passageways.

**Adenoma** (ah-deh-NO-mah): Tumor (benign) of a gland. Benign means not cancerous.

**Adenopathy** (ah-deh-NOP-ah-the): Disease of glands. Often this term refers to enlargement of lymph nodes (which are not true glands, but collections of lymphatic tissue).

**Adnexa uteri** (ad-NEKS-ah U-ter-i): Accessory structures of the uterus (ovaries and fallopian tubes).

**Adrenal cortex** (ah-DRE-nal KOR-teks): Outermost part of the adrenal gland. The adrenal cortex secretes steroid hormones such as GLUCOCORTICOIDS (cortisone).

**Adrenal glands** (ah-DRE-nal glanz): Two endocrine glands, each above a kidney. The adrenal glands produce hormones such as adrenaline (epinephrine) and hydrocortisone (cortisol).

**Adrenalectomy** (ah-dre-nal-EK-to-me): Removal (excision) of adrenal glands.

**Adrenaline** (ah-DREN-ah-lin): Hormone secreted by the adrenal glands. It is released into the bloodstream in response to stress, such as from fear or physical injury. Also called EPINEPHRINE.

**Adrenocorticotrophic hormone** (ah-dre-no-kor-tih-ko-TROP-ic HOR-mone): Hormone secreted by the pituitary gland. It stimulates the adrenal gland (cortex or outer region) to secrete the hormone cortisone. Also called ACTH.

**Adrenopathy** (ah-dreh-NOP-a-the): Disease of ADRENAL GLANDS.

**AIDS**: See [ACQUIRED IMMUNODEFICIENCY SYNDROME](#).

**Air sacs** (ayr saks): Thin-walled sacs within the lung. Inhaled oxygen passes into the blood from the sacs, and carbon dioxide passes out from the blood into the sacs to be exhaled; ALVEOLI.

- Albumin** (al-BU-min): A large-molecule protein found in blood and tissues.
- Albuminuria** (al-bu-min-U-re-ah): Albumin (protein) in the urine; it indicates a malfunction of the kidney.
- Alkaline phosphatase** (AL-kah-line PHOS-fah-tays): An enzyme present in blood and body tissues, such as bone and liver. Elevated in diseases such as those of bone and liver. Also called alk phos.
- Allergist** (AL-er-jist): Medical doctor specializing in identifying and treating abnormal sensitivity to substances such as pollen, dust, foods, and drugs.
- Alopecia** (ah-lo-PE-shah): Loss of hair; baldness.
- ALT**: Alanine transferase, an enzyme normally found in blood and tissues, especially the liver. ALT is elevated in liver disease. (Formerly called SGPT.)
- Alveolar** (al-VE-o-lar): Pertaining to air sacs (alveoli) within the lungs.
- Alveoli** (al-VE-o-li): Thin-walled sacs within the lung. Inhaled oxygen passes into the blood from the sacs, and carbon dioxide passes out from the blood into the sacs to be exhaled (*singular*: ALVEOLUS).
- Alveolus** (al-ve-O-lus): An air sac within the lung (*plural*: ALVEOLI).
- Alzheimer disease** (ALTZ-hi-mer di-ZEEZ): Deterioration of mental capacity (irreversible dementia) marked by intellectual deterioration, disorganization of personality, and difficulties in carrying out tasks of daily living.
- Amenorrhea** (a-men-o-RE-ah): Absence of menstrual flow.
- Amniocentesis** (am-ne-o-sen-TE-sis): Surgical puncture to remove fluid from the amnion (sac surrounding the developing fetus).
- Anal** (A-nal): Pertaining to the anus (opening of the rectum to the outside of the body).
- Analgesic** (an-al-JE-zik): Medication that reduces or eliminates pain.
- Analysis** (ah-NAL-ih-sis): Separating a substance into its component parts.
- Anastomosis** (ah-nah-sto-MO-sis): New surgical connection between two previously unconnected bowel parts, vessels, or ducts.
- Androgen** (AN-dro-jen): Hormone that controls the development of masculine characteristics. An example is TESTOSTERONE.
- Anemia** (ah-NE-me-ah): Deficiency of hemoglobin and/or in number of red blood cells. This results in reduced delivery of oxygen to body cells. Literally, *anemia* means lacking (AN-) in blood (-EMIA).
- Anemic** (ah-NE-mik): Pertaining to ANEMIA.
- Anesthesiologist** (an-es-the-ze-OL-o-jist): Medical doctor specializing in administering agents capable of bringing about loss of sensation and consciousness.
- Anesthesiology** (an-es-the-ze-OL-o-je): Study of how to administer agents capable of bringing about loss of sensation and consciousness.
- Aneurysm** (AN-u-rizm): Localized widening of the wall of an artery, of a vein, or of the heart. From the Greek *aneurysma*, meaning “widening.”
- Angina** (an-JI-nah): Sharp pain in the chest resulting from a decrease in blood supply to heart muscle. Also called angina pectoris (PECT/O means chest).
- Angiography** (an-je-OG-rah-fe): X-ray recording of blood vessels after contrast is injected.
- Angioplasty** (AN-je-o-plas-te): Surgical repair of a blood vessel. A tube (catheter) is placed in a clogged artery and a balloon at the end of the tube is inflated to flatten the clogged material against the wall of the artery. This enlarges the opening of the artery so that more blood can pass through. Also called balloon angioplasty.
- Angiotensin** (an-je-o-TEN-sin): Hormone that is a powerful vasoconstrictor and raises blood pressure.
- Ankylosing spondylitis** (ang-kih-LO-sing spon-dih-LI-tis): Chronic inflammation of the vertebrae (backbones) with stiffening of spinal and hip joint so that movement becomes increasingly painful.

- Ankylosis** (ang-kih-LO-sis): Stiffening and immobility of a joint caused by injury, disease, or a surgical procedure.
- Anomaly** (ah-NOM-ah-le): Irregularity; a deviation from the normal. A congenital anomaly (irregularity) is present at birth.
- Antenatal** (an-teh-NA-tal): Before birth.
- Antepartum** (an-teh-PAR-tum): Before birth.
- Anterior** (an-TE-re-or): Located in the front (of the body or of a structure).
- Antiandrogen** (an-tih-AN-dro-jen): Substance that inhibits the effects of androgens (male hormones).
- Antiarrhythmic** (an-te-ah-RITH-mik): Pertaining to a drug that works against or prevents abnormal heartbeats (arrhythmias).
- Antibiotic** (an-tih-bi-OT-ik): A chemical substance produced by various microorganisms or fungi (immature plants) that inhibits or destroys bacteria or other small organisms. Examples of antibiotics are penicillin and streptomycin. They are used in the treatment of infectious diseases.
- Antibody** (AN-tih-bod-e): A substance that works against (ANTI-) germs ("bodies" of infection). Antibodies are produced by white blood cells when germs (antigens) enter the bloodstream.
- Anticoagulant** (an-tih-ko-AG-u-lant): Drug that prevents clotting (coagulation). Anticoagulants are given when there is danger of clot formation in blood vessels, as may happen after a heart attack.
- Anticonvulsant** (an-tih-kon-VUL-sant and an-tih-de-PRE-sant): Drug that prevents or relieves convulsions (involuntary muscular contractions).
- Antidepressant** (an-tih-de-PRES-ant): Drug used to prevent or treat depression.
- Antidiabetic** (an-tih-di-ah-BET-ik): Drug that prevents or relieves symptoms of diabetes.
- Antiestrogen** (an-tih-ES-tro-jen): Substance that inhibits the effects of estrogens (female hormones).
- Antifungal** (an-tih-FUNG-al): Drug that destroys or inhibits the growth of fungi (organisms such as yeasts, molds, and mushrooms).
- Antigen** (AN-tih-jen): Foreign protein (such as on a bacterium or virus) that stimulates white blood cells to make antibodies. Antigens are then destroyed by the antibodies.
- Antihistamine** (an-tih-HIS-tah-meen): Drug used to counteract the effects of histamine production in allergic reactions and colds.
- Antihypertensive** (an-te-hi-per-TEN-siv): Drug that reduces high blood pressure.
- Antitubercular** (an-tih-too-BER-ku-lar): Agent or drug used to treat tuberculosis.
- Antiviral** (an-tih-VI-ral): Agent that inhibits and prevents the growth and reproduction of viruses.
- Anuria** (an-U-re-ah): Abnormal condition of no urine production.
- Anus** (A-nus): Opening of the rectum to the surface of the body; solid wastes (feces) leave the body through the anus.
- Aorta** (a-OR-tah): Largest artery that leads from the lower left chamber of the heart to arteries all over the body.
- Aortic stenosis** (a-OR-tik steh-NO-sis): Narrowing of the aorta.
- Apex** (A-peks): Pointed end of an organ (*plural*: apices [A-pih-seez]).
- Aphakia** (ah-FA-ke-ah): Absence of the lens of the eye.
- Aphasia** (ah-FA-ze-ah): Absence or impairment of communication through speech.
- Apnea** (AP-ne-ah): Not (A-) able to breathe (-PNEA); temporary stoppage of breathing. In sleep apnea, during sleep, a person is momentarily unable to contract respiratory muscles and maintain air flow through the nose and mouth.
- Appendectomy** (ap-en-DEK-to-me): Removal of the appendix.
- Appendicitis** (ap-en-dih-SI-tis): Inflammation of the appendix.

- Appendix** (ah-PEN-dikz): Small sac that hangs from the juncture of the small and large intestines in the right lower quadrant of the abdomen. Its function is unknown.
- Arachnoid membrane** (ah-RAK-noyd MEM-brayn): The middle membrane of the MENINGES (coverings around the brain and spinal cord).
- Areola** (ah-RE-o-lah): Dark, pigmented area around the nipple of the breast.
- Arrhythmia** (a-RITH-me-ah): Abnormal heart rhythm.
- Arteriography** (ar-teer-e-OG-rah-fe): Process of recording (x-ray) of arteries after injecting contrast material.
- Arteriole** (ar-TEER-e-ole): Small artery.
- Arteriolitis** (ar-teer-e-o-LI-tis): Inflammation of small arteries (arterioles).
- Arteriosclerosis** (ar-teer-e-o-skleh-RO-sis): Hardening of arteries. The most common form is *atherosclerosis*, which is hardening of arteries caused by collection of fatty, cholesterol-like deposits (plaque) in arteries.
- Arteriovenous fistula** (ar-teer-e-o-VE-nus FIST-u-lah): An abnormal communication between an artery and a vein. It can also be created surgically to provide access for hemodialysis.
- Artery** (AR-ter-e): Largest (in diameter) blood vessel. Arteries carry blood away from the heart.
- Arthralgia** (ar-THRAL-jah): Pain in a joint.
- Arthritis** (ar-THRI-tis): Inflammation of a joint.
- Arthrocentesis** (ar-thro-sen-TE-sis): Surgical puncture to remove fluid from a joint for diagnosis or treatment.
- Arthrogram** (AR-thro-gram): X-ray record of a joint.
- Arthropathy** (ar-THROP-ah-the): Disease of joints.
- Arthroplasty** (AR-thro-plas-te): Surgical repair of a joint, especially to restore mobility in osteoarthritis or rheumatoid arthritis.
- Arthroscope** (AR-thro-skope): Instrument used to examine (inside of) a joint.
- Arthroscopy** (ar-THROS-ko-pe): Process of visual examination of a joint.
- Arthrosis** (ar-THRO-sis): Abnormal condition of a joint.
- Ascites** (ah-SI-teez): Abnormal collection of fluid in the abdomen.
- Asphyxia** (as-FIK-se-ah): Deficiency of oxygen in the blood and increase in carbon dioxide in blood and tissues. Major sign is a complete absence of breathing, leading to loss of consciousness or death.
- Aspiration** (as-per-A-shun): Withdrawal of fluid from a cavity or sac.
- AST**: Aspartate transferase, an enzyme normally present in blood and tissues such as heart and liver. (Formerly called SGOT.)
- Asthma** (AZ-mah): Difficult breathing caused by a spasm of the bronchial tubes or a swelling of their mucous membrane lining.
- Atelectasis** (ah-teh-LEK-tah-sis): Collapsed lung or part of a lung (ATEL-, meaning incomplete; -ECTASIS, meaning widening or dilation).
- Atherosclerosis** (ah-theh-ro-skle-RO-sis): See [ARTERIOSCLEROSIS](#).
- Atrium** (A-tre-um): Upper chamber of the heart (*plural*: atria).
- Atrophy** (AT-ro-fe): Decrease in size of cells within an organ.
- Auditory canal** (AW-dih-tor-e kah-NAL): Passageway leading into the ear from the outside of the body.
- Auditory nerve** (AW-dih-tor-e nurv): Nerve that transmits sound waves from the inner ear to the brain, making hearing possible.
- Aura** (AW-rah): A strange sensation coming before more definite symptoms of illness. An aura often precedes a migraine headache or an epileptic seizure, warning the patient that an attack is beginning.
- Aural discharge** (AW-rahL DIS-charj): Fluid or material that is expelled from the ear.

**Autopsy** (AW-top-se): Examination of a dead body to determine the cause of death. Also called a POSTMORTEM exam or NECROPSY. Literally, it means “to see” (-OPSY) with “one’s own” (AUT-) eyes.

**Axial** (AKS-e-al): Pertaining to an axis (an imaginary line through the center of a body or about which a structure revolves). Axial (transverse plane) views are seen in CT and MRI scans.

**Axillary** (AKS-ih-lar-e): Pertaining to the armpit or underarm.

## B

**Bactericidal** (bak-tih-re-SI-dal): Pertaining to an agent that destroys bacteria.

**Bacteriostatic** (bak-tih-re-o-STAT-ik): Pertaining to an agent that inhibits bacterial growth.

**Bacterium** (bak-TIH-re-um): Type of one-celled organism whose genetic material (DNA) is not organized within a nucleus (*plural*: bacteria).

**Balanitis** (bah-lah-NI-tis): Inflammation of the penis.

**Bariatric surgery** (bah-re-AH-trik SUR-jer-e): Surgery on part of the gastrointestinal tract for obesity. BARI/O means weight, and IATR/O means treatment.

**Barium** (BAH-re-um): Substance used as a radiopaque (x-rays cannot pass through it) contrast medium for x-ray examination of the digestive tract.

**Barium enema** (BAH-re-um EN-eh-mah): X-ray study of the lower digestive tract performed by instilling a solution of barium into the rectum, which highlights structures seen on the x-ray images.

**Barium swallow** (BAH-re-um SWAH-lo): X-ray study of the upper digestive tract performed by having the patient swallow a solution of barium, which highlights structures seen on the x-ray images.

**Benign** (be-NIN): Not cancerous; a tumor that does not spread and is limited in growth. Benign is the opposite of malignant.

**Benign prostatic hyperplasia** (be-NIN pro-STAH-tik hi-per-PLA-ze-ah): Nonmalignant enlargement of the prostate gland. Also called benign prostatic hypertrophy (hi-PER-tro-fe).

**Benzodiazepine** (ben-zo-di-AZ-eh-pin): Drug used to relieve anxiety, relax muscles, and produce sedation.

**Beta blocker** (BA-tah BLOK-er): Drug that is used for the treatment of high blood pressure (hypertension), chest pain (angina), and abnormal rhythms of the heart (arrhythmias).

**Bilateral** (bi-LAT-er-al): Pertaining to two (both) sides.

**Bile** (bil): A yellow or orange fluid produced by the liver. It breaks up large fat globules and helps in the digestion of fats.

**Bile duct** (bil dukt): Tube that carries bile from the liver and gallbladder to the intestine.

**Bilirubin** (bil-ih-RU-bin): A red blood cell pigment excreted with bile from the liver into the intestine.

**Biology** (bi-OL-o-je): Study of life.

**Biopsy** (BI-op-se): Living tissue is removed and viewed under a microscope. In a *core (needle) biopsy*, a small sample of tissue is removed using a hollow needle. It is typically performed under imaging guidance such as ULTRASOUND or CT SCAN.

**Bladder** (BLAH-der): See [URINARY BLADDER](#).

**Bone** (bone): Hard, rigid type of connective tissue that makes up most of the skeleton. It is composed of calcium salts.

**Bone marrow** (bone MAH-ro): Soft, sponge-like material in the inner part of bones. Blood cells are made in the bone marrow.

**Bones of the middle ear:** Three small bones (ossicles) that transmit sound vibrations to the inner ear; malleus, incus, and stapes.

**Bradycardia** (bra-de-KAR-de-ah): Slow heartbeat.

**Brain** (brayn): Organ in the head that controls the activities of the body.

**Breast** (brest): One of two glandular organs on the front of the chest. The breasts produce milk after childbirth.

**Bronchial tube** (BRONG-ke-al toob): One of two tubes that carry air from the windpipe to the lungs. Also called a bronchus (*plural*: bronchi).

**Bronchiole** (BRONG-ke-ol): Small bronchial tube.

**Bronchiolitis** (brong-ke-o-LI-tis): Inflammation of bronchioles.

**Bronchitis** (brong-KI-tis): Inflammation of bronchial tubes.

**Bronchoscope** (BRONG-ko-skope): Instrument used to visually examine bronchial tubes.

**Bronchoscopy** (brong-KOS-ko-pe): Visual examination of bronchial tubes by passing an endoscope through the trachea (windpipe) into the bronchi.

**Bronchus** (BRONG-kus): See [BRONCHIAL TUBE](#).

**Bursa** (BUR-sah): Sac of fluid near a joint (*plural*: bursae [BUR-se]).

**Bursitis** (bur-SI-tis): Inflammation of a bursa.

## C

**Calcaneus** (kal-KA-ne-us): Heel bone.

**Calcification** (cal-sih-fih-KA-shun): Accumulation of calcium salts in tissues.

**Calcium channel blocker** (KAL-se-um CHAH-nel BLOK-er): Drug that dilates arteries by inhibiting the flow of calcium into muscle cells that line arteries. It is used to treat hypertension (high blood pressure) and angina (chest pain caused by insufficient oxygen to heart muscle).

**Calculus** (KAL-ku-lus): Stone (*plural*: calculi [KAL-ku-li]).

**Callus** (KAL-us): Bony deposit formed between and around the broken ends of a fractured bone. Also, a painless thickening of skin cells in areas of external pressure or friction.

**Capillary** (KAP-ih-lar-e): Smallest blood vessel (*plural*: capillaries).

**Carbon dioxide** (KAR-bon di-OK-side): Odorless, colorless gas formed in tissues and eliminated by the lungs.

**Carcinoma** (kar-sih-NO-mah): Cancerous tumor. Carcinomas form from epithelial cells that line the internal organs and cover the outside of the body.

**Cardiac** (KAR-de-ak): Pertaining to the heart.

**Cardiac catheter ablation** (KAR-de-ak KAH-theh-ter ab-LA-shun): Procedure to correct an ARRHYTHMIA by advancing a flexible tube (catheter) through blood vessels into the heart. High-frequency electrical impulses then destroy the abnormal tissue that is causing the arrhythmia.

**Cardiologist** (kar-de-OL-o-jist): Physician specializing in the study of the heart and heart disease.

**Cardiology** (kar-de-OL-o-je): Study of the heart.

**Cardiomegaly** (kar-de-o-MEG-ah-le): Enlargement of the heart.

**Cardiomyopathy** (kar-de-o-mi-OP-ah-the): Disease of heart muscle.

**Cardiovascular surgeon** (kar-de-o-VAS-ku-lar SUR-jun): Specialist in operating on the heart and blood vessels.

**Cardioversion** (KAR-de-o-ver-zhun): Brief discharges of electricity passing across the chest to stop a cardiac ARRHYTHMIA. Also called DEFIBRILLATION.

**Carpals** (KAR-palz): Wrist bones.

**Carpal tunnel syndrome** (KAR-pal TUN-el SYN-droh-m): Group of symptoms resulting from compression of the median nerve in the wrist. Symptoms include tingling, pain, and burning sensations in the hand and wrist.

- Cartilage** (KAR-tih-laj): Flexible, fibrous connective tissue, found as part of the nose, ears, voice box, and windpipe and chiefly attached to bones at joints.
- Cataract** (KAT-ah-rakt): Clouding of the lens of the eye.
- Cathartic** (ka-THAR-tik): Pertaining to a substance that causes the release of feces from the large intestine.
- Catheter** (KATH-eh-ter): Flexible or rigid hollow tube used to drain fluids from the body or inject fluids into the body. Catheters are also used to help keep passageways open.
- CAT scan** (kat skan): Computerized axial tomography. See **CT SCAN**.
- Cauda equina** (KAW-dah eh-KWI-nah): Bundle of nerve fibers and nerve roots extending from the end of the spinal cord (L3) to the sacral and coccygeal nerves. *Cauda equina* is Latin for “horse’s tail,” which describes its appearance.
- Caudal** (KAW-dal): Pertaining to the tail or the lower portion of the body.
- Cauterization** (kaw-tur-e-ZA-shun): Heat is used to destroy abnormal tissue, for example, in the lining of the cervix (lower neck-like region of the uterus).
- Cautery** (KAW-tur-e): Instrument or agent used to destroy tissue by burning.
- Cell** (sel): Smallest unit or part of an organ.
- Cellulitis** (sel-u-LI-tis): Inflammation of soft tissue under the skin; it is marked by swelling, redness, and pain, and is caused by bacterial infection.
- Cephalgia** (seh-FAL-jah): Headache. Shortened form of *cephalalgia*.
- Cephalic** (seh-FAL-ik): Pertaining to the head. *Cephalic presentation* refers to a fetal position in which the head of the fetus appears at the uterine cervix as the infant is born.
- Cephalosporin** (sef-ah-lo-SPOR-in): Antibiotic similar to penicillin and used to treat infections of the respiratory tract, ear, urinary tract, bones, and blood.
- Cerebellar** (ser-eh-BEL-ar): Pertaining to the CEREBELLUM.
- Cerebellum** (ser-eh-BEL-um): Lower, back part of the brain that coordinates muscle movement and balance.
- Cerebral** (seh-RE-bral or SER-eh-bral): Pertaining to the CEREBRUM.
- Cerebrospinal fluid** (seh-RE-bro SPI-nal FLOO-id): Fluid surrounding the brain and spinal cord.
- Cerebrovascular accident** (seh-re-bro-VAS-ku-lar AK-sih-dent): Blood is prevented from reaching areas of the cerebrum, and brain cells die; also called a **STROKE**.
- Cerebrum** (seh-RE-brum): Largest part of the brain. It controls thought processes, hearing, speech, vision, and body movements.
- Cervical** (SER-vih-kal): Pertaining to the neck of the body or the neck (cervix) of the uterus.
- Cervical region** (SER-vih-kal RE-jun): Seven backbones in the area of the neck.
- Cervical vertebra** (SER-vih-kal VER-teh-brah): Backbone in the neck.
- Cervix** (SER-viks): Lower, neck-like portion of the uterus opening into the vagina.
- Cesarean section** (seh-ZAR-re-an SEK-shun): Incision of the uterus to remove the fetus at birth.
- Chlamydial infection** (klah-MID-e-al in-FEK-shun): A bacterial infection commonly transmitted by sexual contact.
- Chemotherapy** (ke-mo-THER-ah-pe): Treatment with drugs. Chemotherapy is most often used in the treatment of cancer.
- Cholecystectomy** (ko-leh-sis-TEK-to-me): Removal of the gallbladder.
- Choledochoduodenostomy** (ko-led-oh-ko-doo-o-deh-NOS-to-me): New surgical attachment of the common bile duct to the duodenum; an anastomosis.
- Choledochotomy** (ko-led-o-KOT-o-me): Incision of the common bile duct.
- Cholelithiasis** (ko-leh-lih-THI-ah-sis): Abnormal condition of gallstones.
- Cholesterol** (ko-LES-ter-ol): Fatty substance made in the liver and found in the bloodstream. It is an important part of all cells and is necessary for creating hormones. It may accumulate in the lining of arteries, such as in the heart, causing heart disease, or in the gallbladder to form gallstones. Normal adult levels are 120 to 200 mg/dL.

- Chondroma** (kon-DRO-mah): Benign tumor of CARTILAGE.
- Chondrosarcoma** (kon-dro-sar-KO-mah): Malignant tumor of CARTILAGE.
- Chronic** (KRON-ik): Lasting a long time.
- Chronic obstructive pulmonary disease** (KRON-ik ob-STRUK-tiv PUL-mo-na-re dih-ZEEZ): Chronic limitation in airflow into and out of the body; includes chronic bronchitis, ASTHMA, and EMPHYSEMA. Also called COPD.
- Circulatory system** (SER-ku-lah-tor-e SIS-tem): Organs (heart and blood vessels) that carry blood throughout the body.
- Cirrhosis** (seh-RO-sis): Liver disease with deterioration of the liver cells. Cirrhosis is often caused by alcoholism and poor nutrition.
- Clavicle** (KLAV-ih-kul): Collarbone.
- Clinical** (KLIN-ih-kal): Pertaining to the bedside or clinic; involving patient care.
- Coccygeal** (kok-sih-JE-al): Pertaining to the tailbone (coccyx).
- Coccygeal region** (kok-sih-JE-al RE-jun): Four fused (joined-together) bones at the base of the spinal column (backbone).
- Coccyx** (KOK-siks): Tailbone.
- Cochlear** (KO-kle-er): Pertaining to the spiral-shaped cavity (cochlea) of the inner ear that transmits sound vibrations to the auditory nerve.
- Colectomy** (ko-LEK-to-me): Removal of the colon (large intestine).
- Colitis** (ko-LI-tis): Inflammation of the colon (large intestine).
- Colocolostomy** (ko-lo-ko-LOS-to-me): New surgical connection between two previously unconnected portions of the colon. This is an anastomosis.
- Colon** (KO-lon): Large intestine (bowel).
- Colonic polyposis** (ko-LON-ik pol-ih-PO-sis): Condition of growths or masses protruding from the mucous membrane lining the colon.
- Colonoscopy** (ko-lon-OS-ko-pe): Visual examination of the colon.
- Colorectal surgeon** (ko-lo-REK-tal SUR-jun): Physician specializing in operating on the colon and rectum.
- Colostomy** (ko-LOS-to-me): Opening of the colon to the outside of the body.
- Colposcopy** (kol-POS-ko-pe): Visual examination of the vagina and cervix.
- Computed tomography scan** (kom-PU-ted to-MOG-rah-fe skan): X-ray images taken to show the body in cross-sectional views. Also called CT SCAN.
- Concussion** (kon-KUSH-un): Traumatic brain injury that can cause bruising, damage to blood vessels, and injury to nerves. Loss of consciousness may result.
- Congenital anomaly** (con-JEN-ih-tal ah-NOM-ah-le): See [ANOMALY](#).
- Congestive heart failure** (kon-JES-tiv hart FAIL-ur): Condition in which the heart is unable to pump its required amount of blood, resulting in inadequate oxygen to body cells.
- Conization** (ko-nih-ZA-shun): Removal of a wedge-shaped piece (cone) of tissue from the cervix for biopsy in the diagnosis and treatment of early cervical cancer.
- Conjunctiva** (kon-junk-TI-vah): Thin protective membrane over the front of the eye and attached to the eyelids.
- Conjunctivitis** (kon-junk-ti-VI-tis): Inflammation of the CONJUNCTIVA.
- Connective tissue** (kon-NEK-tiv TIS-u): Fibrous tissue that supports and connects internal organs, bones, and walls of blood vessels.
- Contraindication** (kon-tra-in-dih-KA-shun): Specific situation in which a drug, procedure, or surgery should not be used because it may be harmful to the patient.
- Contralateral** (kon-tra-LAT-er-al): Pertaining to the opposite side.
- Core biopsy** (kor BI-op-se): See [BIOPSY](#).
- Corium** (KOR-e-um): Middle layer of the skin below the epidermis; DERMIS.
- Cornea** (KOR-ne-ah): Transparent layer over the front of the eye. It bends light to focus it on sensitive cells (retina) at the back of the eye.
- Coronal plane** (kor-O-nal playn): See [FRONTAL PLANE](#).

- Coronary** (KOR-on-ayr-e): Pertaining to the heart.
- Coronary angiogram** (KOR-on-ayr-e AN-je-o-gram): X-ray record of blood vessels surrounding the heart.
- Coronary arteries** (KOR-on-ayr-e AR-ter-eez): Blood vessels that carry oxygen-rich blood from the aorta to the heart muscle.
- Coroner** (KOR-oh-ner): A person who determines the cause of death in cases where the death was sudden, unexpected, of suspicious origin, or while under police custody. Generally, coroners have legal and/or medical backgrounds.
- Cortex** (KOR-teks): Outer part of an organ (*plural*: cortices [KOR-tih-seez]).
- Cortisol** (KOR-tih-sol): Anti-inflammatory hormone secreted by the adrenal cortex.
- Costochondritis** (kos-to-kon-DRI-tis): Inflammation of the cartilage attached to a rib.
- Costochondral** (kos-to-KON-dral): Pertaining to a rib and its cartilage.
- Cranial cavity** (KRA-ne-al KAV-ih-te): Space surrounded by the skull and containing the brain and other organs.
- Craniotomy** (kra-ne-OT-o-me): Incision of the skull.
- Cranium** (KRA-ne-um): Skull.
- Creatinine** (kre-AT-tih-noon): Nitrogen-containing waste that is removed from the blood by the kidney and excreted in urine.
- Crohn disease** (kron dih-ZEEZ): Inflammation of the gastrointestinal tract (often the ileum) marked by bouts of diarrhea, abdominal cramping, and fever. Along with ulcerative colitis, Crohn's is a type of INFLAMMATORY BOWEL DISEASE.
- Cross section** (kros SEK-shun): Division of an organ or the body into upper and lower portions; TRANSVERSE PLANE.
- Cryosurgery** (kri-o-SUR-jeh-re): Use of cold temperatures (such as liquid nitrogen) to freeze and destroy tissue.
- Cryotherapy** (kri-o-THER-ah-pe): Treatment using cold (CRY/O) temperatures.
- Cryptorchism** (kript-OR-kizm): Undescended (CRYPT- means hidden) testicle. The testicle is not in the scrotal sac at birth. Also called *cryptorchidism*.
- CT colonography** (CT ko-lon-OG-ra-fe): CT imaging procedure using x-rays and computer equipment to produce images of the colon and display them on a screen. Also called *virtual colonoscopy*.
- CT scan**: Computed tomography study; series of x-ray images showing organs in cross section (transverse view). Also called a CAT SCAN.
- Cusp** (KUSP): Any one of the small flaps on the valves of the heart. Also, a sharp projection extending from the surface of a tooth.
- Cushing syndrome** (KOOSH-ing SYN-droh-m): Clinical signs and symptoms produced by an excess of cortisol from the adrenal cortex. Cushing syndrome is marked by "moon face," fatty swellings, and weakness.
- Cuticle** (KU-ti-cul): Thin layer of dead skin at the base of the nail plate.
- Cyanosis** (si-ah-NO-sis): Bluish discoloration of the skin due to deficient OXYGEN in the bloodstream.
- Cystitis** (sis-TI-tis): Inflammation of the urinary bladder.
- Cystoscope** (SIS-to-skope): Instrument (endoscope) used to view the urinary bladder.
- Cystoscopy** (sis-TOS-ko-pe): Visual examination of the urinary bladder.
- Cytology** (si-TOL-o-je): Study of cells.

## D

- Debridement** (de-BREED-ment): Removal of diseased tissue from the skin.
- Deep vein thrombosis** (deep vayn throm-BO-sis): Abnormal condition of clot formation in a deep vein, usually in the leg or pelvic (hip) region.

- Defibrillation** (de-fib-rih-LA-shun): Brief discharges of electricity applied to the chest to stop an abnormal heart rhythm.
- Delusion** (deh-LOO-zhun): A persistent belief held by a person despite evidence to the contrary.
- Dementia** (deh-MEN-shah): Loss of memory and mental abilities.
- Dermal** (DER-mal): Pertaining to the skin.
- Dermatitis** (der-mah-TI-tis): Inflammation of the skin.
- Dermatologist** (der-mah-TOL-o-jist): Physician specializing in the skin and its diseases.
- Dermatology** (der-mah-TOL-o-je): Study of the skin and its diseases.
- Dermatosis** (der-mah-TO-sis): Abnormal condition of the skin.
- Dermis** (DER-mis): Fibrous middle layer of the skin below the epidermis. The dermis contains nerves and blood vessels, hair roots, and oil and sweat glands.
- Diabetes mellitus** (di-ah-BE-teez MEL-lih-tus): Disorder marked by deficient insulin in the blood, which causes sugar to remain in the blood rather than entering cells. Diabetes is named from a Greek word meaning “siphon” (through which water passes easily). One symptom is frequent urination (polyuria). Type 1 diabetes is marked by lack of insulin, and patients need injections of insulin. In type 2 diabetes, insulin is not adequately or appropriately secreted. Type 2 diabetes has a tendency to develop later in life, and patients can be managed with diet, exercise, and oral antidiabetic drugs.
- Diagnosis** (di-ag-NO-sis): Complete knowledge of patient’s condition (*plural*: diagnoses).
- Dialysis** (di-AL-ih-sis): Complete separation (-LYSIS) of wastes (urea) from the blood when the kidneys fail. See also [HEMODIALYSIS](#) and [PERITONEAL DIALYSIS](#).
- Diameter** (di-AM-eh-ter): Measurement (-meter) through (dia-) center of a circle or tube. The diameter of an artery is larger than the diameter of a vein or capillary.
- Diaphragm** (DI-ah-fram): Muscle that separates the chest from the abdomen.
- Diarrhea** (di-ah-RE-ah): Discharge of watery wastes from the COLON.
- Digestive system** (di-JES-tiv SIS-tem): Organs that bring food into the body and break it down to enter the bloodstream or eliminate it through the rectum and anus.
- Dilation** (di-LA-shun): Widening; dilatation.
- Dilation and curettage** (di-LA-shun and kur-eh-TAZH): Widening of the opening to the cervix and scraping (curettage) of the inner lining of the uterus; also called D&C.
- Disc** (disk): Pad of cartilage that is between each backbone. Also spelled disk.
- Diuretic** (di-u-RET-ik): Drug that causes kidneys to allow more fluid (as urine) to leave the body. Diuretics remove fluid from the blood and are used to treat HYPERTENSION. DI- (from DIA-) means complete, and UR- means urine.
- Diverticula** (di-ver-TIK-u-lah): Small pouches or sacs created by herniation of mucous membrane linings, most commonly in the colon (*singular*: diverticulum).
- Diverticulitis** (di-ver-tik-u-LI-tis): Inflammation of diverticula. Penetration of fecal material through thin-walled diverticula causes inflammation and infection in the colon.
- Diverticulosis** (di-ver-tik-u-LO-sis): Abnormal condition of small pouches in the lining of the intestines.
- Duodenal** (do-o-DE-nal): Pertaining to the duodenum.
- Duodenum** (do-o-DE-num): First part of the small intestine.
- Dura mater** (DU-rah MAH-ter): Outermost of the three layers of the MENINGES surrounding the brain and spinal cord. The name comes from Latin, meaning “hard mother.” It is the toughest of the three layers.
- Dysentery** (DIS-en-teh-re): Condition of painful intestines (often caused by bacterial infection).
- Dysmenorrhea** (dis-men-o-RE-ah): Painful menstrual flow.
- Dyspepsia** (dis-PEP-se-ah): Painful (DYS-) digestion (-PEPSIA).
- Dysphagia** (dis-FA-jah): Difficult swallowing.
- Dysphasia** (dis-FA-zhah): Difficult (impairment of) speech.

**Dysplasia** (dis-PLA-zhah): Abnormality of the development or the formation of cells.

Normal cells change in size, shape, and organization.

**Dyspnea** (disp-NE-ah): Painful (DYS-) (labored, difficult) breathing (-PNEA).

**Dysuria** (dis-U-re-ah): Painful or difficult urination.

## E

**Ear:** Organ that receives sound waves and transmits them to nerves leading to the brain.

**Eardrum** (EAR-drum): Membrane separating the outer and middle parts of the ear; the tympanic membrane.

**Ectopic pregnancy** (ek-TOP-ik PREG-nan-se): Pregnancy that is not in the uterus, usually occurring in the FALLOPIAN TUBES.

**Edema** (eh-DE-mah): Swelling in tissues. Edema is often caused by retention (holding back) of fluid and salt by the kidneys.

**Ejaculation** (e-jak-ku-LA-shun): Release of semen from the male urethra.

**Electrocardiogram** (e-lek-tro-KAR-de-o-gram): Record of the electricity in the heart.

**Electroencephalogram** (e-lek-tro-en-SEF-ah-lo-gram): Record of the electricity in the brain.

**Electroencephalography** (e-lek-tro-en-sef-ah-LOG-rah-fe): Process of recording the electricity in the brain.

**Electrolyte** (eh-LEK-tro-lite): Substance that conducts an electrical current and is found in blood (serum) and body cells. Examples are sodium (Na<sup>+</sup>), potassium (K<sup>+</sup>), calcium (Ca<sup>2+</sup>), and chloride (Cl<sup>-</sup>).

**Embolization** (em-bo-lih-ZA-shun): Use of a substance to block or reduce blood flow in a vessel.

**Embolus** (EM-bo-lus): Foreign object (air, tissue, tumor, or clot) that circulates in the bloodstream until it lodges in a vessel.

**Embryo** (EM-bre-o): A new organism in an early stage of development (2 to 6 weeks). From 6 to 38 weeks, the developing infant is a fetus.

**Emergency medicine** (e-MER-jen-se MED-ih-sin): Care of patients requiring immediate action.

**Emphysema** (em-fih-SE-mah): Lung disorder in which air becomes trapped in the air sacs and bronchioles, making breathing difficult. Emphysema is marked by the accumulation of mucus and the loss of elasticity in lung tissue.

**Encephalitis** (en-sef-ah-LI-tis): Inflammation of the brain.

**Encephalopathy** (en-sef-ah-LOP-ah-the): Disease of the brain.

**Endocarditis** (EN-do-kar-DI-tis): Inflammation of the inner lining of the heart (ENDOCARDIUM).

**Endocardium** (en-do-KAR-de-um): Inner lining of the heart.

**Endocrine glands** (EN-do-krin glanz): Organs that produce (secrete) hormones; examples are thyroid, pituitary, and adrenal glands.

**Endocrine system** (EN-do-krin SIS-tem): Endocrine glands.

**Endocrinologist** (en-do-krih-NOL-o-jist): Specialist in the study of endocrine glands and their disorders.

**Endocrinology** (en-do-krih-NOL-o-je): Study of ENDOCRINE GLANDS.

**Endodontist** (en-do-DON-tist): Dentist who specializes in diagnosis and treatment of the inner parts of a tooth (root canal therapy).

**Endometriosis** (en-do-me-tre-O-sis): An abnormal condition in which tissue from the inner lining of the uterus is found outside the uterus, usually in the pelvic cavity.

**Endometrium** (en-do-ME-tre-um): Inner lining of the uterus.

**Endoscope** (EN-do-skope): Instrument used to view a hollow organ or body cavity; a tube fitted with a lens system that allows viewing in different directions.

- Endoscopic retrograde cholangiopancreatography** (en-do-SKOP-ik RET-tro-grade kol-an-je-o-pan-kre-ah-TOG-rah-fe): X-ray images of bile ducts and pancreas after injection of contrast through a catheter from the mouth, esophagus, and stomach into bile and pancreatic ducts.
- Endoscopy** (en-DOS-ko-pe): Process of viewing the inside of hollow organs or cavities with an endoscope.
- Enteric** (en-TER-ik): Pertaining to the small intestine.
- Enteritis** (en-teh-RI-tis): Inflammation of the small intestine.
- Epidermis** (ep-ih-DER-mis): Outer (EPI-) layer of the skin (-DERMIS).
- Epidural hematoma** (ep-ih-DUR-al he-mah-TO-mah): Pathologic mass of blood above the dura mater (outermost layer of membranes surrounding the brain and spinal cord).
- Epiglottis** (ep-ih-GLOT-tis): Flap of cartilage that covers the mouth of the trachea when swallowing occurs so that food cannot enter the airway.
- Epiglottitis** (ep-ih-gloh-TI-tis): Inflammation of the EPIGLOTTIS.
- Epilepsy** (EP-ih-lep-se): Condition in which abnormal electrical activity in the brain results in sudden, fleeting disturbances in nerve cell functioning. An attack of epilepsy is called a SEIZURE.
- Epinephrine** (eh-pih-NEF-rin): Hormone secreted by the adrenal gland in response to stress and physical injury. It is a drug used to treat hypersensitivity reactions (severe allergy), asthma, bronchial spasm, and nasal congestion. Also called ADRENALINE.
- Epithelial** (ep-ih-THE-le-al): Pertaining to skin cells. This term originally described cells upon (EPI-) the breast nipple (THELI-). Now, it indicates cells lining the inner part of internal organs and covering the outside of the body.
- Epithelium** (ep-ih-THE-le-um): Covering of the internal and external tissues of the body (skin, vessels, body cavities, glands, and organs).
- Erythrocyte** (eh-RITH-ro-site): Red blood cell.
- Erythrocytosis** (eh-rith-ro-si-TO-sis): Abnormal condition (slight increase in numbers) of red blood cells.
- Erythromycin** (eh-rith-ro-MI-sin): An antibiotic that is produced from a red (ERYTHR/O-) mold (-MYCIN).
- Esophageal** (eh-sof-ah-JE-al): Pertaining to the esophagus.
- Esophagitis** (eh-sof-ah-JI-tis): Inflammation of the esophagus.
- Esophagoscopy** (eh-sof-ah-GOS-ko-pe): Visual examination of the esophagus.
- Esophagus** (eh-SOF-ah-gus): Tube leading from the throat to the stomach.
- Estrogen** (ES-tro-jen): Hormone that promotes the development of female secondary sex characteristics. Examples are estradiol, estriol, and conjugated estrogen.
- Eustachian tube** (u-STA-she-an tube): Channel connecting the middle part of the ear with the throat.
- Exacerbation** (eg-zas-er-BA-shun): Increase in the seriousness of a disease, with greater intensity in the signs or symptoms.
- Excision** (ek-SIZH-un): Act of cutting out, removing, or resecting.
- Exocrine glands** (EK-so-krin glanz): Glands that produce (secrete) chemicals that leave the body through tubes (ducts). Examples are tear, sweat, and salivary glands.
- Exophthalmic goiter** (ek-sof-THAL-mik GOY-ter): Enlargement of the thyroid gland accompanied by high levels of thyroid hormone in the blood and protrusion of the eyeballs (EXOPHTHALMOS).
- Exophthalmos** (ek-sof-THAL-mos): Abnormal protrusion of eyeballs usually caused by HYPERTHYROIDISM.
- Extracranial** (eks-tra-KRA-ne-al): Pertaining to outside the skull.
- Extrahepatic** (eks-tra-heh-PAT-ik): Pertaining to outside the liver.
- Extrapulmonary** (eks-trah-PUL-mo-nah-re): Outside the lungs.
- Eye** (i): Organ that receives light waves and transmits them to the brain.

## F

**Fallopian tubes** (fah-LO-pe-an toobz): Two tubes that lead from the ovaries to the uterus. They transport egg cells to the uterus; also called uterine tubes.

**Family medicine** (FAM-ih-le MED-ih-sin): Primary care of all members of the family on a continuing basis.

**Family practitioner** (FAM-ih-le prak-TIH-shan-er): Medical doctor responsible for primary care and treatment of patients on a continuing basis.

**Fatigue** (fah-TEEG): State of exhaustion or loss of strength.

**Feces** (FEE-seez): Waste material from the digestive tract that is expelled from the body through the rectum and anus.

**Fellowship training** (FEL-o-ship TRA-ning): Postgraduate training for doctors in specialized fields. The training may include CLINICAL and RESEARCH (laboratory) work.

**Female reproductive system** (FE-male re-pro-DUK-tiv SIS-tem): Organs (OVARIES) that produce and transport (FALLOPIAN TUBES) egg cells and secrete female hormones (ESTROGEN and PROGESTERONE). The system includes the uterus, where the embryo and fetus grow.

**Femur** (FE-mur): Thigh bone.

**Fetus** (FE-tus): Unborn offspring in the uterus after 8 weeks of pregnancy until birth.

**Fibrillation** (fih-brih-LA-shun): Rapid, irregular, involuntary muscular contraction.

Atrial and ventricular fibrillation are cardiac (heart) ARRHYTHMIAS.

**Fibroids** (FI-broydz): Benign growths of muscle tissue in the uterus.

**Fibrosarcoma** (fi-bro-sar-KO-mah): Malignant tumor of fibrous tissue.

**Fibula** (FIB-u-lah): Smaller lower leg bone.

**Fistula** (FIS-tu-lah): Abnormal passageway from an internal organ to the body surface or between two internal organs.

**Fixation** (fik-SA-shun): Act of holding, sewing, or fastening a part in a fixed position.

**Flutter** (FLUT-er): Rapid but regular, abnormal heart muscle contraction. Atrial and ventricular flutter are heart ARRHYTHMIAS.

**Follicle-stimulating hormone** (FOL-ih-kl STIM-u-la-ting HOR-mone): Hormone secreted by the pituitary gland to stimulate the egg cells in the ovaries.

**Fracture** (FRAK-chur): Breaking of a bone.

**Frontal** (FRUN-tal): Pertaining to the front; anterior.

**Frontal plane** (FRUN-tal playn): Vertical plane that divides the body or an organ into front and back portions; the CORONAL PLANE.

**Functional disorder** (FUNG-shih-nal dis-OR-der): Condition in which there are clinical signs and symptoms but no evidence of a structural or biochemical cause.

## G

**Gadolinium** (gad-o-LIN-e-um): Chemical element that is used as a contrast agent in MRI studies. Symbol is Gd.

**Gallbladder** (GAWL-blah-der): Sac below the liver that stores bile and delivers it to the small intestine.

**Ganglion** (GANG-le-on): Benign cyst near a joint (wrist); also, a group of nerve cells (*plural*: ganglia [GANG-le-ah]).

**Gangrene** (GANG-reen): Necrosis (death) of tissue as a result of blood vessel injury, frostbite, or conditions such as diabetes or atherosclerosis. It results from ischemia, deficiency of blood flow caused by narrowing or obstruction of blood vessels.

**Gastralgia** (gas-TRAL-jah): Stomach pain.

**Gastrectomy** (gas-TREK-to-me): Excision (removal) of the stomach.

**Gastric** (GAS-trik): Pertaining to the stomach.

- Gastritis** (gas-TRI-tis): Inflammation of the stomach.
- Gastroenteritis** (gas-tro-en-teh-RI-tis): Inflammation of the stomach and intestines.
- Gastroenterologist** (gas-tro-en-ter-OL-o-jist): Specialist in the treatment of stomach and intestinal disorders.
- Gastroenterology** (gas-tro-en-ter-OL-o-je): Study of the stomach and intestines.
- Gastroesophageal reflux disease** (gas-tro-eh-sof-ah-JE-al RE-flux dih-ZEEZ): Condition marked by backflow (reflux) of contents of the stomach into the esophagus. Abbreviation is GERD.
- Gastrojejunostomy** (gas-tro-jeh-joo-NOS-to-me): New, surgically created opening between the stomach and the jejunum (second part of the small intestine). This procedure is an anastomosis.
- Gastroscope** (GAS-tro-skope): Instrument used to view the stomach. It is passed down the throat and esophagus into the stomach.
- Gastroscoy** (gas-TROS-ko-pe): Visual examination of the stomach.
- Gastrotomy** (gas-TROT-o-me): Incision of the stomach.
- GERD**: See [GASTROESOPHAGEAL REFLUX DISEASE](#).
- Geriatric** (jer-e-AH-trik): Pertaining to treatment of older people.
- Geriatrician** (jer-e-ah-TRISH-an): Specialist in the treatment of diseases of old age.
- Geriatrics** (jer-e-AH-triks): Treatment of disorders of old age.
- Gestation** (jes-TA-shun): Growth of the fetus that occurs during pregnancy.
- Gland**: Group of cells that secretes chemicals to the outside of the body (EXOCRINE GLANDS) or hormones directly into the bloodstream (ENDOCRINE GLANDS).
- Glaucoma** (glaw-KO-mah): Increase of fluid pressure within the eye. Fluid is formed more rapidly than it is removed. The increased pressure damages sensitive cells in the back of the eye, and vision is disturbed.
- Glial cells** (GLI-al selz): Supporting cells of nervous tissue in the brain. Examples are astrocytes and microglial and oligodendroglial cells. These cells are the source of primary brain tumors.
- Glioblastoma** (gli-o-blas-TO-mah): Malignant brain tumor composed of immature (-BLAST) glial (supportive nervous tissue) cells.
- Glucocorticoid** (gloo-ko-KOR-tih-koyd): Hormone secreted by the adrenal gland (cortex) to raise blood sugar levels. Examples are cortisone and cortisol.
- Glycosuria** (gli-ko-SU-re-ah): Abnormal condition of sugar in the urine.
- Goiter** (GOY-ter): Enlargement of the thyroid gland.
- Gonorrhea** (gon-oh-RE-ah): Sexually transmitted disease most often affecting the reproductive and urinary tracts and caused by infection with the bacterium *Neisseria gonorrhoeae*.
- Gout** (gout): See [GOUTY ARTHRITIS](#).
- Gouty arthritis** (GOW-te arth-RI-tis): Deposits of uric acid crystals in joints and other tissues that cause swelling and inflammation of joints. Also called GOUT.
- Graves disease** (grayvz dih-ZEEZ): See [HYPERTHYROIDISM](#).
- Growth hormone** (groth HOR-mone): Hormone secreted by the pituitary gland to stimulate the growth of bones and the body in general. Also called somatotropin.
- Gynecologist** (gi-neh-KOL-o-jist): Specialist in the study of female disorders.
- Gynecology** (gi-neh-KOL-o-je): Study of female disorders.

**H**

- Hair follicle** (hayr FOL-ih-k'l): Pouch-like depression in the skin in which a hair develops.
- Hair root** (hayr root): Part of the hair from which growth occurs.

**Hallucination** (hah-loo-sih-NA-shun): False sensory perception, such as hearing voices when none are present.

**HDL:** See [HIGH-DENSITY LIPOPROTEIN](#).

**Heart** (hart): Hollow, muscular organ in the chest that pumps blood throughout the body.

**Heart attack** (hart ah-TAK): See [MYOCARDIAL INFARCTION](#).

**Hemangioma** (he-man-je-O-mah): Tumor (benign) of blood vessels.

**Hematemesis** (he-mah-TEM-eh-sis): Vomiting (-EMESIS) of blood (HEMAT/O-).

**Hematologist** (he-mah-TOL-o-jist): Specialist in blood and blood disorders.

**Hematology** (he-mah-TOL-o-je): Study of the blood.

**Hematoma** (he-mah-TO-mah): Mass or collection of blood under the skin. Commonly called a bruise or “black-and-blue” mark.

**Hematuria** (he-mah-TUR-e-ah): Abnormal condition of blood in the urine.

**Hemigastrectomy** (heh-me-gas-TREK-to-me): Removal of half of the stomach.

**Hemiglossectomy** (heh-me-glos-EK-to-me): Removal of half of the tongue.

**Hemiplegia** (hem-ih-PLE-jah): Paralysis that affects the right or left side of the body.

**Hemoccult test** (he-mo-KULT test): A standardized test to look for hidden (occult) blood in stool. It is a screening test for colon and rectal cancer. See also [STOOL GUAIAC](#).

**Hemodialysis** (he-mo-di-AL-ih-sis): Use of a kidney machine to filter blood to remove waste materials such as urea. Blood leaves the body, enters the machine, and is carried back to the body through a catheter (tube).

**Hemoglobin** (HE-mo-glo-bin): Oxygen-carrying protein found in red blood cells.

**Hemoptysis** (he-MOP-tih-sis): Spitting up (-PTYSIS) of blood (HEM/O-) from the respiratory tract.

**Hemorrhage** (HEM-or-ij): Bursting forth of blood.

**Hemothorax** (he-mo-THOR-aks): Collection of blood in the chest (pleural cavity).

**Hepatic** (heh-PAT-ik): Pertaining to the liver.

**Hepatitis** (hep-ah-TI-tis): Inflammation of the liver. Viral hepatitis is an acute infectious disease caused by at least three different viruses: hepatitis A, B, and C viruses.

**Hepatocellular carcinoma** (hep-ah-to-SEL-u-lar kar-sih-NO-mah): Malignant tumor of the liver.

**Hepatoma** (hep-ah-TO-mah): Tumor (malignant) of the liver; HEPATOCELLULAR CARCINOMA.

**Hepatomegaly** (hep-ah-to-MEG-ah-le): Enlargement of the liver.

**Hernia** (HER-ne-ah): Bulge or protrusion of an organ or part of an organ through the wall of the cavity that usually contains it. In an [INGUINAL](#) hernia, part of the wall of the abdomen weakens and the intestine bulges outward or into the [SCROTAL](#) sac (in males).

**Herpes genitalis** (HER-pee-z jen-ih-TAL-is): Chronic sexually transmitted disease caused by type 2 herpes simplex virus.

**Hiatal hernia** (hi-A-tal HER-ne-ah): Upward protrusion of the wall of the stomach into the lower part of the esophagus.

**High-density lipoprotein** (hi DEN-sih-te li-po-PRO-teen): Combination of fat and protein in the blood. It carries cholesterol to the liver, which is beneficial.

**Hilum** (HI-lum): Depression at that part of an organ where blood vessels and nerves enter.

**HIV:** See [HUMAN IMMUNODEFICIENCY VIRUS](#).

**Hodgkin lymphoma** (HOJ-kin lim-FO-mah): Malignant tumor of lymph nodes.

**Hormone** (HOR-mone): Chemical made by a gland and sent directly into the bloodstream, not to the outside of the body. [ENDOCRINE GLANDS](#) produce hormones.

**Hospitalist** (HOS-pih-tah-list): A physician whose primary focus is hospital medicine. This includes patient care, teaching, and research related to hospital care.

- Human immunodeficiency virus** (HYOO-man im-u-no-deh-FISH-en-se VI-rus): Virus that infects white blood cells (T-cell lymphocytes), causing damage to the patient's immune system. It is the cause of AIDS. Abbreviated HIV.
- Humerus** (HYOO-mer-us): Upper arm bone.
- Hydrocele** (HI-dro-seel): Swelling of the SCROTUM caused by a collection of fluid within the outermost covering of the TESTIS.
- Hyperbilirubinemia** (hi-per-bil-ih-roo-bin-E-me-ah): High levels of bilirubin (pigment released from hemoglobin breakdown and processed in the liver) in the bloodstream. See JAUNDICE.
- Hyperglycemia** (hi-per-gli-SE-me-ah): High blood sugar.
- Hyperparathyroidism** (hi-per-par-ah-THI-royd-ism): Higher than normal level of parathyroid hormone in the blood.
- Hyperplasia** (hi-per-PLA-ze-ah): Cells increase in number. The prostate gland is enlarged in benign prostatic hyperplasia (BPH).
- Hyperplastic** (hi-per-PLAS-tik): Pertaining to excessive growth of normal cells in an organ.
- Hypersecretion** (hi-per-se-KRE-shun): Abnormally high production of a substance.
- Hypertension** (hi-per-TEN-shun): High blood pressure. *Essential hypertension* has no known cause, but contributing factors are age, obesity, smoking, and heredity. *Secondary hypertension* is a sign of other disorders such as kidney disease.
- Hyperthyroidism** (hi-per-THI-royd-izm): Excessive activity of the thyroid gland.
- Hypertrophy** (hi-PER-tro-fe): Enlargement or overgrowth of an organ or part of the body as a result of an increase in size of individual cells.
- Hypochondriac** (hi-po-KON-dre-ak): Pertaining to lateral regions of the upper abdomen beneath the lower ribs. Also, the term describes a person who has chronic concern about their health and body functions.
- Hypodermic** (hi-po-DER-mik): Pertaining to under or below the skin.
- Hypoglycemia** (hi-po-gli-SE-me-ah): Low blood sugar.
- Hypophyseal** (hi-po-FIZ-e-al): Pertaining to the pituitary gland.
- Hypopituitarism** (hi-po-pih-TOO-ih-tah-rizm): Decrease or stoppage of hormonal secretion by the pituitary gland.
- Hypoplastic** (hi-po-PLAS-tik): Pertaining to underdevelopment of a tissue or organ in the body.
- Hyposecretion** (hi-po-se-KRE-shun): Abnormally low production of a substance.
- Hypotensive** (hi-po-TEN-siv): Pertaining to low blood pressure or to a person with abnormally low blood pressure.
- Hypothyroidism** (hi-po-THI-royd-izm): Less than normal activity of the thyroid gland.
- Hysterectomy** (his-teh-REK-to-me): Excision of the uterus, either through the abdominal wall (abdominal hysterectomy) or through the vagina (vaginal hysterectomy).
- Hysteroscopy** (his-ter-OS-ko-pe): Visual examination of the uterus with an endoscope inserted through the vagina and uterine cervix.

## I

- Iatrogenic** (i-ah-tro-JEN-ik): Pertaining to an adverse condition that results from a medical or surgical treatment.
- Ileostomy** (il-e-OS-to-me): New opening of the ILEUM to the outside of the body.
- Ileum** (IL-e-um): Third part of the small intestine.
- Ilium** (IL-e-um): Side, high portion of the hip bone (pelvis).
- Incision** (in-SIZH-un): Cutting into the body or into an organ.
- Infarction** (in-FARK-shun): Area of dead tissue (necrosis) caused by decreased blood flow to that part of the body. Also called *infarct*.

- Infectious disease specialist** (in-FEK-shus dih-ZEEZ SPESH-ah-list): Physician who treats disorders caused and spread by microorganisms such as bacteria.
- Infiltrate** (IN-fil-trat): Material that accumulates in an organ. The term infiltrate often describes solid material or fluid collection in the lungs.
- Inflammatory bowel disease** (in-FLAM-ah-tor-e BOW-el dih-ZEEZ): Disorder marked by inflammation of the small and large intestines with bouts of diarrhea, abdominal cramping, and fever. Inflammatory bowel diseases include CROHN DISEASE and ULCERATIVE COLITIS.
- Inguinal** (IN-gwih-nal): Pertaining to the groin, or the area where the legs meet the body. Inguinal lymph nodes are located in the groin.
- Insulin** (IN-su-lin): Hormone produced by the pancreas and released into the bloodstream. Insulin allows sugar to leave the blood and enter body cells.
- Insulin pump** (IN-su-lin pump): Portable, battery-powered device that delivers insulin through the abdominal wall in measured amounts.
- Internal medicine** (in-TER-nal MED-ih-sin): Branch of medicine specializing in the diagnosis of disorders and treatment with drugs.
- Intervertebral** (in-ter-VER-teh-bral): Pertaining to lying between two backbones. A disc (disk) is an intervertebral structure.
- Intra-abdominal** (in-trah-ab-DOM-ih-nal): Pertaining to within the abdomen.
- Intracranial** (in-trah-KRA-ne-al): Pertaining to within the skull.
- Intrauterine** (in-trah-U-ter-in): Pertaining to within the uterus.
- Intravenous** (in-trah-VE-nus): Pertaining to within a vein.
- Intravenous pyelogram** (in-trah-VE-nus PI-eh-lo-gram): X-ray record of the kidney (PYEL/O- means renal pelvis) after contrast is injected into a vein.
- Intravesical** (in-trah-VES-ih-kal): Pertaining to within the urinary bladder.
- Iris** (I-ris): Colored (pigmented) portion of the eye.
- Irritable bowel syndrome** (IR-ih-tah-b'l BOW-el SYN-droh-m): A FUNCTIONAL DISORDER of the bowel marked by abdominal pain, discomfort, and bloating, but without evidence of detectable lesions or cause.
- Ischemia** (is-KE-me-ah): Deficiency of blood flow to a part of the body, caused by narrowing or obstruction of blood vessels. Ischemia may lead to necrosis (death of cells).

**J**

- Jaundice** (JAWN-dis): Orange-yellow coloration of the skin and other tissues. A symptom caused by accumulation of BILIRUBIN (pigment) in the blood.
- Jejunum** (jeh-JOO-num): Second part of the small intestine.
- Joint** (joynt): Place where two or more bones come together (articulate).

**K**

- Kidney** (KID-ne): One of two organs located behind the abdomen that produce urine by filtering wastes from the blood.

**L**

- Laminectomy** (lah-mih-NEK-to-me): Removal of a piece of backbone (lamina) to relieve pressure on nerves from a herniating disk (disc).
- Laparoscope** (LAP-ah-ro-scope): Instrument to visually examine the abdomen. An endoscope is inserted through a small incision in the abdominal wall.

- Laparoscopic appendectomy** (lap-ah-ro-SKOP-ik ah-pen-DEK-to-me): Removal of the appendix through a small incision in the abdomen and with the use of a laparoscope.
- Laparoscopic cholecystectomy** (lap-ah-ro-SKOP-ik ko-leh-sis-TEK-to-me): Removal of the gallbladder through a small incision in the abdomen and with the use of a laparoscopic instrument.
- Laparoscopic surgery** (lap-ah-ro-SKOP-ik SUR-jer-e): Removal of organs or tissues via instruments inserted into the abdomen through small incisions. Also called MINIMALLY INVASIVE SURGERY or keyhole surgery.
- Laparoscopy** (lap-ah-ROS-ko-pe): Visual examination of the abdomen. Small incisions are made near the navel, and an instrument (endoscope or laparoscope) is inserted to view abdominal organs.
- Laparotomy** (lap-ah-ROT-o-me): Incision of the abdomen. A surgeon makes a large incision across the abdomen to examine and operate on its organs.
- Large intestine** (larj in-TES-tin): Part of the intestine that receives undigested material from the small intestine and transports it out of the body; the COLON.
- Laryngeal** (lah-rin-JE-al): Pertaining to the LARYNX (voice box).
- Laryngectomy** (lah-rin-JEK-to-me): Removal of the LARYNX (voice box).
- Laryngitis** (lah-rin-JI-tis): Inflammation of the LARYNX.
- Laryngoscopy** (lar-in-GOS-ko-pe): Visual examination of the interior of the voice box (LARYNX) with an endoscope.
- Laryngotracheitis** (lah-ring-o-tra-ke-I-tis): Inflammation of the larynx and the trachea (windpipe).
- Larynx** (LAR-inks): Voice box; located at the top of the trachea and containing vocal cords.
- Lateral** (LAT-er-al): Pertaining to the side.
- LDL**: See [LOW-DENSITY LIPOPROTEIN](#).
- Leiomyoma** (li-o-mi-O-mah): Benign tumor derived from smooth (involuntary or visceral) muscle, most often of the uterus (leiomyoma uteri). LEIOMY/O- means smooth muscle.
- Leiomyosarcoma** (li-o-mi-o-sar-KO-mah): Malignant tumor of smooth (involuntary) muscle.
- Lens** (lenz): Transparent elastic structure behind the iris and pupil of the eye. The lens bends light rays so that they are properly focused on the RETINA at the back of the eye.
- Lesion** (LE-zhun): Abnormal tissue, usually damaged by disease or trauma. From the Latin *laesio*, meaning “injury.”
- Leukemia** (loo-KE-me-ah): Increase in malignant (cancerous) white blood cells (in blood and bone marrow).
- Leukocyte** (LOO-ko-site): White blood cell.
- Leukocytosis** (loo-ko-si-TO-sis): Abnormal condition of white blood cells. This is a slight increase in numbers of normal white blood cells in response to infection.
- Ligament** (LIG-ah-ment): Connective tissue that joins bones to other bones.
- Ligamentous** (lig-ah-MEN-tus): Pertaining to a LIGAMENT.
- Liposarcoma** (li-po-sar-KO-mah): Malignant tumor of fatty tissue.
- Lithotripsy** (LITH-o-trip-se): Process of crushing a stone in the urinary tract using ultrasonic vibrations. Also called extracorporeal shock-wave lithotripsy (ESWL).
- Liver** (LIV-er): Organ in the right upper quadrant of the abdomen. The liver produces BILE, stores sugar, and produces blood-clotting proteins.
- Lobe** (lobe): Part of an organ, especially of the brain, lungs, or glands.
- Low-density lipoprotein** (lo DEN-sih-te li-po-PRO-teen): Combination of lipid (fat) and protein. It has a high CHOLESTEROL content and is associated with formation of plaques in arteries.
- Lower gastrointestinal (GI) series** (LO-er gas-tro-in-TES-tin-al SER-eez): Barium is injected into the anus and rectum, and x-rays are taken of the colon (large intestine).

- Lumbar** (LUM-bar): Pertaining to the loins; part of the back and sides between the chest and the hip.
- Lumbar puncture** (LUM-bar PUNK-cher): Removal of cerebrospinal fluid (CSF) for diagnostic analysis or occasionally as treatment to relieve increased intracranial pressure.
- Lumbar region** (LUM-bar RE-jun): Pertaining to the 5 backbones that lie between the thoracic (chest) and sacral (lower back) vertebrae.
- Lumbar vertebra** (LUM-bar VER-teh-brah): Backbone in the region between the chest and lower back.
- Lung** (lung): One of two paired organs in the chest through which oxygen enters and carbon dioxide leaves the body.
- Lung capillaries** (lung KAP-ih-layr-eez): Tiny blood vessels surrounding lung tissue and through which gases pass into and out of the bloodstream.
- Lupus erythematosus**: See [SYSTEMIC LUPUS ERYTHEMATOSUS](#).
- Lymph** (limf): Clear fluid that is found in lymph vessels and produced from fluid surrounding cells. Lymph contains white blood cells (lymphocytes) that fight disease.
- Lymphadenectomy** (limf-ah-deh-NEK-to-me): Removal of LYMPH NODES.
- Lymphadenopathy** (lim-fad-eh-NOP-ah-the): Disease of lymph nodes (glands).
- Lymphangiectasis** (limf-an-je-EK-tah-sis): Dilation (-ECTASIS) of small lymph vessels; often resulting from obstruction in large lymph vessels.
- Lymphatic system** (lim-FAT-ik SIS-tem): Group of organs (lymph vessels, lymph nodes, spleen, thymus) composed of lymphatic tissue that produce lymphocytes to defend the body against foreign organisms.
- Lymphatic vessels** (lim-FAT-ik VES-elz): Tubes that carry lymph from tissues to the bloodstream (into a vein in the neck region); lymph vessels.
- Lymphedema** (limf-ah-DE-mah): Accumulation of fluid in tissue spaces, causing swelling. Lymphedema is caused by the obstruction of lymph nodes or vessels.
- Lymph node** (limf node): Stationary collection of lymph cells, found all over the body. Lymph nodes are sometimes called lymph “glands.”
- Lymphocyte** (LIMF-o-site): White blood cell that is found within lymph and lymph nodes. T cells and B cells are types of lymphocytes.
- Lymphoid** (LIM-foid): Resembling or pertaining to lymphatic tissue.
- Lymphoma** (lim-FO-mah): Malignant tumor of lymphatic tissue. Previously called lymphosarcoma. There are several types, including Hodgkin lymphoma and non-Hodgkin lymphoma.

## M

- Magnetic resonance imaging** (mag-NET-ik REZ-o-nans IM-aj-ing): Image of the body with magnetic and radio waves. Organs are seen in three planes: coronal (front to back), sagittal (side to side), and transverse (cross-section). Also called MRI.
- Male reproductive system** (male re-pro-DUK-tiv SIS-tem): Organs that produce sperm cells and male hormones.
- Malignant** (mah-LIG-nant): Cancerous tumors that invade and spread to distant organs; tending to become progressively worse.
- Mammary** (MAM-er-e): Pertaining to the breast.
- Mammogram** (MAM-o-gram): X-ray record of the breast.
- Mammography** (mam-MOG-ra-fe): X-ray recording (imaging) of the breast.
- Mammoplasty** (MAM-o-plas-te): Surgical repair (reconstruction) of the breast.
- Mastectomy** (mas-TEK-to-me): Removal (excision) of the breast.
- Mastitis** (mas-TI-tis): Inflammation of the breast.
- Mediastinal** (me-de-ah-STI-nal): Pertaining to the MEDIASTINUM.

- Mediastinoscopy** (me-de-ah-sti-NOS-ko-pe): Visual examination of the mediastinum with an endoscope.
- Mediastinum** (me-de-ah-STI-num): Space between the lungs in the chest. The mediastinum contains the heart, large blood vessels, trachea, esophagus, thymus gland, and lymph nodes.
- Medulla oblongata** (meh-DUL-ah ob-lon-GAh-tah): Lower part of the brain near the spinal cord. The medulla oblongata controls breathing and the heartbeat.
- Medullary** (MEH-du-lar-e): Pertaining to the inner, or soft, part of an organ.
- Melanocytes** (meh-LA-no-sites): Pigmented cells in the lower portion of the epidermis. They produce a dark pigment called melanin.
- Melanoma** (meh-lah-NO-mah): Malignant tumor arising from pigmented cells (melanocytes) in the skin. A melanoma usually develops from a NEVUS (mole).
- Meninges** (meh-NIN-jeez): Membranes surrounding the brain and spinal cord.
- Meningitis** (men-in-JI-tis): Inflammation of the meninges (membranes around the brain and spinal cord).
- Menorrhagia** (men-or-RA-jah): Excessive bleeding from the uterus during the time of MENSTRUATION.
- Menorrhea** (men-o-RE-ah): Normal discharge of blood and tissue from the uterine lining during MENSTRUATION.
- Menses** (MEN-seez): Menstruation; menstrual period.
- Menstruation** (men-stroo-A-shun): Breakdown of the lining of the uterus that occurs every 4 weeks during the active reproductive period of a female.
- Mesothelioma** (mez-o-the-le-O-mah): Malignant tumor of the lining tissue (mesothelium) of the pleura. A mesothelioma is associated with exposure to asbestos.
- Metacarpals** (met-ah-KAR-palz): Bones of the hand between the wrist bones (carpals) and the finger bones (phalanges).
- Metastasis** (meh-TAS-tah-sis): Spread of a cancerous tumor to a distant organ or location. *Metastasis* literally means change (META-) of place (-STASIS). *Metastatic* means pertaining to a metastasis.
- Metatarsals** (meh-tah-TAR-salz): Foot bones.
- Microscopic discectomy** (mi-cro-SCOP-ic dis-KEK-to-me): Surgical removal of a herniated intervertebral disc.
- Migraine** (MI-grayn): Attack of headache, usually on one side of the head, caused by changes in blood vessel size and accompanied by nausea, vomiting, and sensitivity to light (photophobia). This term is from the French word *migraine*, meaning “severe head pain.”
- Minimally invasive surgery** (MIN-ih-mah-le in-VA-siv SUR-jer-e): Removal and repair of organs and tissues with small incisions for an endoscope and instruments. Examples are laparoscopic cholecystectomy (gallbladder removal), laparoscopic appendectomy (appendix removal), laparoscopic herniorrhaphy (repair of a hernia), and laparoscopic colectomy (removal of a portion of the colon).
- Mitral valve prolapse** (MI-tral valv PRO-laps): Protrusion of one or both cusps of the mitral valve back into the left atrium when the ventricles contract.
- Monocyte** (MON-o-site): White blood cell with one large nucleus.
- Mononucleosis** (mon-o-nu-kle-O-sis): Acute infectious disease with excess monocytes in the blood and usually associated with extreme fatigue. Mononucleosis is caused by the Epstein-Barr virus and is transmitted by direct oral (mouth) contact.
- Mouth** (mowth): The opening that forms the beginning of the digestive system.
- MRI**: See [MAGNETIC RESONANCE IMAGING](#).
- Mucus** (MU-kus): Sticky secretion from mucous membranes and glands.
- Multiple myeloma** (MUL-tih-pul mi-eh-LO-mah): Malignant tumor of the bone marrow.

- Multiple sclerosis** (MUL-tih-pul skleh-RO-sis): Chronic neurologic disease in which there are patches of demyelination (loss of myelin sheath covering on nerve cells) throughout the brain and spinal cord. Weakness, abnormal sensations, incoordination, and speech and visual disturbances are symptoms.
- Muscle** (MUS-el): Connective tissue that contracts to make movement possible.
- Muscular** (MUS-ku-lar): Pertaining to muscles.
- Muscular dystrophy** (MUS-ku-lar DIS-tro-fe): Group of degenerative muscle diseases that cause crippling because muscles are gradually weakened and eventually ATROPHY (shrink).
- Musculoskeletal system** (mus-ku-lo-SKEL-eh-tal SIS-tem): Organs that support the body and allow it to move, including the muscles, bones, joints, and connective tissues.
- Myalgia** (mi-AL-jah): Pain in a muscle or muscles.
- Myelitis** (mi-eh-LI-tis): Inflammation of the spinal cord.
- Myelin sheath** (MI-eh-lin sheeth): Fatty covering around part (axon) of nerve cells. The myelin sheath insulates the nerve, helping to speed the conduction of nerve impulses.
- Myelodysplasia** (mi-eh-lo-dis-PLA-ze-ah): Abnormal development of bone marrow, a premalignant condition leading to leukemia.
- Myelogram** (MI-eh-lo-gram): X-ray image of the spinal cord after contrast is injected within the membranes surrounding the spinal cord in the lumbar area of the back.
- Myelography** (mi-eh-LOG-rah-fe): X-ray imaging of the spinal cord after injection of contrast material.
- Myeloma** (mi-eh-LO-mah): Malignant tumor originating in the bone marrow (MYEL/O-). Also called MULTIPLE MYELOMA.
- Myocardial** (mi-o-KAR-de-al): Pertaining to the muscle of the heart.
- Myocardial infarction** (mi-o-KAR-de-al in-FARK-shun): Death of tissue in heart muscle; also known as a heart attack or an MI.
- Myocardial ischemia** (mi-o-KAR-de-al is-KE-me-ah): Decrease in the blood supply to the heart muscle.
- Myoma** (mi-O-mah): Tumor (benign) of muscle.
- Myomectomy** (mi-o-MEK-to-me): Removal of a benign muscle tumor (fibroid).
- Myosarcoma** (mi-o-sar-KO-mah): Tumor (malignant) of muscle. SARC- means flesh, indicating that the tumor is of connective or “fleshy” tissue origin.
- Myositis** (mi-o-SI-tis): Inflammation of a muscle.
- Myringotomy** (mir-in-GOT-o-me): Incision of the eardrum.

## N

- Nasal** (NA-zl): Pertaining to the nose.
- Nausea** (NAW-se-ah): Unpleasant sensation in the upper abdomen, often leading to vomiting. The term comes from the Greek *nausia*, meaning “seasickness.”
- Necropsy** (NEH-krop-se): Examination of a dead body, usually in veterinary science, to determine the cause of death; POSTMORTUM.
- Necrosis** (neh-KRO-sis): Death of cells.
- Necrotic** (neh-KRO-tik): Pertaining to death of cells.
- Needle biopsy** (NE-d’l BI-op-se): Removal of living tissue for microscopic examination by inserting a hollow needle through the skin.
- Neonatal** (ne-o-NA-tal): Pertaining to new birth; the first 4 weeks after birth.
- Neoplasm** (NE-o-plazm): Any new growth of tissue; a tumor.
- Neoplastic** (ne-o-PLAS-tik): Pertaining to a new growth, or NEOPLASM.
- Nephrectomy** (neh-FREK-to-me): Removal (excision) of a kidney.
- Nephritis** (neh-FRI-tis): Inflammation of kidneys.
- Nephrolithiasis** (neh-fro-lih-THI-ah-sis): Condition of kidney stones.

- Nephrologist** (neh-FROL-o-jist): Specialist in the diagnosis and treatment of kidney diseases.
- Nephrology** (neh-FROL-o-je): Study of the kidney and its diseases.
- Nephropathy** (neh-FROP-ah-the): Disease of the kidney.
- Nephrosis** (neh-FRO-sis): Abnormal condition of the kidney. Nephrosis is often associated with a deterioration of the kidney tubules.
- Nephrostomy** (neh-FROS-to-me): Opening from the kidney to the outside of the body.
- Nervous system** (NER-vus SIS-tem): Organs (brain, spinal cord, and nerves) that transmit electrical messages throughout the body.
- Neural** (NU-ral): Pertaining to nerves.
- Neuralgia** (nu-RAL-jah): Nerve pain.
- Neuritis** (nu-RI-tis): Inflammation of nerves.
- Neuroglial cells** (nu-ro-GLE-al selz): See [GLIAL CELLS](#).
- Neurologist** (nu-ROL-o-jist): Specialist in the diagnosis and treatment of nervous disorders.
- Neurology** (nu-ROL-o-je): Study of the nervous system and nerve disorders.
- Neuropathy** (nu-ROP-ah-the): Disease of nervous tissue.
- Neurosurgeon** (nu-ro-SUR-jun): Physician who operates on the organs of the nervous system (brain, spinal cord, and nerves).
- Neurotomy** (nu-ROT-o-me): Incision of a nerve.
- Nevus** (NE-vus): Pigmented lesion on the skin (plural: nevi); a mole.
- Nitroglycerin** (ni-tro-GLIS-er-in): Drug that relaxes muscle and opens blood vessels.
- Nocturia** (nok-TU-re-ah): Excessive urination at night.
- Nose** (noz): Structure that is the organ of smell and permits air to enter and leave the body.
- Nosocomial** (nos-o-KO-me-al): Pertaining to or originating in a hospital. A *nosocomial infection* is acquired during hospitalization.

## O

- Obstetric** (ob-STEh-trik): Pertaining to pregnancy, labor, and delivery of a baby.
- Obstetrician** (ob-steh-TRISH-an): Specialist in the delivery of a baby and care of the mother during pregnancy and labor.
- Obstetrics** (ob-STET-riks): Practice or branch of medicine concerned with the management of women during pregnancy, childbirth, and the period just after delivery of the infant.
- Ocular** (OK-u-lar): Pertaining to the eye.
- Oncogenic** (ong-ko-JEN-ik): Pertaining to producing (-GENIC) tumors.
- Oncologist** (ong-KOL-o-jist): Physician specializing in the study and treatment of cancerous tumors.
- Oncology** (ong-KOL-o-je): Study of tumors.
- Onycholysis** (on-ih-KOL-ih-sis): Separating (-LYSIS) of a nail (ONYCH/O) from its foundation (bed).
- Oocyte** (o-o-site): Egg cell (ovum).
- Oophorectomy** (o-of-o-REK-to-me or oo-fo-REK-to-me): Removal of an ovary or ovaries.
- Oophoritis** (o-of-o-RI-tis or oo-pho-RI-tis): Inflammation of an ovary.
- Ophthalmologist** (of-thal-MOL-o-jist): Specialist in the study of the eye and the treatment of eye disorders.
- Ophthalmology** (of-thal-MOL-o-je): Study of the eye; the diagnosis and treatment of eye disorders.
- Ophthalmoscope** (of-THAL-mo-scope): Instrument used to visually examine the eyes.
- Optic nerve** (OP-tik nerv): Nerve in the back of the eye that transmits light waves to the brain.

- Optician** (op-TISH-an): Nonmedical specialist trained to provide eyeglasses by filling prescriptions.
- Optometrist** (op-TOM-eh-trist): Nonmedical specialist trained to examine and test eyes and prescribe corrective lenses.
- Oral** (OR-al): Pertaining to the mouth.
- Orchidectomy** (or-kih-DEK-to-me): Removal (excision) of a testis (testicle).
- Orchiectomy** (or-ke-EK-to-me): Removal (excision) of a testicle or testicles.
- Orchiopexy** (or-ke-o-PEK-se): Surgical fixation of the testicle (testis) into its proper location within the scrotum. This surgery corrects CRYPTORCHISM.
- Orchitis** (or-KI-tis): Inflammation of a testicle.
- Organ** (OR-gan): Independent part of the body composed of different tissues working together to do a specific job.
- Orthodontist** (or-tho-DON-tist): Dentist specializing in straightening teeth.
- Orthopedist** (or-tho-PE-dist): Specialist in the surgical correction of musculoskeletal disorders. This physician was originally concerned with straightening (ORTH/O) bones in the legs of children (PED/O) with deformities.
- Osteitis** (os-te-I-tis): Inflammation of bone.
- Osteoarthritis** (os-te-o-ar-THRI-tis): Inflammation of bones and joints. Osteoarthritis is a disease of older people and is marked by stiffness, pain, and degeneration of joints.
- Osteogenic sarcoma** (os-te-o-JEN-ik sar-KO-mah): Malignant (cancerous) tumor of bone (-GENIC means produced in).
- Osteoma** (os-te-O-mah): Tumor (benign) of bone.
- Osteomyelitis** (os-te-o-mi-eh-LI-tis): Inflammation of bone and bone marrow. Osteomyelitis is caused by a bacterial infection.
- Osteopenia** (os-te-o-PE-ne-ah): Deficiency (-PENIA) of bone tissue.
- Osteoporosis** (os-te-o-po-RO-sis): Decrease in bone mass with formation of pores or spaces in normally mineralized bone tissue. This condition is more serious than osteopenia.
- Osteotomy** (os-te-OT-o-me): Incision of a bone.
- Otalgia** (o-TAL-jah): Pain in an ear.
- Otitis** (o-TI-tis): Inflammation of an ear.
- Otolaryngologist** (o-to-lah-rin-GOL-o-jist): Specialist in the treatment of diseases of the ear, nose, and throat.
- Ovarian** (o-VAYR-e-an): Pertaining to an ovary or ovaries.
- Ovarian cancer** (o-VAYR-e-an KAN-ser): Malignant condition of the ovaries.
- Ovarian cyst** (o-VAYR-e-an sist): Sac containing fluid or semisolid material in or on the ovary.
- Ovary** (O-vah-re): One of two organs in the female abdomen that produces egg cells and female hormones.
- Ovum** (O-vum): Egg cell (*plural*: ova [O-vah]).
- Oxygen** (OK-sih-jen): Colorless, odorless gas that is essential to sustaining life.

## P

- Pancreas** (PAN-kre-us): Gland that produces digestive juices (exocrine function) and the hormone INSULIN (endocrine function).
- Pancreatectomy** (pan-kre-ah-TEK-to-me): Removal of the pancreas.
- Pancreatitis** (pan-kre-ah-TI-tis): Inflammation of the pancreas.
- Pap Smear** (PAP smeer): Insertion of an instrument (spatula) into the vagina to obtain a sample of cells from the cervix (neck of the uterus).
- Paralysis** (pah-RAL-ih-sis): Loss or impairment of movement in a part of the body.

- Paraplegia** (par-ah-**PLE**-jah): Impairment or loss of movement in the lower part of the body, primarily the legs and in some cases bowel and bladder function.
- Parathyroid glands** (par-ah-**THI**-royd glanz): Four endocrine glands behind the thyroid gland. These glands are concerned with maintaining the proper levels of calcium in the blood and bones.
- Parathyroid hormone** (par-ah-**THI**-roid **HOR**-mone): Hormone secreted by the parathyroid glands to maintain a constant concentration of calcium in the blood and bones. Also called PTH.
- Patella** (pah-**TEL**-ah): Kneecap.
- Pathogen** (**PATH**-o-jen): Disease-producing organism (such as a bacterium or virus).
- Pathologist** (pah-**THOL**-o-jist): Specialist in the study of disease. A pathologist examines biopsies and performs autopsies.
- Pathology** (pah-**THOL**-o-je): Study of disease.
- Pediatric** (pe-de-**AT**-rik): Pertaining to treatment of a child.
- Pediatrician** (pe-de-ah-**TRISH**-un): Specialist in the treatment of childhood diseases.
- Pediatrics** (pe-de-**AT**-riks): Branch of medicine specializing in the treatment of children.
- Pedodontist** (ped-o-**DON**-tist): Dentist specializing in the diagnosis and treatment of children's dental problems.
- Pelvic** (**PEL**-vik): Pertaining to the bones of the hip area.
- Pelvic cavity** (**PEL**-vik **KAV**-ih-te): Space contained within the hip bones (front and sides) and the lower part of the backbone (sacrum and coccyx).
- Pelvic inflammatory disease** (**PEL**-vik in-**FLAM**-ah-to-re dih-**ZEEZ**): Inflammation of the pelvic region in females, usually involving the **FALLOPIAN TUBES**.
- Pelvic ultrasonography** (**PEL**-vik ul-trah-so-**NOG**-rah-fe): Recording of sound waves as they impact organs in the region of the hip.
- Pelvis** (**PEL**-vis): Lower part of the trunk of the body including the hip bone, tailbone, and sacrum (lower backbones).
- Penicillin** (pen-ih-**SIL**-in): Substance, derived from certain molds, that can destroy bacteria; an **ANTIBIOTIC**.
- Penis** (**PE**-nis): External male organ containing the urethra, through which both urine and semen (sperm cells and fluid) leave the body.
- Peptic ulcer** (**PEP**-tik **UL**-ser): Sore (lesion) of the mucous membrane lining the first part of the small intestine (duodenum) or lining the stomach.
- Percutaneous** (per-ku-**TA**-ne-us): Pertaining to through the skin.
- Percutaneous transhepatic cholangiography** (per-ku-**TA**-ne-us trans-heh-**PAT**-ik kol-an-je-**OG**-rah-fe): Bile vessels are imaged after injection of contrast material through the skin into the liver.
- Perianal** (peh-re-**A**-nal): Pertaining to surrounding the **ANUS**.
- Pericardium** (peh-rih-**KAR**-de-um): Membrane surrounding the heart.
- Periodontist** (peh-re-o-**DON**-tist): Dentist specializing in the treatment of gum disease (surrounding a tooth).
- Periosteum** (peh-re-**OS**-te-um): Membrane that surrounds bone.
- Peritoneal** (peh-rih-to-**NE**-al): Pertaining to the **PERITONEUM**.
- Peritoneal dialysis** (peh-rih-to-**NE**-al di-**AL**-ih-sis): Process of removing wastes from the blood by introducing a special fluid into the abdomen (peritoneal cavity). The wastes pass into the fluid from the bloodstream, and then the fluid is drained from the body.
- Peritoneal fluid** (peh-rih-to-**NE**-al **FLOO**-id): Fluid produced in the abdominal cavity.
- Peritoneoscopy** (peh-rih-to-ne-**OS**-ko-pe): Visual examination of the peritoneal cavity with an endoscope. See **LAPAROSCOPY**.
- Peritoneum** (peh-rih-to-**NE**-um): Membrane that surrounds the abdomen and holds the abdominal organs in place.
- Peritonitis** (peh-rih-to-**NI**-tis): Inflammation of the peritoneum.

**Phalanges** (fah-LAN-jeez): Finger and toe bones.

**Pharyngeal** (fah-rin-JE-al): Pertaining to the pharynx (throat).

**Pharyngitis** (fah-rin-JI-tis): Inflammation of the pharynx (throat).

**Pharynx** (FAR-inks): Organ behind the mouth that receives swallowed food and delivers it into the esophagus. The pharynx (throat) also receives air from the nose and passes it to the trachea (windpipe).

**Phenothiazine** (fe-no-THI-ah-zeen): Substance whose derivatives are used as tranquilizers and antipsychotic agents to treat mental illness.

**Phlebitis** (fleh-BI-tis): Inflammation of a vein.

**Phlebography** (fleh-BOG-rah-fe): X-ray examination of veins after injection of contrast material.

**Phlebotomy** (fleh-BOT-o-me): Incision of a vein.

**Photoselective vaporization of the prostate** (fo-to-se-LEK-tiv va-por-ih-ZA-shun of the PROS-tate): Use of a GreenLight® laser to vaporize and remove prostatic tissue to treat benign prostatic hyperplasia.

**Phrenic** (FREH-nik): Pertaining to the DIAPHRAGM.

**Physical medicine and rehabilitation** (FIZ-ih-kal MED-ih-sin and re-hah-bil-ih-TA-shun): Field of medicine that specializes in restoring the function of the body after illness.

**Pilosebaceous** (pi-lo-seh-BA-shus): Pertaining to hair and its associated sebaceous gland.

**Pineal gland** (pi-NE-al gland): Small endocrine gland within the brain that secretes the hormone melatonin, whose exact function is unclear. In lower animals, the pineal gland is a receptor for light.

**Pituitary gland** (pih-TOO-ih-tar-e gland): Organ at the base of the brain that secretes hormones. These hormones enter the blood to regulate other organs and other endocrine glands.

**Platelet** (PLAYT-let): Clotting cell; a thrombocyte.

**Pleura** (PLOO-rah): Double membrane that surrounds the lungs. *Pleural* means pertaining to the pleura.

**Pleural cavity** (PLOO-ral KAH-vih-te): Space between each pleura surrounding the lung.

**Pleural effusion** (PLOO-ral e-FU-zhun): Collection of fluid between the double membrane surrounding the lungs.

**Pleurisy** (PLOO-rih-se): Inflammation of the PLEURA.

**Pleuritis** (plo-RI-tis): Inflammation of the PLEURA.

**Pneumoconiosis** (noo-mo-ko-ne-O-sis): Group of lung diseases resulting from inhalation of particles of dust such as coal, with permanent deposition of such particles in the lung.

**Pneumonectomy** (noo-mo-NEK-to-me): Removal of a lung.

**Pneumonia** (noo-MO-ne-ah): Abnormal condition of the lungs marked by inflammation and collection of material within the air sacs of the lungs.

**Pneumonitis** (noo-mo-NI-tis): Inflammation of a lung or lungs.

**Pneumothorax** (noo-mo-THOR-aks): Abnormal accumulation of air in the space between the pleura.

**Polycythemia** (pol-e-si-THE-me-ah): Increase in red blood cells. One form of polycythemia is polycythemia vera, in which the bone marrow produces an excess of erythrocytes and hemoglobin level is elevated.

**Polydipsia** (pol-e-DIP-se-ah): Excessive thirst.

**Polyneuropathy** (pol-e-nu-ROP-ah-the): Disease of many nerves.

**Polyp** (POL-ip): A growth or mass (benign) protruding from a mucous membrane.

**Polyuria** (pol-e-UR-e-ah): Excessive urination.

**Pons** (ponz): Part of the brain containing nerve pathways connecting upper and lower areas.

- Posterior** (pos-TEER-e-or): Located in the back portion of a structure or of the body.
- Posteroanterior** (pos-ter-o-an-TEER-e-or): Pertaining to direction from back to front.
- Postmortem** (post-MOR-tem): After death.
- Postpartum** (post-PAR-tum): After birth.
- Precancerous** (pre-KAN-ser-us): Pertaining to a condition that may come before a cancer; a condition that tends to become malignant.
- Prenatal** (pre-NA-tal): Pertaining to before birth.
- Proctologist** (prok-TOL-o-jist): Physician who specializes in the study of the anus and rectum.
- Proctoscopy** (prok-TOS-ko-pe): Inspection of the anus and rectum with a proctoscope (ENDOSCOPE). Proctoscopy is often performed before rectal surgery.
- Proctosigmoidoscopy** (prok-to-sig-moyd-OS-ko-pe): Visual examination of the anus, rectum, and sigmoid colon with an endoscope.
- Progesterone** (pro-JES-teh-rone): Hormone secreted by the ovaries to prepare to maintain the uterine lining during pregnancy.
- Prognosis** (prog-NO-sis): Prediction that forecasts the outcome of treatment. Prognosis literally means before (PRO-) knowledge (-GNOSIS).
- Prolapse** (pro-LAPS): Falling down or drooping of a part of the body. Prolapse literally means sliding (-LAPSE) forward (PRO-).
- Prostate gland** (PROS-tayt gland): Male gland that surrounds the base of the urinary bladder. It produces fluid (semen) that leaves the body with sperm cells.
- Prostatectomy** (pros-tah-TEK-to-me): Removal of the prostate gland.
- Prostatic** (pros-TAH-tik): Pertaining to the prostate gland.
- Prostatic carcinoma** (pros-TAH-tik kar-si-NO-mah): Malignant tumor arising from the PROSTATE GLAND. Also called *prostate cancer*.
- Prostatic hyperplasia** (pros-TAH-tik hi-per-PLA-zhah): Abnormal increase in growth (benign) of the prostate gland.
- Prosthesis** (pros-THE-sis): Artificial substitute for a missing part of the body. Prosthesis literally means to place (-THESIS) before (PROS-).
- Prosthodontist** (pros-tho-DON-tist): Dentist specializing in artificial appliances to replace missing teeth.
- Proteinuria** (pro-teen-U-re-ah): Abnormal condition of protein in the urine (albuminuria).
- Psychiatrist** (si-KI-ah-trist): Specialist in the treatment of the mind and mental disorders.
- Psychiatry** (si-KI-ah-tre): Treatment (IATR/O-) of disorders of the mind (PSYCH/O).
- Psychology** (si-KOL-o-je): Study of the mind, especially in relation to human behavior.
- Psychosis** (si-KO-sis): Abnormal condition of the mind; a serious mental disorder that involves loss of normal perception of reality (*plural*: psychoses [si-KO-seez]).
- Pulmonary** (PUL-mo-nair-e): Pertaining to the lungs.
- Pulmonary artery** (PUL-mo-nair-e AR-ter-e): Artery carrying blood from the right ventricle to the lungs.
- Pulmonary circulation** (PUL-mo-nair-e ser-ku-LA-shun): Passage of blood from the heart to the lungs and back to the heart.
- Pulmonary edema** (PUL-mo-nair-e eh-DE-mah): Abnormal collection of fluid in the lung (within the air sacs of the lung). Fluid backs up into lung tissue commonly from congestive heart failure as the heart weakens and is unable to pump blood effectively.
- Pulmonary embolism** (PUL-mo-nair-e EM-bo-lizm): Blockage of blood vessels in the lung by foreign matter (clot, tumor, fat, or air). The EMBOLUS frequently arises from the deep veins of the leg.
- Pulmonary specialist** (PUL-mo-nair-e SPESH-ah-list): Physician trained to treat lung disorders.
- Pupil** (PU-pil): Black center of the eye through which light enters.

**Pyelitis** (pi-eh-LI-tis): Inflammation of the renal pelvis (central section of the kidney).

**Pyelogram** (PI-eh-lo-gram): X-ray record of the renal pelvis after injection of contrast.

## Q

**Quadriplegia** (kwad-rih-PLÉ-jah): Paralysis of all four extremities and usually the trunk of the body caused by injury to the spinal cord in the cervical region of the spine.

## R

**Radiation oncologist** (ra-de-A-shun ong-KOL-o-jist): Physician trained in the treatment of disease (cancer) with high-energy x-rays or particles.

**Radiation therapy** (ra-de-A-shun THER-a-pe): Treatment of disease (cancer) with high-energy x-rays or particles (photons and protons). Also called **RADIOTHERAPY**.

**Radioisotope** (ra-de-o-I-so-tope): See **RADIONUCLIDE**.

**Radiologist** (ra-de-OL-o-jist): Physician trained in the use of x-rays (such as computed tomography and also including ultrasound) to diagnose illness.

**Radiology** (ra-de-OL-o-je): Science of using x-rays in the diagnosis of disease.

**Radionuclide** (ra-de-o-NOO-klid): A chemical substance that emits radioactivity; radioisotope. Radionuclides are used in nuclear medicine to image parts of the body.

**Radiotherapist** (ra-de-o-THER-ah-pist): Physician trained to treat disease (cancer) with high-energy x-rays or particles. See **RADIATION ONCOLOGIST**.

**Radiotherapy** (ra-de-o-THER-ah-pe): Treatment of disease (cancer) with high-energy x-rays or particles such as photons and protons. Also called **RADIATION THERAPY**.

**Radius** (RA-de-us): One of two lower arm bones. The radius is located on the thumb side of the hand.

**Rectal resection** (REK-tal re-SEK-shun): Excision (resection) of the **RECTUM**.

**Rectocele** (REK-to-seel): Hernia (protrusion) of the rectum into the vagina.

**Rectum** (REK-tum): End of the colon. The rectum delivers wastes (feces) to the anus for elimination.

**Relapse** (RE-laps): Return of disease after its apparent termination.

**Remission** (re-MISH-un): Lessening or absence of signs and symptoms of a disease.

**Renal** (RE-nal): Pertaining to the kidney.

**Renal calculus** (RE-nal KAL-ku-lus): Kidney stone.

**Renal failure** (RE-nal FAIL-ur): Condition in which the kidneys no longer function.

**Renal pelvis** (RE-nal PEL-vis): Central section of the kidney, where urine collects.

**Renal transplantation** (RE-nal tranz-plan-TA-shun): A donor kidney is transferred to a recipient whose kidneys have failed.

**Reproductive** (re-pro-DUK-tiv): Pertaining to the process by which living things produce offspring.

**Research** (RE-surch): Laboratory investigation of a medical problem.

**Resection** (re-SEK-shun): Removal (excision) of an organ or a structure.

**Residency training** (RES-i-den-se TRAY-ning): Period of hospital work involving the care of patients after the completion of four years of medical school.

**Respiratory system** (RES-pir-ah-tor-e SIS-tem): Organs that control breathing, allowing air to enter and leave the body.

**Retina** (RET-ih-nah): Layer of sensitive cells at the back of the eye. Light is focused on the retina and then is transmitted to the optic nerve, which leads to the brain.

**Retinopathy** (reh-tih-NOP-ah-the): Disease of the **RETINA**.

**Retrogastric** (reh-tro-GAS-trik): Pertaining to behind the stomach.

**Retroperitoneal** (reh-tro-peh-rih-to-NE-al): Pertaining to behind the **PERITONEUM**.

- Rhabdomyosarcoma** (rab-do-mi-o-sar-KO-mah): Malignant tumor of muscle cells (skeletal, voluntary muscle) that occurs most frequently in the head and neck, extremities, body wall, and area behind the abdomen.
- Rheumatoid arthritis** (ROO-mah-toyd arth-RI-tis): Chronic inflammatory disease of the joints and connective tissue that leads to deformed joints.
- Rheumatologist** (roo-mah-TOL-o-jist): Specialist in the treatment of diseases of connective tissues, especially the joints. RHEUMAT/O- comes from the Greek *rheuma*, meaning “that which flows, as a stream or a river.” Inflammatory disorders of joints are often marked by a collection of fluid in joint spaces.
- Rheumatology** (roo-mah-TOL-o-je): Branch of medicine dealing with inflammation, degeneration, or chemical changes in connective tissues, such as joints and muscles. Pain, stiffness, or limitation of motion are often characteristics of rheumatologic disorders.
- Rhinitis** (ri-NI-tis): Inflammation of the nose.
- Rhinoplasty** (RI-no-plas-te): Surgical repair of the nose.
- Rhinorrhea** (ri-no-RE-ah): Discharge from the nose.
- Rhinotomy** (ri-NOT-o-me): Incision of the nose.
- Rib** (rib): One of twelve paired bones surrounding the chest. Seven ribs (true ribs) attach directly to the breastbone, three (false ribs) attach to the seventh rib, and two (floating ribs) are not attached at all.

## S

- Sacral** (SA-kral): Pertaining to the SACRUM.
- Sacral region** (SA-kral RE-jun): Five fused bones in the lower back, below the lumbar bones and wedged between two parts of the hip (ilium).
- Sacrum** (SA-krum): Triangular bone in the lower back, below the lumbar bones and formed by five fused bones.
- Sagittal plane** (SAJ-ih-tal playn): Imaginary plane that divides an organ or the body into right and left portions. The *mid-sagittal* plane divides a structure equally into right and left halves.
- Sagittal section** (SAJ-ih-tal SEK-shun): Cut (section) through the body, dividing it into a right and a left portion.
- Salpingectomy** (sal-pin-JEK-to-me): Removal of a fallopian (uterine) tube.
- Salpingitis** (sal-pin-JI-tis): Inflammation of a fallopian (uterine) tube.
- Sarcoidosis** (sahr-koy-DO-sis): Chronic, inflammatory disorder of cells in connective tissue, spleen, liver, bone marrow, lungs, and lymph nodes. Small collections of cells (granulomas) form in affected organs and tissues. The cause is unknown but may involve malfunction of the immune system.
- Sarcoma** (sar-KO-mah): Cancerous (malignant) tumor of connective tissue, such as bone, muscle, fat, or cartilage. The root SARC means flesh.
- Scapula** (SKAP-u-lah): Shoulder bone.
- Sclera** (SKLE-rah): White, outer coat of the eyeball.
- Scotoma** (sko-TO-mah): Defect in vision in a defined area (blind spot).
- Scrotal** (SKRO-tal): Pertaining to the scrotum.
- Scrotum** (SKRO-tum): Sac on the outside of the body that contains the testes.
- Sebaceous gland** (seh-BA-shus gland): Oil-producing (sebum-producing) gland in the skin.
- Section** (SEK-shun): Act of cutting; a segment or subdivision of an organ.
- Seizure** (SE-zhur): Convulsion (involuntary contraction of muscles) or attack of epilepsy. A seizure can also indicate a sudden attack or recurrence of a disease.

- Sella turcica** (SEL-ah TUR-sih-kah): Cup-like depression at the base of the skull that holds the pituitary gland.
- Semen** (SE-men): Fluid composed of sperm cells and secretions from the prostate gland and other male exocrine glands.
- Seminoma** (sem-ih-NO-mah): Malignant tumor of the testis.
- Sense organs** (sens OR-ganz): Parts of the body that receive messages from the environment and relay them to the brain so that we see, hear, and feel sensations. Examples of sense organs are the eye, the ear, and the skin.
- Septic** (SEP-tik): Pertaining to infection.
- Septicemia** (sep-tih-SE-me-ah): Infection in the blood. Septicemia is commonly called blood poisoning and is associated with the presence of bacteria or their toxins in the blood.
- Sexually transmitted infection** (SEK-shoo-ah-le trans-MIT-ed in-FEK-shun): Contagious disease acquired through sexual intercourse or genital contact.
- Shock** (shok): Group of symptoms (pale skin, rapid pulse, shallow breathing) that indicate poor oxygen supply to tissue and insufficient return of blood to the heart.
- Sigmoid colon** (SIG-moyd KO-len): S-shaped lower portion of the colon.
- Sigmoidoscopy** (sig-moyd-OS-ko-pe): Visual examination of the sigmoid colon with an endoscope inserted through the anus and rectum.
- Sinus** (SI-nus): Cavity or space, such as in a bone. Also refers to the sinoatrial node or pacemaker of the heart.
- Skin** (skin): Outer covering that protects the body.
- Skull** (skul): Bone that surrounds the brain and other organs in the head.
- Sleep apnea** (SLEEP AP-nee-ah): See [APNEA](#).
- Small intestine** (smal in-TES-tin): Organ that receives food from the stomach. The small intestine is divided into three sections: duodenum, jejunum, and ileum.
- Sonogram** (SON-o-gram): Record of sound waves after they bounce off organs in the body; an [ULTRASOUND](#) or echogram.
- Spasm** (SPAZ-um): Involuntary, sudden muscle contraction.
- Spermatozoon** (sper-mah-to-ZO-on): Sperm cell (*plural*: spermatozoa [sper-mah-to-ZO-ah]).
- Spinal** (SPI-nal): Pertaining to the spine (backbone).
- Spinal cavity** (SPI-nal KAV-ih-te): Space in the back that contains the spinal cord and is surrounded by the backbones.
- Spinal column** (SPI-nal KOL-um): Backbones; vertebrae.
- Spinal cord** (SPI-nal kord): Bundle of nerves that extends from the brain down the back. Spinal nerves carry electrical messages to and from the spinal cord.
- Spinal nerves** (SPI-nal nervz): Nerves that transmit messages to and from the spinal cord.
- Spinal tap** (SPI-nal TAP): See [LUMBAR PUNCTURE](#).
- Spirometer** (spi-ROM-eh-ter): Instrument for testing lung function by measuring the volume of inspired and expired air.
- Spleen** (spleen): Organ in the upper left part (quadrant) of the abdomen that produces white blood cells ([LYMPHOCYTES](#)) and disposes of old, dying red blood cells. The spleen, as part of the immune system, helps fight foreign organisms.
- Splenectomy** (splen-EK-to-me): Removal of the spleen.
- Splenomegaly** (splen-o-MEG-ah-le): Enlargement of the spleen.
- Spondylitis** (spon-dih-LI-tis): Chronic, serious inflammatory disorder of backbones involving erosion and collapse of vertebrae. See [ANKYLOSING SPONDYLITIS](#).
- Spondylosis** (spon-dih-LO-sis): Abnormal condition of a vertebra or vertebrae.
- Sputum** (SPU-tum): Material expelled from the lungs and expelled through the mouth.

- Staging of tumors** (STA-ging of TOO-morz): A system that describes the severity of a patient's cancer based on the extent of the original primary tumor and whether it has spread in the body.
- Stent** (stent): Tube inserted into an artery, blood vessel, or duct to keep it open.
- Sternum** (STER-num): Breastbone.
- Stereotactic radiosurgery** (steh-re-o-TAC-tic rad-e-o-SUR-je-re): This is a non-surgical type of radiation therapy used to treat abnormalities and small tumors of the brain. Also called Cyberknife®, this treatment can deliver precisely targeted radiation in fewer high-dose treatments than traditional therapy.
- Stomach** (STUM-ak): Organ that receives food from the esophagus and sends it to the small intestine. Enzymes in the stomach break down food particles during digestion.
- Stomatitis** (sto-mah-TI-tis): Inflammation of the mouth.
- Stool culture** (stool KUL-tur): Feces (stools) are placed in a growth medium (culture medium), which is later examined microscopically for evidence of microorganisms (such as bacteria).
- Stool guaiac** (stool GWI-ak) [test]: Examination of a small sample of stool for hidden traces of blood; HEMOCULT TEST.
- Stroke** (strok): Condition resulting from trauma to or blockage of blood vessels within the brain; less blood arrives to nerve cells in the brain.
- Stye** (sti): Infection of a gland near the edge the eyelid, often caused by bacteria (staphylococci). Also spelled *sty*.
- Subcostal** (sub-KOS-tal): Pertaining to below the ribs.
- Subcutaneous** (sub-ku-TA-ne-us): Pertaining to under the skin.
- Subcutaneous tissue** (sub-ku-TA-ne-us TIS-u): Lower layer of the skin composed of fatty tissue.
- Subdural hematoma** (sub-DUR-al he-mah-TO-mah): Collection of blood under the dura mater (outermost layer of the membranes surrounding the brain).
- Subgastric** (sub-GAS-trik): Pertaining to below the stomach.
- Subhepatic** (sub-heh-PAT-ik): Pertaining to under the liver.
- Subscapular** (sub-SKAP-u-lar): Pertaining to under the shoulder bone.
- Subtotal** (sub-TO-tal): Less than total; often just under the total amount.
- Subungual** (sub-UN-gwal): Pertaining to under (SUB-) a nail (UNGU/O).
- Suprarenal glands** (soo-prah-RE-nal glanz): Two endocrine glands, each located above a kidney. See [ADRENAL GLANDS](#).
- Surgery** (SUR-jer-e): Branch of medicine that treats disease by manual (hand) or operative methods.
- Sweat gland** (swet gland): Organ in the skin that produces a watery substance containing salts.
- Syncope** (SING-koh-pe): Fainting; sudden loss of consciousness.
- Syndrome** (SYN-droh-m): Set of symptoms and signs that occur together to indicate a disease condition.
- Syphilis** (SIF-ih-lis): Sexually transmitted infection caused by spirochete (type of bacterium).
- System** (SIS-tem): Group of organs working together to do a job in the body. For example, the digestive system includes the mouth, throat, stomach, and intestines, all of which help to bring food into the body, break it down, and deliver it to the bloodstream.
- Systemic circulation** (sis-TEM-ik ser-ku-LA-shun): Passage of blood from the heart to the tissues of the body and back to the heart.
- Systemic lupus erythematosus** (sis-TEM-ik LOO-pus er-ih-the-mah-TO-sus): Chronic inflammatory disease affecting many systems of the body (joints, skin, kidneys, and nerves). A red (erythematous) rash over the nose and cheeks is characteristic.

## T

**Tachycardia** (tak-eh-KAR-de-ah): Condition of a fast, rapid heartbeat.

**Tachypnea** (tak-ip-NE-ah): Condition of rapid breathing.

**Tendinitis** (ten-dih-NI-tis): Inflammation of a tendon.

**Tendon** (TEN-don): Connective tissue that joins muscles to bones.

**Tenorrhaphy** (ten-OR-ah-fe): Suture of a tendon.

**Testicle** (TES-tih-kl): See **TESTIS**.

**Testicular carcinoma** (tes-TIK-u-lar kar-sih-NO-mah): Malignant tumor originating in a testis. An example is a **SEMINOMA**.

**Testis** (TES-tis): One of two paired male organs in the scrotal sac. The testes (*plural*) produce sperm cells and male hormone (testosterone). Also called a testicle.

**Testosterone** (tes-TOS-teh-rone): A hormone that produces male secondary sex characteristics; an **ANDROGEN**.

**Thoracentesis** (tho-rah-sen-TE-sis): Surgical puncture of the chest to remove fluid; thoracocentesis.

**Thoracic** (tho-RAS-ik): Pertaining to the chest.

**Thoracic cavity** (tho-RAS-ik KAV-ih-te): Space above the abdomen that contains the heart, lungs, and other organs; the chest cavity.

**Thoracic region** (tho-RAS-ik RE-jun): Twelve backbones attached to the ribs and located in the region of the chest, between the neck and the waist.

**Thoracic surgeon** (tho-RAS-ik SUR-jun): Physician who operates on organs in the chest.

**Thoracic vertebra** (tho-RAS-ik VER-teh-brah): A backbone in the region of the chest.

**Thoracotomy** (tho-rah-KOT-o-me): Incision of the chest.

**Throat** (throt): See **PHARYNX**.

**Thrombocyte** (THROM-bo-site): Clotting cell; a **PLATELET**.

**Thrombolytic therapy** (throm-bo-LIT-ik THER-ah-pe): Treatment with drugs such as streptokinase and tPA (tissue plasminogen activator) to dissolve clots that may cause a heart attack.

**Thrombophlebitis** (throm-bo-fleh-BI-tis): Inflammation of a vein accompanied by formation of a clot.

**Thrombosis** (throm-BO-sis): Abnormal condition of clot formation.

**Thrombus** (THROM-bus): Blood clot.

**Thymoma** (thi-MO-mah): Tumor (malignant) of the thymus gland.

**Thymus gland** (THI-mus gland): Lymphoid organ of the immune system. It is located in the chest between the lungs. It stimulates the production of **LYMPHOCYTES** (white blood cells).

**Thyroadenitis** (thi-ro-ah-deh-NI-tis): Inflammation of the thyroid gland.

**Thyroidectomy** (thi-roy-DEK-to-me): Removal of the thyroid gland.

**Thyroid gland** (THI-royd gland): Endocrine gland in the neck that produces hormones that act on cells all over the body. The hormones increase the activity of cells by stimulating metabolism and the release of energy.

**Thyroid-stimulating hormone** (THI-royd STIM-u-la-ting HOR-mone): Hormone secreted by the pituitary gland to stimulate the thyroid gland to produce its hormones, such as thyroxine. Also called **TSH**.

**Thyroxine** (thi-ROK-sin): Hormone secreted by the thyroid gland. Also known as **T<sub>4</sub>**.

**Tibia** (TIB-e-ah): Larger of the two lower leg bones; the shin bone.

**Tinnitus** (TIN-ih-tus): Noise in the ears, such as ringing, roaring, or buzzing.

**Tissue** (TISH-u): Groups of similar cells that work together to do a job in the body. Examples are muscle tissue, nerve tissue, and epithelial (skin) tissue.

**Tissue capillaries** (TISH-u KAP-ih-lar-eez): Tiny blood vessels that lie near cells and through whose walls gases, food, and waste materials pass.

- Tomography** (to-MOG-rah-fe): Series of x-ray images that show an organ in depth by producing images of single tissue planes.
- Tomosynthesis** (to-mo-SIN-theh-sis): New mammographic technique that shows clearer and more detailed images.
- Tonsillectomy** (ton-sih-LEK-to-me): Removal (excision) of a tonsil or TONSILS.
- Tonsillitis** (ton-sih-LI-tis): Inflammation of the TONSILS.
- Tonsils** (TON-silz): Lymphatic tissue in the back of the mouth near the throat.
- Trachea** (TRA-ke-ah): Tube that carries air from the throat to the BRONCHIAL TUBES; the windpipe.
- Tracheitis** (tra-ke-I-tis): Inflammation of the trachea.
- Tracheostomy** (tra-ke-OS-to-me): Opening of the trachea to the outside of the body.
- Tracheotomy** (tra-ke-OT-o-me): Incision of the trachea.
- Transabdominal** (tranz-ab-DOM-ih-nal): Pertaining to across the abdomen.
- Transdermal** (tranz-DER-mal): Pertaining to through the skin.
- Transgastric** (tranz-GAS-trik): Pertaining to across (through) the stomach.
- Transhepatic** (tranz-he-PAH-tik): Pertaining to across or through the liver.
- Transurethral** (tranz-u-RE-thral): Pertaining to across (through) the urethra. TURP is transurethral resection of the prostate gland by surgery through the urethra.
- Transvaginal ultrasound** (tranz-VAH-jin-al UL-trah-sownd): A sound probe is placed in the vagina and ultrasound images are made of the pelvic organs (uterus and ovaries).
- Transverse plane** (tranz-VERS playn): Imaginary plane that divides an organ or the body into an upper and a lower portion; a cross-sectional view.
- Trichotillomania** (trik-o-til-o-MAN-e-ah): Obsessive-compulsive disorder marked by the urge to pull out (TILL/O) one's hair.
- Tricuspid valve** (tri-KUS-pid valv): Fold of tissue between the upper and lower chambers on the right side of the heart. It has three cusps or points and prevents backflow of blood into the right ATRIUM when the heart is pumping blood.
- Triglyceride** (tri-GLIS-eh-ride): Fat consisting of three molecules of fatty acid and glycerol. It makes up most animal and vegetable fats and is the major lipid (fat) in blood.
- Tubal ligation** (TOO-bul li-GA-shun): Fallopian tubes are tied off (ligated) with sutures.
- Tuberculosis** (too-ber-ku-LO-sis): Infectious, inflammatory disease that commonly affects the lungs, although it can occur in any part of the body. It is caused by the tubercle bacillus (type of bacterium).
- Tympanic membrane** (tim-PAN-ik MEM-brayn): See [EARDRUM](#).
- Tympanoplasty** (tim-pan-o-PLAS-te): Surgical repair of the eardrum.

## U

- Ulcer** (UL-ser): Sore or defect in the surface of an organ. Ulcers (hollowed-out spaces) are produced by destruction of tissue.
- Ulcerative colitis** (UL-seh-rah-tiv ko-LI-tis): Recurrent inflammatory disorder marked by ulcers in the large bowel. Along with Crohn disease, ulcerative colitis is an INFLAMMATORY BOWEL DISEASE.
- Ulna** (UL-nah): One of two lower arm bones. The ulna is located on the little finger side of the hand.
- Ultrasonography** (ul-trah-so-NOG-rah-fe): Recording of internal sound waves as they impact body structures.
- Ultrasound** (UL-tra-sownd): Sound waves with greater frequency than can be heard by the human ear. This energy is used to detect abnormalities by beaming the waves into the body and recording echoes that reflect off tissues.
- Unilateral** (u-nih-LAT-er-al): Pertaining to one side.

- Upper gastrointestinal (GI) series** (UP-er gas-tro-in-TES-tin-al SEER-eez): Barium is swallowed, and x-ray images are taken of the esophagus, stomach, and small intestine.
- Urea** (u-RE-ah): Chief nitrogen-containing waste that the kidney removes from the blood and eliminates from the body in urine.
- Uremia** (u-RE-me-ah): Abnormal condition of excessive amounts of urea (nitrogenous waste) in the bloodstream.
- Ureter** (YOOR-eh-ter *or* u-RE-ter): One of two tubes that lead from the kidney to the urinary bladder.
- Ureterectomy** (u-re-ter-EK-to-me): Removal (excision) of a ureter.
- Urethra** (u-RE-thrah): Tube that carries urine from the urinary bladder to the outside of the body. In males, the urethra, which is within the penis, also carries sperm from the VAS DEFERENS to the outside of the body when sperm are discharged (ejaculation).
- Urethral stricture** (u-RE-thral STRIK-shur): Narrowing of the urethra.
- Urethritis** (u-re-THRI-tis): Inflammation of the urethra.
- Uric acid** (U-rik acid): Nitrogen-containing waste material from breakdown of nucleic acids (DNA and RNA). It is normally filtered from the blood by the kidneys and passes out of the body in urine. High levels of uric acid in the blood are an indication of GOUT, a type of arthritis.
- Urinalysis** (u-rih-NAL-ih-sis): Examination of urine to determine its contents.
- Urinary bladder** (UR-in-air-e BLA-der): Muscular sac that holds urine and then releases it to leave the body through the urethra.
- Urinary catheterization** (UR-in-air-e kath-eh-ter-ih-ZA-shun): Catheter (tube) is passed through the urethra into the urinary bladder for short- or long-term drainage of urine.
- Urinary retention** (UR-in-air-e re-TEN-shun): Condition in which urine is unable to leave the urinary bladder.
- Urinary system** (UR-in-air-e SIS-tem): Organs that produce and send urine out of the body. These organs are the kidneys, ureters, bladder, and urethra.
- Urinary tract** (UR-in-air-e trakt): Tubes and organs that carry urine from the kidney to the outside of the body.
- Urine** (UR-in): Fluid that is produced by the kidneys, passed through the ureters, stored in the bladder, and released from the body through the urethra.
- Urologist** (u-ROL-o-jist): Specialist in operating on the urinary tract in males and females and on the reproductive tract in males.
- Urology** (u-ROL-o-je): Study of the urinary tract (surgical specialty).
- Uterine** (U-ter-in): Pertaining to the uterus.
- Uterine artery embolization** (U-ter-in AR-ter-e em-bo-lih-ZA-shun): Blockage of blood flow in the uterine artery to slow the growth of uterine fibroids.
- Uterine tubes** (U-ter-in toobz): See [FALLOPIAN TUBES](#).
- Uterus** (U-ter-us): Muscular organ in a female that holds and provides nourishment for the developing fetus; the WOMB.

## V

- Vagina** (vah-JI-nah): Muscular passageway from the uterus to the outside of the body.
- Vaginitis** (vah-jih-NI-tis): Inflammation of the vagina.
- Valve** (valv): Natural structure or artificial device that prevents backward flow of fluid (such as blood).
- Varicocele** (VAR-ih-ko-seel): Abnormal enlargement of veins in the SCROTUM. This condition produces a swelling that feels like a “bag of worms.”
- Varix** (VAH-riks): An enlarged, swollen, tortuous vein (*plural*: varices [VAH-rih-seez]).
- Vas deferens** (vas DEF-er-enz): One of two tubes that carry sperm from the testes to the urethra for ejaculation.

- Vascular** (VAS-ku-lar): Pertaining to blood vessels.
- Vasculitis** (vas-ku-LI-tis): Inflammation of blood vessels.
- Vasectomy** (vas-EK-to-me): Removal of a portion of the vas deferens so that sperm cells are prevented from becoming part of SEMEN.
- Vasoconstrictor** (vas-o-kon-STRIK-tor): Drug that narrows blood vessels, especially small arteries.
- Vasodilator** (vas-o-DI-la-tor): Agent that widens blood vessels.
- Vein** (van): Blood vessel that carries blood back to the heart from tissues of the body.
- Ventricle** (VEN-trih-kl): One of the two lower chambers of the heart. The right ventricle receives blood from the right atrium (upper chamber) and sends it to the lungs. The left ventricle receives blood from the left atrium and sends it to the body through the aorta.
- Ventricular arrhythmia** (ven-TRIK-u-lar ah-RITH-me-ah): Abnormal heart rhythm originating in the lower chambers of the heart.
- Venule** (VEN-ul): Small vein.
- Venulitis** (ven-u-LI-tis): Inflammation of a small vein.
- Vertebra** (VER-teh-brah): Backbone.
- Vertebrae** (VER-teh-bray): Backbones.
- Vertebral** (VER-teh-bral): Pertaining to a backbone.
- Vertebroplasty** (ver-teh-bro-PLAS-te): Surgical repair of backbone fractures by injecting cement into vertebrae to strengthen them and relieve pain.
- Vesical** (VES-ih-kal): Pertaining to the urinary bladder (VESIC/O).
- Vitreous humor** (VIT-re-us HU-mor): Transparent clear gel that fills the space between the lens and the retina of the eye.
- Virtual colonoscopy** (VER-choo-al ko-lon-OS-ko-pe): See [CT COLONOGRAPHY](#).
- Virus** (VI-rus): Small infectious agent that can reproduce itself only when it is inside another living cell (host).
- Visceral** (VIS-er-al): Pertaining to internal organs.

**W**

- Womb** (woom): See [UTERUS](#).
- Wound** (woond): Any physical injury involving a break in the skin (chest wound, gunshot wound, puncture wound, and so on).

<b>Section I: Medical Terminology → English .....</b>	<b>386</b>
<b>Section II: English → Medical Terminology .....</b>	<b>394</b>

**Section I** of this glossary is a list of **medical terminology word parts** and their **English meanings**. **Section II** is the reverse of that list, giving **English meanings** and their corresponding **medical terminology word parts**. Section II begins on page 394.

## SECTION I: MEDICAL TERMINOLOGY → ENGLISH

Word Part	Meaning
<b>a-, an-</b>	no, not
<b>ab-</b>	away from
<b>abdomin/o</b>	abdomen; <i>see also</i> lapar/o
<b>-ac</b>	pertaining to
<b>ad-</b>	toward
<b>aden/o</b>	gland
<b>adenoid/o</b>	adenoids
<b>adren/o</b>	adrenal gland
<b>-al</b>	pertaining to
<b>-algia</b>	condition of pain; <i>see also</i> -dynia
<b>alveol/o</b>	alveolus (air sac within the lung)
<b>amni/o</b>	amnion (sac that surrounds the embryo)
<b>-an</b>	pertaining to
<b>ana-</b>	up, apart
<b>an/o</b>	anus
<b>angi/o</b>	vessel (blood)
<b>ante-</b>	before, forward
<b>anter/o</b>	front
<b>anti-</b>	against
<b>aort/o</b>	aorta
<b>append/o, appendic/o</b>	appendix
<b>-ar</b>	pertaining to
<b>arteri/o</b>	artery
<b>arteriol/o</b>	small artery
<b>arthr/o</b>	joint
<b>-ary</b>	pertaining to
<b>ather/o</b>	fatty plaque
<b>-ation</b>	process, condition
<b>aur/o</b>	ear; <i>see also</i> ot/o
<b>aut-</b>	self
<b>axill/o</b>	armpit
<b>balan/o</b>	penis
<b>bari/o</b>	weight
<b>bi-</b>	two
<b>bi/o</b>	life
<b>blephar/o</b>	eyelid
<b>brady-</b>	slow
<b>bronch/o</b>	bronchial tube
<b>bronchiol/o</b>	small bronchial tube

<b>calcane/o</b>	calcaneus (heel bone)
<b>capillar/o</b>	capillary
<b>carcin/o</b>	cancer, cancerous
<b>cardi/o</b>	heart
<b>carp/o</b>	wrist bones (carpals)
<b>-cele</b>	hernia
<b>-centesis</b>	surgical puncture to remove fluid
<b>cephal/o</b>	head
<b>cerebell/o</b>	cerebellum (posterior part of the brain)
<b>cerebr/o</b>	cerebrum (largest part of the brain)
<b>cervic/o</b>	neck
<b>chem/o</b>	drug, chemical
<b>cholecyst/o</b>	gallbladder
<b>choledoch/o</b>	common bile duct
<b>chondr/o</b>	cartilage
<b>chron/o</b>	time
<b>-cision</b>	process of cutting
<b>cis/o</b>	to cut
<b>clavicul/o</b>	clavicle (collarbone)
<b>-coccus</b>	bacterium (berry-shaped); <i>plural</i> : -cocci
<b>coccyg/o</b>	tailbone
<b>col/o</b>	colon (large intestine)
<b>colon/o</b>	colon
<b>colp/o</b>	vagina
<b>comi/o</b>	to care for
<b>con-</b>	with, together
<b>coni/o</b>	dust
<b>-coniosis</b>	abnormal condition of dust
<b>contra-</b>	against
<b>coron/o</b>	heart
<b>cost/o</b>	rib
<b>crani/o</b>	skull
<b>crin/o</b>	secrete
<b>-crine</b>	secretion
<b>-crit</b>	separation
<b>cry/o</b>	cold
<b>cutane/o</b>	skin
<b>cyan/o</b>	blue
<b>cyst/o</b>	urinary bladder
<b>-cyte</b>	cell
<b>cyt/o</b>	cell
<b>dactyl/o</b>	fingers or toes
<b>de-</b>	away from, down
<b>dent/i</b>	tooth
<b>dermat/o, derm/o</b>	skin
<b>dia-</b>	complete, through
<b>-dipsia</b>	thirst
<b>duoden/o</b>	duodenum
<b>dur/o</b>	dura mater (outermost meningeal layer)
<b>-dynia</b>	pain
<b>dys-</b>	abnormal, bad, difficult, painful

<b>-eal</b>	pertaining to
<b>ec-</b>	out, outside
<b>-ectasia, -ectasis</b>	dilation, stretching, widening
<b>ecto-</b>	out, outside
<b>-ectomy</b>	excision (resection, removal); process of cutting out
<b>electr/o</b>	electricity
<b>-emesis</b>	vomiting
<b>-emia</b>	blood condition
<b>en-</b>	in, inner, within
<b>encephal/o</b>	brain
<b>endo-</b>	within, in, inner
<b>endocrin/o</b>	endocrine glands
<b>endometr/o,</b> <b>endometri/o</b>	endometrium (inner lining of the uterus)
<b>enter/o</b>	intestines (usually small intestine)
<b>epi-</b>	above, upon
<b>epiglott/o</b>	epiglottis
<b>epitheli/o</b>	skin (surface tissue)
<b>erythr/o</b>	red
<b>esophag/o</b>	esophagus
<b>esthesi/o</b>	sensation
<b>eu-</b>	good (normal)
<b>ex-, exo-, extra-</b>	out, outside
<b>femor/o</b>	femur, thigh bone
<b>fibr/o</b>	fibrous tissue
<b>fibul/o</b>	fibula (smaller lower leg bone)
<b>gastr/o</b>	stomach
<b>gen/o</b>	to produce
<b>-gen</b>	production, formation
<b>-genesis</b>	producing, forming
<b>-genic</b>	pertaining to producing, produced by
<b>ger/o</b>	old age
<b>-globin</b>	protein
<b>glyc/o</b>	sugar
<b>gnos/o</b>	knowledge
<b>-gram</b>	record
<b>-graph</b>	instrument to record
<b>-graphy</b>	process of recording, to record
<b>gynec/o</b>	woman, female
<b>hemat/o, hem/o</b>	blood
<b>hepat/o</b>	liver
<b>humer/o</b>	humerus (upper arm bone)
<b>hydr/o</b>	water
<b>hyper-</b>	excessive, more than normal, too much, above
<b>hypo-</b>	below, deficient, less than normal, too little
<b>hypophys/o</b>	pituitary gland
<b>hyster/o</b>	uterus
<b>-ia</b>	condition
<b>-ian</b>	practitioner

<b>iatr/o</b>	treatment
<b>-ic, -ical</b>	pertaining to
<b>ile/o</b>	ileum (third part of small intestine)
<b>ili/o</b>	ilium (upper part of hip bone)
<b>in-</b>	in, into
<b>-ine</b>	pertaining to
<b>infra-</b>	below
<b>inguin/o</b>	groin
<b>inter-</b>	between
<b>intra-</b>	within
<b>-ior</b>	pertaining to
<b>isch/o</b>	to hold back
<b>-ism</b>	condition, process
<b>-ist</b>	specialist
<b>-itis</b>	inflammation
<b>jejun/o</b>	jejunum
<b>lapar/o</b>	abdomen
<b>-lapse</b>	slide
<b>laryng/o</b>	larynx (voice box)
<b>later/o</b>	side
<b>ligament/o</b>	ligament
<b>leiomy/o</b>	smooth muscle
<b>leuk/o</b>	white
<b>lip/o</b>	fat
<b>-listhesis</b>	sliding
<b>lith/o</b>	stone
<b>-lith</b>	stone
<b>-logist</b>	specialist in the study of
<b>-logy</b>	process of study, study of
<b>lumb/o</b>	loin, waist region
<b>lymph/o</b>	lymph
<b>lymphaden/o</b>	lymph nodes
<b>lymphangi/o</b>	lymph vessel
<b>lys/o</b>	breakdown, destruction, separation
<b>-lysis</b>	breakdown, destruction, separation
<b>macro-</b>	large
<b>mal-</b>	bad
<b>-malacia</b>	softening
<b>mamm/o</b>	breast
<b>mast/o</b>	breast
<b>mediastin/o</b>	mediastinum
<b>medull/o</b>	medulla oblongata (lower part of the brain)
<b>-megaly</b>	enlargement
<b>men/o</b>	menstruation
<b>mening/o</b>	meninges (membranes covering brain and spinal cord)
<b>meta-</b>	beyond, change
<b>metacarp/o</b>	metacarpals (hand bones)
<b>metatars/o</b>	metatarsals (foot bones)
<b>-meter</b>	measure
<b>metr/o, metri/o</b>	uterus; to measure

<b>-metry</b>	measurement
<b>micro-</b>	small
<b>-mortem</b>	death
<b>-motor</b>	movement
<b>multi-</b>	many
<b>muscul/o</b>	muscle
<b>my/o</b>	muscle
<b>myel/o</b>	bone marrow (with -blast,-cyte, -genous, -oma)
<b>myel/o</b>	spinal cord (with -cele, -gram, -itis)
<b>myos/o</b>	muscle
<b>myring/o</b>	eardrum
<b>nas/o</b>	nose
<b>nat/i</b>	birth
<b>necr/o</b>	death
<b>neo-</b>	new
<b>nephr/o</b>	kidney
<b>neur/o</b>	nerve
<b>norm/o</b>	rule, order
<b>nos/o</b>	disease
<b>nulli-</b>	none
<b>obstetr/o</b>	midwife
<b>ocul/o</b>	eye
<b>odont/o</b>	tooth
<b>-oid</b>	pertaining to, resembling
<b>-oma</b>	tumor, mass, swelling
<b>onc/o</b>	tumor (cancerous)
<b>onycho/o</b>	nail
<b>o/o</b>	egg
<b>oophor/o</b>	ovary
<b>ophthalm/o</b>	eye
<b>-opsy</b>	to view; process of viewing
<b>opt/o, optic/o</b>	eye
<b>or/o</b>	mouth
<b>orch/o</b>	testicle, testis
<b>orchi/o</b>	testicle, testis
<b>orchid/o</b>	testicle, testis
<b>orth/o</b>	straight
<b>-osis</b>	abnormal condition
<b>osm/o</b>	smell
<b>oste/o</b>	bone
<b>ot/o</b>	ear
<b>-ous</b>	pertaining to
<b>ovari/o</b>	ovary
<b>pan-</b>	all
<b>pancreat/o</b>	pancreas
<b>para-</b>	along the side of, beside, near
<b>parathyroid/o</b>	parathyroid gland
<b>-partum</b>	birth
<b>path/o</b>	disease

<b>-pathy</b>	disease condition
<b>ped/o</b>	child
<b>pelv/o</b>	hip bone
<b>-penia</b>	deficiency
<b>per-</b>	through
<b>peri-</b>	surrounding
<b>peritone/o</b>	peritoneum (membrane around abdominal organs)
<b>perone/o</b>	fibula
<b>-pexy</b>	fixation (surgical)
<b>phak/o</b>	lens of the eye
<b>phalang/o</b>	phalanges (finger and toe bones)
<b>pharyng/o</b>	pharynx, throat
<b>-phasia</b>	speech
<b>-philia</b>	attraction to
<b>phleb/o</b>	vein
<b>phren/o</b>	diaphragm
<b>phren/o</b>	mind
<b>physi/o</b>	function
<b>pituitar/o</b>	pituitary gland
<b>plas/o</b>	development, formation, growth
<b>-plasm</b>	development, formation, growth
<b>-plasia</b>	formation, growth
<b>-plasty</b>	surgical repair
<b>-plegia</b>	paralysis
<b>pleur/o</b>	pleura (membranes surrounding the lungs)
<b>-pnea</b>	breathing
<b>pneum/o</b>	air, lung
<b>pneumon/o</b>	lung
<b>-poiesis</b>	formation
<b>poly-</b>	many, much
<b>post-</b>	after, behind
<b>poster/o</b>	back, behind
<b>pre-</b>	before
<b>pro-, pros-</b>	before, forward
<b>prosth/o</b>	artificial replacement
<b>proct/o</b>	anus and rectum
<b>prostat/o</b>	prostate gland
<b>psych/o</b>	mind
<b>-ptosis</b>	prolapse, sagging
<b>-ptysis</b>	spitting
<b>pulmon/o</b>	lung
<b>pyel/o</b>	renal pelvis (central section of the kidney)
<b>radi/o</b>	x-ray; radius (lateral lower arm bone)
<b>re</b>	back
<b>rect/o</b>	rectum
<b>ren/o</b>	kidney
<b>retin/o</b>	retina of the eye
<b>retro-</b>	behind
<b>rhabdomy/o</b>	striated (skeletal) muscle
<b>rheumat/o</b>	flow, fluid
<b>rhin/o</b>	nose

<b>-rrhage</b>	excess flow of blood
<b>-rrhagia</b>	excess flow of blood
<b>-rrhaphy</b>	suture
<b>-rrhea</b>	discharge, flow
<b>sacr/o</b>	sacrum
<b>salping/o</b>	fallopian (uterine) tube; eustachian tube
<b>-salpinx</b>	fallopian (uterine) tube; eustachian tube
<b>sarc/o</b>	flesh
<b>scapul/o</b>	shoulder blade (bone)
<b>-sclerosis</b>	hardening
<b>-scope</b>	instrument to view or visually examine
<b>-scopy</b>	process of visual examination
<b>scrot/o</b>	scrotal sac, scrotum
<b>-section</b>	process of cutting into
<b>sept/o</b>	infection
<b>septic/o</b>	infection
<b>-sis</b>	state of; condition
<b>-somatic</b>	pertaining to the body
<b>son/o</b>	sound
<b>-spasm</b>	constriction
<b>spin/o</b>	backbone, spine, vertebra
<b>splen/o</b>	spleen
<b>spondyl/o</b>	backbone, vertebra
<b>-stasis</b>	control, stop; place, to stand
<b>-stat</b>	stop, control
<b>-stenosis</b>	narrowing
<b>stern/o</b>	sternum (breastbone)
<b>stomat/o</b>	mouth
<b>-stomy</b>	opening
<b>sub-</b>	below, under
<b>supra-</b>	above
<b>-sym-</b>	with, together (use before b, p, and m)
<b>-syn-</b>	with, together
<b>tachy-</b>	fast
<b>tendin/o, ten/o</b>	tendon
<b>-tension</b>	pressure
<b>theli/o, thel/o</b>	nipple
<b>-therapy</b>	treatment
<b>-thesis</b>	put, place
<b>thorac/o</b>	chest
<b>thromb/o</b>	clotting, clot
<b>thym/o</b>	thymus gland
<b>thyr/o, thyroid/o,</b> <b>thyroaden/o</b>	thyroid gland
<b>tibi/o</b>	tibia or shin bone (larger lower leg bone)
<b>-tic</b>	pertaining to
<b>-tomy</b>	process of cutting into, incision
<b>tonsill/o</b>	tonsils
<b>top/o</b>	to put, place
<b>trache/o</b>	trachea, windpipe

<b>trans-</b>	across, through
<b>tri-</b>	three
<b>-troph/o</b>	development, nourishment
<b>-trophy</b>	development, nourishment
<b>tympan/o</b>	eardrum
<b>uln/o</b>	ulna (medial lower arm bone)
<b>ultra-</b>	beyond
<b>-um</b>	structure
<b>ungu/o</b>	nail
<b>uni-</b>	one
<b>ureter/o</b>	ureter
<b>urethr/o</b>	urethra
<b>ur/o</b>	urine, urinary tract
<b>-uria</b>	urine condition
<b>uter/o</b>	uterus
<b>vagin/o</b>	vagina
<b>vas/o</b>	vas deferens, vessel
<b>vascul/o</b>	blood vessel
<b>ven/o</b>	vein
<b>venul/o</b>	venule
<b>vertebr/o</b>	backbone, vertebra
<b>vesic/o</b>	urinary bladder
<b>-y</b>	condition, process

## SECTION II: ENGLISH → MEDICAL TERMINOLOGY

Meaning	Word Part
<b>abdomen</b>	abdomin/o ( <i>use with</i> -al, -centesis) lapar/o ( <i>use with</i> -scope, -scopy, -tomy)
<b>abnormal</b>	dys-
<b>abnormal condition</b>	-osis
<b>abnormal condition of dust</b>	-coniosis
<b>above</b>	epi-, hyper-, supra-
<b>across</b>	trans-
<b>adenoids</b>	adenoid/o
<b>adrenal gland</b>	adren/o
<b>after</b>	post-
<b>against</b>	anti-, contra-
<b>air</b>	pneum/o
<b>air sac</b>	alveol/o
<b>all</b>	pan-
<b>along the side of</b>	para-
<b>alveolus</b>	alveol/o
<b>amnion</b>	amni/o
<b>anus</b>	an/o
<b>anus and rectum</b>	proct/o
<b>aorta</b>	aort/o
<b>apart</b>	ana-
<b>appendix</b>	append/o ( <i>use with</i> -ectomy) appendic/o ( <i>use with</i> -itis)
<b>armpit</b>	axill/o
<b>artery</b>	arteri/o
<b>artificial replacement</b>	prosth/o
<b>attraction to</b>	-philia
<b>away from</b>	ab-, de-
<b>back</b>	poster/o, re-, retro-
<b>backbone</b>	spin/o ( <i>use with</i> -al) spondyl/o ( <i>use with</i> -itis, -listhesis, -osis, -pathy) vertebr/o ( <i>use with</i> -al)
<b>bacterium (berry-shaped)</b>	-coccus ( <i>plural: -cocci</i> )
<b>bad</b>	dys-, mal-
<b>before</b>	ante-, pre-, pro-, pros-
<b>behind</b>	post-, poster/o, re-, retro-
<b>below</b>	hypo-, infra-, sub-
<b>beside</b>	para-
<b>between</b>	inter-
<b>beyond</b>	meta-, ultra-
<b>birth</b>	nat/i, -partum
<b>bladder (urinary)</b>	cyst/o ( <i>use with</i> -ic, -itis, -cele, -gram, -scopy) vesic/o ( <i>use with</i> -al, -stomy, -tomy)
<b>blood</b>	hem/o ( <i>use with</i> -cyte, -dialysis, -globin, -lysis, -philia, -ptysis, -rrhage, -stasis, -stat) hemat/o ( <i>use with</i> -crit, -emesis, -logist, -logy, -oma, -poiesis, -salpinx, -uria)

<b>blood condition</b>	-emia
<b>blood flow, excess</b>	-rrhage, -rrhagia
<b>blood vessel</b>	angi/o ( <i>use with</i> -ectomy, -dysplasia, -genesis, -gram, -graphy, -oma, -plasty, -spasm)
	vas/o ( <i>use with</i> -constriction, -dilation, -dilatation, -motor)
	vascul/o ( <i>use with</i> -ar, -itis)
<b>blue</b>	cyan/o
<b>body</b>	-somatic
<b>bone</b>	oste/o
<b>bone marrow</b>	myel/o
<b>brain</b>	encephal/o
<b>breakdown</b>	-lysis, lys/o
<b>breast</b>	mamm/o ( <i>use with</i> -ary, -gram, -graphy, -plasty)
	mast/o ( <i>use with</i> -algia, -ectomy, -itis)
<b>breastbone</b>	stern/o
<b>breathing</b>	-pnea
<b>bronchial tube</b>	bronch/o
<b>bronchiole</b>	bronchiol/o
<b>calcaneus</b>	calcane/o
<b>cancer</b>	carcin/o
<b>cancerous</b>	carcin/o
<b>capillary</b>	capillar/o
<b>care for (to)</b>	comi/o
<b>carpals</b>	carp/o
<b>cartilage</b>	chondr/o
<b>cell</b>	-cyte, cyt/o
<b>cerebellum</b>	cerebell/o
<b>cerebrum</b>	cerebr/o
<b>change</b>	meta-
<b>chemical</b>	chem/o
<b>chest</b>	thorac/o
<b>child</b>	ped/o
<b>clavicle</b>	clavicul/o
<b>clotting, clot</b>	thromb/o
<b>cold</b>	cry/o
<b>collarbone</b>	clavicul/o
<b>colon</b>	col/o ( <i>use with</i> -ectomy, -itis, -stomy)
	colon/o ( <i>use with</i> -pathy, -scope, -scopy)
<b>common bile duct</b>	choledoch/o
<b>complete</b>	dia-
<b>condition</b>	-ation, -ia, -ism, -osis, -sis, -y
<b>condition of blood</b>	-emia
<b>constriction</b>	-spasm
<b>control</b>	-stasis, -stat
<b>cut</b>	-cision, cis/o, -section, -tomy
<b>death</b>	-mortem, necr/o
<b>deficiency</b>	-penia
<b>deficient</b>	hypo-
<b>destruction</b>	lys/o, -lysis

<b>development</b>	plas/o, -plasm, troph/o, -trophy
<b>dilation</b>	-ectasia, -ectasis
<b>diaphragm</b>	phren/o
<b>difficult</b>	dys-
<b>discharge</b>	-rrhea
<b>disease</b>	nos/o; path/o, -pathy
<b>drug</b>	chem/o
<b>duodenum</b>	duoden/o
<b>dura mater</b>	dur/o
<b>dust</b>	coni/o
<b>dust condition</b>	-coniosis
<b>ear</b>	aur/o, ot/o
<b>eardrum</b>	myring/o ( <i>use with</i> -ectomy, -itis, -tomy) tympan/o ( <i>use with</i> -ic, -metry, -plasty)
<b>egg</b>	o/o
<b>electricity</b>	electr/o
<b>endocrine gland</b>	endocrin/o
<b>endometrium</b>	endometri/o
<b>enlargement</b>	-megaly
<b>epiglottis</b>	epiglott/o
<b>esophagus</b>	esophag/o
<b>eustachian tube</b>	salping/o, -salpinx
<b>excessive</b>	hyper-
<b>excision</b>	-ectomy
<b>eye</b>	ocul/o ( <i>use with</i> -ar, -facial, -motor) ophthalm/o ( <i>use with</i> -ia, -ic, -logist, -logy, -pathy, -plasty, -plegia, -scope, -scopy) opt/o ( <i>use with</i> -ic, -metrist) optic/o ( <i>use with</i> -ian)
<b>eyelid</b>	blephar/o
<b>fallopian tube</b>	salping/o, -salpinx
<b>fast</b>	tachy-
<b>fat</b>	lip/o
<b>fatty plaque</b>	ather/o
<b>female</b>	gynec/o
<b>femur</b>	femor/o
<b>fibrous tissue</b>	fibr/o
<b>fibula</b>	fibul/o, perone/o
<b>fingers</b>	dactyl/o
<b>fixation (surgical)</b>	-pexy
<b>flesh</b>	sarc/o
<b>flow</b>	-rrhea, rheumat/o
<b>fluid</b>	rheumat/o
<b>foot bones</b>	metatars/o
<b>formation</b>	-genesis, -plasia, plas/o, -plasm, -poiesis
<b>forward</b>	ante-, pro-, pros-
<b>front</b>	anter/o
<b>function</b>	physi/o
<b>gallbladder</b>	cholecyst/o
<b>gland</b>	aden/o

<b>good</b>	eu-
<b>groin</b>	inguin/o
<b>growth</b>	plas/o, -plasm
<b>hand bones</b>	metacarp/o
<b>hardening</b>	-sclerosis
<b>head</b>	cephal/o
<b>heart</b>	cardi/o ( <i>use with</i> -ac, -graphy, -logy, -logist, -megaly, -pathy, -vascular)
	coron/o ( <i>use with</i> -ary)
	calcane/o
<b>heel bone</b>	
<b>hernia</b>	-cele
<b>hip bone</b>	pelv/o
<b>hold back (to)</b>	isch/o
<b>humerus</b>	humer/o
<b>ileum</b>	ile/o
<b>ilium</b>	ili/o
<b>in, into</b>	in-, en-, endo-
<b>incision</b>	-section, -tomy
<b>infection</b>	sept/o, septic/o
<b>inflammation</b>	-itis
<b>inner</b>	en-, endo-
<b>instrument to record</b>	-graph
<b>instrument to visually examine</b>	-scope
<b>intestines (small)</b>	enter/o
<b>jejunum</b>	jejun/o
<b>joint</b>	arthr/o
<b>kidney</b>	nephr/o ( <i>use with</i> -algia, -ectomy, -ic, -itis, -lith, -logy, -megaly, -oma, -osis, -pathy, -ptosis, -sclerosis, -stomy, -tomy)
	ren/o ( <i>use with</i> -al, -gram)
<b>kidney (central section)</b>	pyel/o
<b>knowledge</b>	gnos/o
<b>large</b>	macro-
<b>larynx</b>	laryng/o
<b>lens of the eye</b>	phak/o
<b>less than normal</b>	hypo-
<b>life</b>	bi/o
<b>ligament</b>	ligament/o
<b>liver</b>	hepat/o
<b>loin</b>	lumb/o
<b>lung</b>	pneum/o ( <i>use with</i> -coccus, -coniosis, -thorax)
	pneumon/o ( <i>use with</i> -ectomy, -ia, -ic, -itis, -pathy)
	pulmon/o ( <i>use with</i> -ary)
<b>lymph</b>	lymph/o
<b>lymph node</b>	lymphaden/o
<b>lymph vessel</b>	lymphangi/o

<b>mass</b>	-oma
<b>many</b>	poly-, multi-
<b>measure (to)</b>	meter, metr/o, metry
<b>mediastinum</b>	mediastin/o
<b>medulla oblongata</b>	medull/o
<b>meninges</b>	mening/o
<b>menstruation</b>	men/o
<b>metacarpals</b>	metacarp/o
<b>metatarsals</b>	metatars/o
<b>midwife</b>	obstetr/o
<b>mind</b>	psych/o, phren/o
<b>more than normal</b>	hyper-
<b>mouth</b>	or/o ( <i>use with -al</i> )
	stomat/o ( <i>use with -itis</i> )
<b>movement</b>	-motor
<b>much</b>	poly-
<b>muscle</b>	muscul/o ( <i>use with -ar, -skeletal</i> )
	myos/o ( <i>use with -itis</i> )
	my/o ( <i>use with -algia, -ectomy, -oma, -gram, -neural</i> )
<b>nail</b>	onych/o ( <i>use with -lysis</i> ), ungu/o ( <i>use with -al</i> )
<b>narrowing</b>	-stenosis
<b>near</b>	para-
<b>neck</b>	cervic/o
<b>nerve</b>	neur/o
<b>new</b>	neo-
<b>nipple</b>	thel/o, theli/o
<b>no, not</b>	a-, an-
<b>none</b>	nulli-
<b>nose</b>	nas/o ( <i>use with -al</i> )
	rhin/o ( <i>use with -itis, -rrhea, -plasty</i> )
<b>nourishment</b>	troph/o, -trophy
<b>old age</b>	ger/o
<b>one</b>	uni-
<b>opening</b>	-stomy
<b>order</b>	norm/o
<b>out, outside</b>	ec-, ecto-, ex-, exo- extra-
<b>ovary</b>	oophor/o ( <i>use with -itis, -ectomy, -pexy, -plasty, -tomy</i> )
	ovari/o ( <i>use with -an</i> )
<b>pain</b>	-algia, -dynia
<b>painful</b>	dys-
<b>pancreas</b>	pancreat/o
<b>paralysis</b>	-plegia
<b>parathyroid gland</b>	parathyroid/o
<b>pelvis</b>	pelv/o
<b>pelvis (renal)</b>	pyel/o
<b>penis</b>	balan/o
<b>peritoneum</b>	peritone/o
<b>pertaining to</b>	-ac, -al, -an, -ar, -ary, -eal, -ic, -ine, -ior, -oid, -ous, -tic
<b>pertaining to the body</b>	-somatic

<b>phalanges</b>	phalang/o
<b>pharynx</b>	pharyng/o
<b>pituitary gland</b>	hypophys/o, pituitar/o
<b>place</b>	top/o, -stasis
<b>pleura</b>	pleur/o
<b>practitioner</b>	-ian
<b>pressure</b>	-tension
<b>process</b>	-ation, -ism, -y
<b>process of cutting into</b>	-cision, -tomy, -section
<b>process of cutting out</b>	-ectomy
<b>process of recording</b>	-graphy
<b>process of viewing</b>	-opsy
<b>produce (to)</b>	-gen, gen/o
<b>produced by</b>	-genic
<b>producing</b>	-genic, -genesis
<b>prolapse</b>	-ptosis
<b>prostate gland</b>	prostat/o
<b>puncture to remove fluid</b>	-centesis
<b>put, place (to)</b>	-thesis, top/o
<b>radius (lower arm bone)</b>	radi/o
<b>record</b>	-gram
<b>recording (process)</b>	-graphy
<b>rectum</b>	rect/o
<b>red</b>	erythr/o
<b>removal</b>	-ectomy
<b>renal pelvis</b>	pyel/o
<b>repair</b>	-plasty
<b>resection</b>	-ectomy
<b>resembling</b>	-oid
<b>retina of the eye</b>	retin/o
<b>rib</b>	cost/o
<b>rule</b>	norm/o
<b>sacrum</b>	sacr/o
<b>sagging</b>	-ptosis
<b>scapula</b>	scapul/o
<b>scrotum, scrotal sac</b>	scrot/o
<b>secrete, secretion</b>	-crine, crin/o
<b>self</b>	aut-
<b>sensation</b>	esthesi/o
<b>separation</b>	-crit, -lysis, lys/o
<b>shin bone</b>	tibi/o
<b>shoulder blade</b>	scapul/o
<b>side</b>	later/o
<b>skin</b>	cutane/o ( <i>use with -ous</i> ) derm/o ( <i>use with -al</i> ); dermat/o ( <i>use with -itis, -logy, -osis</i> )
<b>skull</b>	epitheli/o ( <i>use with -al</i> ) crani/o
<b>sliding</b>	-lapse, -listhesis
<b>slip (to)</b>	-listhesis

slow	brady-
small	micro-
small artery	arteriol/o
small bronchial tube	bronchiol/o
small intestine	enter/o
smell	osm/o
smooth muscle	leiomy/o
softening	-malacia
sound	son/o
specialist	-ist
specialist in the study of	-logist
speech	-phasia
spinal cord	myel/o
spine	spin/o
spitting	-ptysis
spleen	splen/o
stand (to)	-stasis
state of	-sis
sternum	stern/o
stomach	gastr/o
stone	lith/o, -lith
stop	-stasis, -stat
straight	orth/o
stretching	-ectasia, -ectasis
striated (skeletal) muscle	rhabdomy/o
structure	-um
study of	-logy
sugar	glyc/o
surgical puncture to remove	-centesis
fluid	
surgical repair	-plasty
surrounding	peri-
suture	-rrhaphy
swelling	-oma
tailbone	coccyg/o
tendon	tendin/o, ten/o
testicle, testis	orch/o, orchid/o, orchid/o
thigh bone	femor/o
thirst	-dipsia
throat	pharyng/o
three	tri-
through	dia-, per-, trans-
thymus gland	thym/o
thyroid gland	thyr/o, thyroid/o, thyroaden/o
tibia	tibi/o
time	chron/o
toes	dactyl/o
together	con-, syn-, sym-
tonsil	tonsill/o
too much	hyper-
too little	hypo-
tooth	dent/i, odont/o

<b>toward</b>	ad-
<b>trachea</b>	trache/o
<b>treatment</b>	iatr/o, -therapy
<b>tumor</b>	-oma, onc/o
<b>two</b>	bi-
<b>ulna</b>	uln/o
<b>under</b>	hypo-, sub-
<b>up</b>	ana-
<b>upon</b>	epi-
<b>ureter</b>	ureter/o
<b>urethra</b>	urethr/o
<b>urinary bladder</b>	cyst/o, vesic/o
<b>urinary tract</b>	ur/o
<b>urine</b>	ur/o
<b>urine condition</b>	-uria
<b>uterus</b>	hyster/o ( <i>use with</i> -ectomy, -graphy, -gram) metr/o ( <i>use with</i> -itis, -rrhagia) metri/o ( <i>use with</i> -al) uter/o ( <i>use with</i> -ine)
<b>uterus (inner lining)</b>	endometr/o, endometri/o
<b>vagina</b>	colp/o ( <i>use with</i> -pexy, -plasty, -scope, -scopy, -tomy) vagin/o ( <i>use with</i> -al, -itis)
<b>vas deferens</b>	vas/o
<b>vein</b>	phleb/o ( <i>use with</i> -ectomy, -itis, -lith, -thrombosis, -tomy) ven/o ( <i>use with</i> -ous, -gram)
<b>venule</b>	venul/o
<b>vertebra</b>	spin/o ( <i>use with</i> -al) spondyl/o ( <i>use with</i> -itis, -listhesis, -osis, -pathy) vertebr/o ( <i>use with</i> -al)
<b>vessel</b>	angi/o ( <i>use with</i> -ectomy, -dysplasia, -genesis, -gram, -graphy, -oma, -plasty, -spasm) vas/o ( <i>use with</i> -constriction, -dilation, -motor) vascul/o ( <i>use with</i> -ar, -itis)
<b>view (to)</b>	-opsy
<b>visual examination</b>	-scopy
<b>voice box</b>	laryng/o
<b>vomiting</b>	-emesis
<b>waist region</b>	lumb/o
<b>water</b>	hydr/o
<b>weight</b>	bari/o
<b>white</b>	leuk/o
<b>widening</b>	-ectasia, -ectasis
<b>windpipe</b>	trache/o
<b>with</b>	con-, syn-, sym-
<b>within</b>	en-, endo-, intra-
<b>woman</b>	gynec/o
<b>wrist bones</b>	carp/o
<b>x-ray</b>	radi/o

# English → Spanish Terms\*

---

\*Diagrams of the body labeled with Spanish terms are on pages [410](#) and [411](#).

Here is a list of **English → Spanish terms** that will help you communicate with Spanish-speaking patients in offices, hospitals, and other medical settings. Included are parts of the body and other medical terms as well.

<b>abdomen</b>	abdomen (ahb-DOH-mehn)
<b>acne</b>	acné (ahk-NEH)
<b>acoustic</b>	acústico (ah-KOOS-tee-ko)
<b>adenoid</b>	adenoides (ah-deh-NOH-ee-deh)
<b>amebic</b>	améxico (ah-MEH-bee-ko)
<b>analgesic</b>	analgésico (ah-nahl-HEH-see-koh)
<b>anemia</b>	anemia (ah-NEH-mee-ah)
<b>anesthesia</b>	anestesia (ah-nehs-TEH-see-ah)
<b>angina</b>	angina (ahn-HEE-na)
<b>angioma</b>	angioma (ahn-hee-OH-mah)
<b>ankle</b>	tobillo (toh-BEE-yoh)
<b>antacid</b>	antiácido (ahn-tee-AH-see-doh)
<b>antiarrhythmic</b>	antiarrítmico (ahn-tee-ah-RREET-mee-koh)
<b>antibiotic</b>	antibiótico (ahn-tee-bee-OH-tee-koh)
<b>anticonvulsant</b>	anticonvulsivante (ahn-tee-kohn-bool-SEE-ban-teh)
<b>antidiarrheal</b>	antidiarrético (ahn-tee-dee-ah-RREH-tee-koh)
<b>antiemetic</b>	antiemético (ahn-tee-eh-MEH-tee-koh)
<b>antiepileptic</b>	antiepiléptico (ahn-tee-eh-pee-LEHP-tee-koh)
<b>antihistamine</b>	antihistamínico (ahn-tee-ees-tah-MEE-nee-koh)
<b>antiviral</b>	antivirus (ahn-tee-BEE-roos)
<b>anus</b>	ano (AH-no)
<b>appendix</b>	apéndice (ah-PEHN-dee-seh)
<b>arm</b>	brazo (BRAH-soh)
<b>armpit</b>	axila (ahk-SEE-lah)
<b>arteriogram</b>	arteriograma (ahr-teh-ree-oh-GRAH-mah)
<b>arthritis</b>	artritis (ahr-TREE-tees)
<b>asthma</b>	asma (AHS-mah)
<b>bacteria</b>	bacteria (bahk-TEH-ree-ah)
<b>barbiturates</b>	barbitúricos (bahr-bee-TOO-ree-kohs)
<b>birthmark</b>	lunar (loo-NAHR)
<b>bleeding</b>	sangrado (sahn-GRAH-doh)
<b>blood</b>	sangre (SAHN-greh)
<b>blood count</b>	biometría hemática (bee-oh-meh-TREE-ah eh-MAH-tee-kah)
<b>bradycardia</b>	bradicardia (brah-dee-KAHR-dee-ah)
<b>brain</b>	cerebro (seh-REH-bro)
<b>breast/chest</b>	seno (SEH-noh), pecho (PEH-choh)
<b>bronchial tube</b>	bronquio (BROHN-kee-oh)
<b>bronchitis</b>	bronquitis (brohn-KEE-tees)
<b>bruises</b>	moretones (moh-reh-TOH-nehs)
<b>burn</b>	quemadura (keh-mah-DOO-rah)
<b>buttocks</b>	nalgas (NAHL-gahs)

<b>calf</b>	pantorrilla (pahn-toh-RREE-yah)
<b>callus</b>	callo (KAH-yoh)
<b>calm</b>	calma (KAHL-mah)
<b>cardiac</b>	cardiaco (kahr-DEE-ah-koh)
<b>cataract</b>	catarata (kah-tah-RAH-tah)
<b>cervix</b>	cuello uterino (KOO-eh-yoh) (oo-teh-RREE-noh), cerviz (SERH-bees)
<b>chancre</b>	chancro (CHAHN-kroh)
<b>cheek</b>	mejilla (meh-HEE-yah)
<b>chemotherapy</b>	quimioterapia (kee-mee-oh-teh-RAH-pee-ah)
<b>chin</b>	barbilla (bar-BEE-yah)
<b>cholesterol</b>	colesterol (koh-lehs-teh-ROHL)
<b>cirrhosis</b>	cirrosis (see-RROH-sees)
<b>claustrophobia</b>	claustrofobia (klah-oos-troh-FOH-bee-ah)
<b>coagulation</b>	coagulación (koh-ah-goo-lah-see-OHN)
<b>collar bone</b>	clavícula (klah-VEE-kuh-la)
<b>colon</b>	colon (KOH-lohn)
<b>constipation</b>	estreñimiento (ehs-treh-nyee-mee-EHN-toh)
<b>cortisone</b>	cortisona (kohr-tee-SOH-nah)
<b>cough</b>	tos (tohs)
<b>cyanotic</b>	cianótico (see-ah-NOH-tee-ko)
<b>decongestants</b>	descongestionantes (dehs-kohn-hehs-tee-oh-NAHN-tehs)
<b>dehydrated</b>	deshidratado (deh-see-drah-TAH-doh)
<b>delirious</b>	delirio (deh-LEE-ree-oh)
<b>depressed</b>	deprimido (deh-pree-MEE-doh)
<b>diabetes</b>	diabetes (dee-ah-BEH-tehs)
<b>diarrhea</b>	diarrea (dee-ah-RREH-ah)
<b>digitalis</b>	digital (dee-hee-TAHL)
<b>ear (inner)</b>	oído (oh-EE-do)
<b>ear (outer)</b>	oreja (oh-REH-hah)
<b>ecchymosis</b>	equimosis (eh-kee-MOH-sees)
<b>eczema</b>	eccema (ehk-SEH-mah)
<b>elbow</b>	codo (KOH-doh)
<b>embolism</b>	embolia (ehm-boh-LEE-ah)
<b>emetic</b>	emético (eh-MEH-tee-koh)
<b>enteritis</b>	enteritis (ehn-teh-REE-tees)
<b>epilepsy</b>	epilepsia (eh-pee-LEHP-see-ah)
<b>euphoric</b>	eufórico (eh-oo-FOH-ree-koh)
<b>exudate</b>	exudado (ehk-soo-DAH-doh)
<b>eye</b>	ojo (OH-hoh)
<b>eyebrow</b>	ceja (SEH-hah)
<b>eyelash</b>	pestaña (pehs-TAH-nyah)
<b>eyelids</b>	párpados (PAHR-pah-dohs)

<b>fibroid</b>	-fibroma (fee-BROH-mah)
<b>finger</b>	dedo (DEH-doh)
<b>finger nail</b>	uña (OO-nyah)
<b>fist</b>	puño (POO-nyoh)
<b>fistula</b>	fístula (FEES-too-lah)
<b>foot</b>	pie (pee-EH)
<b>forearm</b>	antebrazo (an-teh-BRAH-zoh)
<b>forehead</b>	frente (FREN-teh)
<b>fungus</b>	hongo (OHN-goh)
<b>gallbladder</b>	vesícula biliar (beh-SEE-koo-lah bee-lee-AHR)
<b>gangrene</b>	gangrena (gahn-GREH-nah)
<b>gastroenteritis</b>	gastroenteritis (gahs-troh-ehn-teh-REE-tees)
<b>gastroenterology</b>	gastroenterología (gahs-troh-ehn-teh-roh-loh-HEE-ah)
<b>genital organs</b>	órganos genitales (ORH-gah-nohs heh-nee-TAH-lehs)
<b>glaucoma</b>	glaucoma (glah-oo-KOH-mah)
<b>groin</b>	ingle (EEN-gleh)
<b>gums</b>	encías (ehn-SEE-ahs)
<b>gynecologist</b>	ginecólogo (hee-neh-KOH-loh-goh)
<b>hair</b>	cabello (kah-BEH-yoh)
<b>hand</b>	mano (MAH-noh)
<b>head</b>	cabeza (kah-BEH-sah)
<b>heart</b>	corazón (koh-rah-SOHN)
<b>heel</b>	talón (tah-LOHN)
<b>hematology</b>	hematología (eh-mah-toh-loh-HEE-ah)
<b>hematoma</b>	hematoma (eh-mah-TOH-mah)
<b>hemolysis</b>	hemólisis (eh-MOH-lee-sees)
<b>hemorrhage</b>	hemorragia (eh-moh-RRAH-hee-ah)
<b>hepatitis</b>	hepatitis (eh-pah-TEE-tees)
<b>hernia</b>	hernia (EHR-nee-ah)
<b>hip</b>	cadera (kah-DEH-rah)
<b>hypertension</b>	hipertensión (ee-pehr-tehn-see-OHN)
<b>icteric</b>	ictérico (eek-TEH-ree-koh)
<b>infection</b>	infección (een-fehk-see-OHN)
<b>inflammation</b>	inflamación (een-flah-mah-see-OHN)
<b>insulin</b>	insulina (een-soo-LEE-nah)
<b>intestine</b>	intestino (een-tes-TEE-noh)
<b>intramuscular</b>	intramuscular (een-trah-moos-koo-LAHR)
<b>intravenous</b>	intravenoso (een-trah-beh-NOH-soh)
<b>irradiate</b>	irradiar (ee-rrhah-dee-AHR)
<b>jaw</b>	mandíbula (mahn-DEE-boo-lah)
<b>kidney</b>	riñón (ree-NYON)
<b>knee</b>	rodilla (ro-DEE-yah)

<b>laparoscopy</b>	laparoscopia (lah-pah-rohs-KOH-pee-ah)
<b>laryngitis</b>	laringitis (lah-reen-HEE-tees)
<b>laxative</b>	laxante (lahk-SAHN-teh)
<b>left</b>	izquierdo (ees-kee-EHR-doh)
<b>leg</b>	pierna (pee-EHR-nah)
<b>ligament</b>	ligamento (lee-gah-MEHN-toh)
<b>lingual</b>	lingual (leen-GUAHL)
<b>lip</b>	labio (LAH-bee-oh)
<b>lithium</b>	litio (LEE-tee-oh)
<b>liver</b>	hígado (EE-gah-doh)
<b>low cholesterol</b>	bajo colesterol (bah-hoh koh-lehs-teh-ROHL)
<b>low fat</b>	bajo grasa (bah-hoh GRAH-sah)
<b>low sodium</b>	bajo sodio (bah-hoh soh-dee-oh)
<b>lung</b>	pulmón (pool-MOHN)
<b>meningitis</b>	meningitis (meh-neen-HEE-tees)
<b>morphine</b>	morfina (mohr-FEE-nah)
<b>mouth</b>	boca (BOH-kah)
<b>muscle</b>	músculo (MOOS-koo-loh)
<b>narcotics</b>	narcóticos (nahr-KOH-tee-kohs)
<b>nasal</b>	nasal (nah-SAHL)
<b>nausea</b>	náusea (NAH-oo-seh-ah)
<b>navel</b>	ombligo (ohm-BLEE-goh)
<b>neck</b>	cuello (koo-EH-yoh)
<b>neonatal</b>	neonatal (neh-oh-nah-TAHL)
<b>nephrologist</b>	nefrólogo (neh-PHROH-lo-goh)
<b>nephrology</b>	nefrología (neh-phroh-lo-HEE-ah)
<b>nervous</b>	nervioso (nehr-bee-OH-soh)
<b>neurotic</b>	neurótico (neh-oo-ROH-tee-koh)
<b>nipple</b>	pezón (peh-SOHN)
<b>nitroglycerin</b>	nitroglicerina (nee-troh-gee-seh-REE-nah)
<b>nose</b>	nariz (nah-REES)
<b>nostrils</b>	fosas nasales (foh-SAHS na-SAH-lehs)
<b>Novocain</b>	novocaína (noh-boh-kah-EE-nah)
<b>nuclear medicine</b>	medicina nuclear (meh-dee-SEE-nah NOO-kleh-ahr)
<b>obstetrics</b>	obstetricia (ohbs-teh-TREE-see-ah)
<b>oncology</b>	oncología (ohn-koh-loh-HEE-ah)
<b>ophthalmic</b>	oftálmico (ohf-TAHL-mee-koh)
<b>ophthalmology</b>	oftalmología (ohf-tahl-moh-loh-HEE-ah)
<b>optic</b>	óptico (OHP-tee-koh)
<b>orthopedics</b>	ortopedia (ohr-toh-PEH-dee-ah)
<b>orthopedic surgeon</b>	cirujano ortopédico (see-roo-HAH-noh ohr-toh-PEH-dee-koh)
<b>otic</b>	ótico (OH-tee-koh)
<b>ovary</b>	ovario (oh-BAH-ree-oh)

<b>palate</b>	paladar (pah-lah-DAHR)
<b>palpation</b>	palpación (pahl-pah-see-OHN)
<b>palpitation</b>	palpitación (pahl-pee-tah-see-OHN)
<b>pancreas</b>	páncreas (PAHN-kreh-ahs)
<b>pancreatitis</b>	pancreatitis (pahn-kreh-ah-TEE-tees)
<b>paralytic</b>	paralítico (pah-rah-LEE-tee-koh)
<b>pathogen</b>	patógeno (pah-TOH-hen-oh)
<b>pathologic</b>	patológico (pah-toh-LOH-hee-koh)
<b>pathology</b>	patología (pah-toh-loh-HEE-ah)
<b>pediatrics</b>	pediatría (peh-dee-ah-TREE-ah)
<b>pelvis</b>	pelvis (PEHL-bees)
<b>penis</b>	pene (PEH-neh), miembro viril (mee-EHM-broh vee-REEL)
<b>pneumonia</b>	pulmonía/neumonía (pool-moh-NEE-ah/neh-oo-moh-NEE-ah)
<b>pruritic</b>	prurito (proo-REE-toh)
<b>psoriasis</b>	psoriasis (soh-ree-AH-sees)
<b>psychiatrist</b>	psiquiatra (see-kee-AH-trah)
<b>psychiatry</b>	psiquiatría (see-kee-ah- TREE-ah)
<b>psychologist</b>	psicólogo (see-KOH-loh-goh)
<b>pubic</b>	púbico (POO-bee-koh)
<b>pyorrhea</b>	piorrea (pee-oh-RREH-ah)
<b>radiologist</b>	radiólogo (rah-dee-OH-loh-goh)
<b>radiology</b>	radiología (rah-dee-oh-loh-HEE-ah)
<b>rectum</b>	recto (REHK-toh)
<b>rheumatic</b>	reumático (reh-oo-MAH-tee-koh)
<b>rib</b>	costilla (kohs-TEE-yah)
<b>right</b>	derecho (deh-REH-choh)
<b>roseola</b>	roseola (roh-seh-OH-lah)
<b>rubella</b>	rubéola (roo-BEH-oh-lah)
<b>scalp</b>	cuero cabelludo (KOO-eh-roh kah-beh-YOO-doh)
<b>sebaceous</b>	sebáceo (seh-BAH-seh-oh)
<b>sedatives</b>	sedativos/sedantes (seh-dah-TEE-bohs/seh-DAHN-tehs)
<b>shin</b>	espinilla (ehs-pee-NEE-yah), canilla (kah-NEE-yah)
<b>shoulder</b>	hombro (OHM-bro)
<b>skin</b>	piel (pee-EHL)
<b>skull</b>	cráneo (KRAH-ne-oh)
<b>spinal column</b>	columna vertebral (koh-LUHM-nah behr-teh-BRAHL)
<b>spleen</b>	bazo (BAH-soh)
<b>stethoscope</b>	estetoscopio (ehs-teh-tohs-KOH-pee-oh)
<b>stomach</b>	estómago (ehs-TOH-mah-goh)
<b>stool sample</b>	muestra – fecal (moo-EHS-trah -feh-KAHL)
<b>straight</b>	derecho (deh-REH-choh)
<b>subaxillary</b>	subaxilar (soob-AHK-see-lahr)
<b>subcutaneous</b>	subcutáneo (soob-koo-TAH-neh-oh)
<b>sublingual</b>	sublingual (soob-LEEN-goo-ahl)
<b>substernal</b>	subesternal (soob-ehs-TEHR-nahl)

<b>surgeon</b>	cirujano (see-roo-HAH-noh)
<b>surgery</b>	cirugía (see-roo-HEE-ah)
<b>symptoms</b>	síntomas (SEEN-toh-mahs)
<b>syncope</b>	síncope (SEEN-koh-peh)
<b>systole</b>	sístole (SEES-toh-leh)
<b>teeth</b>	dientes (dee-EHN-tehs)
<b>temple</b>	sien (see-EHN)
<b>testicles</b>	testículos (tehs-TEE-koo-lohs)
<b>tetanus</b>	tétano (TEH-tah-noh)
<b>therapy</b>	terapia (teh-RAH-pee-ah)
<b>thigh</b>	muslo (MOOS-loh)
<b>throat</b>	garganta (gahr-GAHN-tah)
<b>thumb</b>	pulgar (POOL-gahr)
<b>thyroid</b>	tiroide (tee-ROY-deh)
<b>toes</b>	dedos (DEH-dos), del pié (dehl PEE-eh)
<b>tongue</b>	lengua (LEHN-goo-ah)
<b>tonsillitis</b>	tonsilitis/amigdalitis (tohn-see-LEE-tees/ah-meeg-dah-LEE-tees)
<b>tonsils</b>	amígdalas (ah-MEEG-da-las)
<b>ulcer</b>	úlceras (OOL-seh-rah)
<b>ulnar</b>	ulnar (OOL-nahr)
<b>ultrasound</b>	ultrasonido (ool-trah-soh-NEE-doh)
<b>uremia</b>	uremia (oo-REH-mee-ah)
<b>urinary bladder</b>	vejiga (beh-HEE-gah)
<b>urine</b>	orina (oh-REE-nah)
<b>urticaria</b>	urticaria (oor-tee-KAH-ree-ah)
<b>uterus</b>	útero (OO-teh-roh)
<b>uvula</b>	úvula (OO-boo-lah)
<b>vaginitis</b>	vaginitis (bah-hee-NEE-tees)
<b>vagus</b>	vago (BAH-goh)
<b>valve</b>	válvula (BAHL-boo-lah)
<b>varicocele</b>	varicocele (bah-ree-koh-SEH-leh)
<b>vertigo</b>	vértigo (BEHR-tee-goh)
<b>waist</b>	cintura (sin-TOO-rah)
<b>womb</b>	vientre (bee-EHN-treh)
<b>wrist</b>	muñeca (moo-NYEH-kah)
<b>x-rays</b>	rayos equis (rah-YOHS EH-kees)
<b>zygomatic</b>	cigomático (see-goh-MAH-tee-koh)

# Index

## A

abbreviations, comprehensive list of, 318–328  
  cardiovascular system, 216  
  digestive system, 224  
  ears/hearing, 279  
  endocrine system, 232  
  eyes/vision, 278  
  female reproductive system, 238  
  male reproductive system, 248  
  musculoskeletal system, 253  
  urinary system, 285

abdomen, 59  
  CT scan of, 226  
  laparotomy and, 12, 12*f*, 46  
  MRI of, 226  
  ultrasonography for, 226

abdominal cavity, 51, 53

abdominal pain, 189

abdominocentesis (paracentesis), 310

ABG (arterial blood gas), 272

Achilles tendon, 255*f*, 331

acid phosphate tests, 296

acid reflux, 189

ACL (anterior cruciate ligament), 258

acquired immunodeficiency syndrome (AIDS), 147*t*, 174, 245–246

acromegaly, 233

acronyms, comprehensive list of, 329–330

ACS (acute coronary syndrome), 219

ACTH (adrenocorticotropic hormone), 136*t*, 234

acute conditions, 95

acute coronary syndrome (ACS), 219

acute myocardial infarction (AMI), 219

acute myocardial ischemia, 184

acute renal failure (ARF), 287

Page numbers followed by “*f*” indicate figures, “*t*” indicate tables, and “*s*” indicates spotlights.

acute respiratory distress syndrome (ARDS), 272

AD (Alzheimer disease), 264–265, 331

adductor magnus, 254*f*–255*f*

adenectomy, 99*t*

adenitis, 5

adenocarcinoma, 46, 91, 91*f*

adenoidectomy, 99*t*

adenoids, 97*f*, 269*f*  
  excision of, 99*t*

adenoma, 5, 91

adenopathy, 93*t*

adjective suffixes, 94–95

adrenal glands, 7*f*, 46, 232*f*, 285*f*  
  diseases of, 93*t*  
  hormones of, 136*t*  
  location of, 133*f*

adrenaline (epinephrine), 136*t*

adrenocorticotropic hormone (ACTH), 136*t*, 234

adrenopathy, 93*t*

AED (automated external defibrillator), 219

AFP (alpha-fetoprotein) tests, 297

AIDS (acquired immunodeficiency syndrome), 147*t*, 174, 245–246

air sacs (alveoli), 269*f*

alanine transaminase (ALT), 227, 296

albumin tests, 296

albuminuria, 286

alkaline phosphatase tests, 227, 296

allergists, 177*t*

allergy tests, 281, 296

allied health careers, 340–348

alopecia, 280

alpha-fetoprotein (AFP) tests, 296

ALT (alanine transaminase), 227, 296

alveoli (air sacs), 269*f*

Alzheimer disease (AD), 264–265, 331

ambulatory electrocardiography. *See* Holter monitoring

- amenorrhea, 132, 239  
 AMI (acute myocardial infarction), 219  
 amniocentesis, 97*f*, 240, 296  
 amnion sac, 240  
 ANA (antinuclear antibody) tests, 257–258, 296  
 analysis of urine, 133  
 anastomoses, 103, 104*f*, 128, 227  
 anemias, 18, 46, 132, 132*t*, 186, 189  
 anesthesiologists, 177*t*  
 anesthesiology, 176  
 aneurysm, 217  
 angina, 184, 217  
 angiography, 100, 218  
   cerebral, 265, 297

   digital subtraction, 303  
   fluorescein, 281, 305  
   magnetic resonance, 308  
   pulmonary, 271, 311  
 angioplasty, 102, 102*f*, 219  
 ankylosing spondylitis, 257  
 anterior, definition of, 56–57, 59, 60*t*  
 anterior cruciate ligament (ACL), 258  
 antiarrhythmic drugs, 184  
 antibiotics, 134, 174  
 antibody, 62, 133, 174, 183*s*  
 anticoagulant drugs, 184  
 antigens, 133, 174  
 antihypertensive medications, 193  
 antinuclear antibody (ANA) tests, 257–258, 297  
 anuria, 286  
 anus, 52*f*, 182*f*, 224*f*  
 aorta, 84, 95*f*, 148*f*, 190, 216*f*  
 apex/apices, 10*t*  
 Apgar score, 331  
 aphasia, 132  
 aplastic anemia, 132*t*  
 apnea, 132  
 appendectomy, 99*t*, 227  
 appendicitis, 90*t*  
 appendix, 224*f*  
   excision of, 99*t*  
 ARDS (acute respiratory distress syndrome), 272  
 areola, 238*f*  
 ARF (acute renal failure), 287  
 armpit (axillary) lymph nodes, 180, 244*f*  
 arrhythmias, 217–218  
   ventricular, 184  
 arterial blood gas (ABG), 272  
 arteries, 216*f*  
 arteriography, 297  
 arterioles, 216*f*  
 arteriosclerosis, 94, 95*f*  
 arteriovenous fistula, 193, 193*f*  
 arthralgia, 15  
 arthritis, 5  
   ankylosing spondylitis, 257  
   gouty, 257  
   osteoarthritis, 13, 13*f*, 183*s*  
   rheumatoid, 183*s*, 183*f*, 257  
 arthrocentesis, 96, 257, 297  
 arthrography/arthrogram, 15, 257, 297  
 arthroplasty, 258  
 arthroscopy, 17, 136*t*, 257  
   of knee, 18*f*  
 ascites, 52*s*, 62, 63*f*  
 aspartate transaminase (AST) tests, 227, 297  
 Asperger syndrome, 331  
 asphyxia, 271  
 aspiration, 240, 297  
 AST (aspartate transaminase) tests, 227, 297  
 asthma, 271  
 atelectasis, 271  
 atheroma, 94  
 atherosclerosis, 94, 95*f*, 217  
 atrophy, 132, 138, 139*f*, 183*f*  
   of bone, 183*f*  
 audiologists, 340  
 audiometry, 297  
 auditory canal, 279  
 auditory nerve, 279  
 auras, with migraines, 194  
 auscultation, 297  
 autoimmune diseases  
   antibodies and, 183*s*

- small intestine, 8f, 9, 52f
- Snellen test, 334
- SOB (shortness of breath),  
272
- sodium (Na<sup>+</sup>), 234
- sodium level tests, 312
- soft tissue, swelling of, 183f
- soleus, 254f–255f
- sonography. *See*  
ultrasonography
- spasm, coronary artery, 184,  
184f
- speculum, vaginal, 17f
- speech-language  
pathologists, 348
- sperm, 7, 248f
- spinal cavity, 52–53, 54f
- spinal column, 52, 54  
divisions of, 54, 55f, 84
- spinal cord, 52, 84  
anatomy of, 263f  
myelograms for, 99, 128  
surrounding anatomy and  
structures of, 90f
- spinal nerves, 263f
- spinal tap (lumbar  
puncture), 62, 62f, 265,  
308
- spirometers, 271
- spleen, 8f, 99f, 244f  
excision of, 99t
- splenectomy, 99t, 128
- sputum tests, 271, 312
- Staphylococcus aureus*, 164
- STDs (sexually transmitted  
diseases), 241
- stents, arterial, 102, 102f,  
184, 219
- stereotactic breast biopsies,  
308
- stereotactic radiosurgery,  
265
- sternocleidomastoid,  
254f–255f
- sternum, 253f
- STIs (sexually transmitted  
infections), 241, 249
- stomach, 8f, 10, 52f, 224f  
excision of, 99t  
subtotal gastrectomy of,  
146
- stomas, 103, 104f
- stool culture, 227, 312
- stool guaiac tests. *See*  
Hemoccult tests
- stress tests, 218, 312
- stroke (cerebrovascular  
accident), 6, 6s, 95, 128,  
264
- stye, 281
- subcutaneous tissue, 277
- subdural hematomas, 137f
- subhepatic, 20
- subluxation, of joints, 183f
- subserosal masses, 92f
- subtotal gastrectomy, 146
- subtotal hysterectomy, 96
- suffixes, 2–4  
adjective, 94–95  
combining forms and,  
86–87  
commonly confused, 135s  
definition of, 2  
diagnostic, 87–95  
forming plural, 10t  
list of common, 15–17  
prefixes and, 130–131  
procedural, 96–105  
roots of words in, 18s  
terminology and, 87–105
- superficial, definition of,  
60t
- superior, definition of, 60t
- supine, definition of, 60t
- surfactant, 142f
- surgery, 176
- surgical intensive care unit  
(SICU), 141s
- surgical technologists (CSTs),  
348
- swallowing process, 63f
- sweat glands, 46, 277
- symbols, comprehensive list  
of, 330
- symptoms, remission and  
relapse of, 145, 174
- syncope, 264
- syndromes, 146, 147t, 174
- syphilis, 249
- systemic circulation, 216f
- systems. *See* body systems

## T

- T3 (triiodothyronine), 234,  
314
- T4 (thyroxine), 136t, 234,  
314
- T&A. *See* tonsillectomy and  
adenoidectomy
- TAH. *See* total abdominal  
hysterectomy
- TAH-BSO (total abdominal  
hysterectomy with  
bilateral salpingo-  
oophorectomy), 241

ELSEVIER

## Additional resources for the classroom and beyond!

[evolve.elsevier.com/Chabner/MedTermShort](http://evolve.elsevier.com/Chabner/MedTermShort)

### Study Tools

#### Student Resources on Evolve

Online learning tools help you succeed in your coursework and on exams.

- Audio Terms pronounced and defined
- Quizzes and Practice Exams
- *Body Spectrum Electronic Anatomy Coloring Book*
- Medical animations
- Electronic flash cards
- *Medical Millionaire* game
- *Tournament of Terminology* game
- Interactive exercises, accessible to all

**Included with your textbook!**

#### Medical Language Instant Translator, 6th Edition

*Davi-Ellen Chabner, BA, MAT*

This pocket-sized reference equips you with the tools needed to analyze medical terms, form medical plurals, and identify the leading prescription drugs. It also provides quick access to common clinical tests, diagnoses, and procedures.

2017 • 356 pp., illustd.  
ISBN: 978-0-323-37843-7

*Sold separately.*

### Educator Support

#### Educator Resources on Evolve

Save class preparation time and teach more effectively with the TEACH Lesson Plan Manual and other online resources.

- Customizable lesson plans
- PowerPoint® lecture slides
- Test bank with more than 650 questions
- Instructor's Manual
- Classroom Handouts

**FREE with qualified adoptions!**
